Earl,
There is a problem with some new 895's being received from the
factory with all the lockouts full for some reason. You can reset the
scanner and solve the problem by turning the scanner off then turn it
back on while simultaneously pressing E, 2, 9. (I think those are the
correct keys. I'll find out for sure and let you know.)

Bob,
I sure wish I could confirm this mod as I have a BC890 too. I would
however like to hear more about this virtual down conversion. I'm
looking for the cell mods for this scanner too obviously. Let's keep
each other informed !!!!!

Actually, there is no exam needed to buy a VX-1R. His bigger problem is that the Family Radio
Service does not operate anywhere in the "465.xxx" Mhz of frequency.

DIRTYRENCH wrote:
>
> NEED FREEBAND FREQUENCIES AND CORRESPONDING CHANNEL NUMBERS FOR CHANNELS
> 41-85...HAVE THE LOWERS..JUST NEED UPPERS TO MAKE MY AOR3000 COMPLETE!

Typically, folks use the first two decimal places of the actual
frequency to indicate the channel number.

ie:

27.405 is channel 40 (legal)
^^
27.415 is channel 41 (not legal in all countries)

all the way up to....

27.995 is channel 99 (ditto)

28.000 is getting into the weak signal, beacon and CW portion of the 10m
ham band. It's probably in your best interest not to transmit there!

Bear in mind that these frequencies are not necessarily legal for use
where you are. Or anywhere for that matter!! 8-)

Cheers!

I have a PRO-51, and the Lo Batt indicator works fine for me,
using both Nicads and alkalines. On nicads, though, the warning I get
before the scanner goes dead is a lot shorter (we're talking on the order
of about 30 seconds to a minute), while the battery warning on alkalines
is annoyingly long (30 minutes or so).

It might just be that on some models, the threshold for setting off the
indicator is lower than on others (and too low for it to work on nicads).

> here on the air guage ."

The Rear End Devices (Also called RED's, or End of Train Devices (EOT's))
transmit a data burst on 457.9375, that unless you can understand ASCII
won't sound any different from a "Good" indication when the train goes into
Emergency.

BTW, NS trains use 161.115 for RED's, and the format is DTMF (Touchtone). A
couple smaller roads or industrial lines like the Erie Mining or whatever
it is called now use different channels, but all mainline roads except NS
use 457.9375. Some railroads use 452.9375 to allow the engine consist to
talk to the RED, and start brake applications from the rear.

Vic Rea has a good book on Railroad radio operations that will explain in
greater detail about this application of radio in railroad operations.
Look to WWW.Amazon.com or in the various radio and train mags for more on
his book.

Restores cellular to your scanner!

I have a GRE Super Converter 9001 for sale. This converter allows base scanners to tune in those blocked frequencies in the 810MHz - 950MHz range.

This converter is very simple to use, It connects between your antenna and radio and has a bypass switch for normal scanning.
You simply scan between 410MHz and 550MHz to tune in all the frequencies in the 810MHz - 950MHz range.
I am also including the optional wall adapter.

The price is $60 plus $5 shipping.

It is caused by the signals being being reflected off parked cars then multiplied by the number of buildings. These signals are referred to as carmonics.

I have the following radios for sale and would perfer to sell
them in a
package. However, any offers will be considered.

1. Motorola UHF Spectra mobile. and programming cable
2. Motorola vhf Maxtrac 32 channel mobile and programming
cable
with DTMF mic., regular mic. and external speaker.
3. ICOM IC 737 General coverage HF rig with touch tone mic
and tone.
4. ICOM IC W2a dual band 2m/440 portable and sspeaker mic.
(No battery or Charger)
5. Yaesu FT 23R 2m portable.
6. Dual band 2m/440 magnet mount mobile ant.

All radios are cosmetically perfect and in perfect working order.
Would like to get $2000 for entire package. I am getting out of the
hobby.
If you are interested please E-Mail radio3@idt.net

The BNSF detector near me (MP 154.7 on the San Bernardino Sub)
initially gave train speeds, but after about a week this feature was
deactivated apparently.

I wonder why?

I've got two defect detectors I pick up on 161.070 for the Niagara
Branch of Conrail near Niagara Falls.
I don't know if I'm talking the same units as you because these only
say " Conrail,.... Wheatfield,......New York,.....no
defects,......total axle count (4 to whatever),......over ." If
there's a problem, it will indicate if it's draging brakes or draging
equipment (air hoses), or junk caught underneath and how many axles
to the rear.
But it;s a fairly new addition here within the last 4 or 5 years
(I think).
Although they have telemetry devices (which give air pressure and
train length) on some trains, I've never heard any transmissions from
these devices even when they go into emergency due to a broken air
hose or knuckle. Although I did hear an engineer telling the
conductor as he was walking back that " it must be closer to the rear
because the pressure drop showed up on the telemetry before it did up
here on the air guage ."
(In the winter there's a crossing in North Tonawanda that
habitually un-couples the hoses because of snow and ice buildup)
We get a lot of Canadian Pacific's renting track time through here
too as it's a short-cut for them.

I.m rambling on ! Sorry !

Thanks. That fixed it. I keyed in six banks of trunked frequencies
for the second time in two days and now it works just fine.

Any idea why the scanner was shipped this way? Was this a side-effect
of some pre-ship testing procedure? Shouldn't unlocking all locked out
IDs have fixed the problem?

>Please help me - I am so undecided!

Help you spend you money? Sure. The differences between these two scanners are many--these are completely two different animals--and there is no way you can say this one is better than that one. A sportscar is faster than a jeep on the highway; but if you want to go across the desert, you better take the jeep. You have to decide if you want to use it at home or take it with you. That's what it boils down to ultimately.

if your 895 still says FULL when trying to L/O-- you will have to seset the radio. Quitea few radios had to be reset because of this problem. Be warned--you will lose ALL MEMORY---.

while turning the radio on,, depress and hold MANUAL,2,9, at the same time.

3405. DeKalb County, Georgia trunked system

Newsgroup: rec.radio.scanner
Date: 1997-11-06 00:00:00 UTC
From: earl@airwolf.oit.gatech.edu
Message-ID: <63slm3$bmv@smash.gatech.edu>
Source record: 181145

Does anyone have a more up-to-date list of frequencies for the DeKalb county trunked system? Below is the list that I got from www.mindspring.com/~mm505 and it agrees with a search that I did on perconcorp.com for KNAN828. The reason I believe that I'm missing some frequencies is because my trunk tracker can't find a data channel in the list below. It just searches endlessly, but never finds one. It worked two days ago, but not yesterday or today. That would make sense because they usually change the data channel each day.

This trunked system doesn't appear nearly as uniform as most. I would expect .2625, .7125, 8625 added to 852, 853, 854, 855, etc. instead of the relatively random collection below. I guess it's possible that they added more channels to the same trunkes group under a callsign other than KNAN828.

KNAN828

852.2875 852.8125

853.3125 853.8625

854.2625

855.7125

856.7125 856.9625

857.2625 857.7125 857.9625

858.2625 858.7125 858.9625

859.2625 859.7125 859.9625

860.2625 860.7125 860.8625

Greg Knox: You live in Atlanta, don't you? I assume you have the authoritative list of every trunked freq and ID in use in the metro area. Any hints?

PRO90 is the SAME as Uniden's BC-235. Uniden built it for Radio
Shack. The PRO90 does NOT come with 2 battery packs and the charging
cradle. The BC-235 is a better deal. Pay less and get more.

Good Luck

Mine comes on for about an hour before it starts beeping. After the beeps, I still have about 5 minutes continuous use left before it dies. I usually wait until the beeps before changing the batteries. I mostly use mine with earplugs, so that may account for the difference, too.

To answer your last question.... U.K frequencies for ETAC`s are aboyt
917.00 -- 949.9875
They are not removed from any scanners that i know...
I use the hand-held AR8000 It scans 100Mhz - 1950Mhz
With no gaps...

Is there a message hidden in all this garbage somewhere? Is the above
post in morse code or something? All I see are dashes, dots, and other
weird characters.

> You sure about that? I don't see why it would be directional if mounted
> vertically.

The original question as regarding a TV antenna with a rotator. This would lead one to beleive it was a directional antenna, probably an LPDA like most.

They are usually horizontal for TV reception. But if you wanted to use it as a scanner antenna it would be best to use it vertically since that is the way land mobile stations are typically set up.

The CB guy probably meant to say drill new holes in the boom, not the mast, in order to remount the antenna vertically. However you need to be careful - the boom on many LPDAs is part of antenna feed and you don't want to short it to anything. Still, on a lot of TV antennas the boom is isolated and the elements are "driven" by crisscrossed wire along the boom - don't short'em.

> >Which end or side do you point toward the source?

> Beats me. I thought it would be omnidirectional.

If its an LPDA then you point it like a yagi - the small elements toward toward the source. An LPDA won't have the gain or front/back that a yagi has, but the offer wide bandwidth in a pretty small package.

Regards

>software and cable ? I've been checking
>on ScannerMaster's home page, but
>they haven't done an update for months

Just found out from Scan*Star's web site that they are now supporting the BC895xlt. They have fairly extensive descriptions of the packages with screen shots. I haven't had a chance to read through it yet but it doesn't look too bad. No BC895xlt specifics yet though, they only state that it is supported.

Check out http://www.scanstar.com

I think it is very "on-topic." These people are discussing just one of the ways they use their _scanners_ here. I have been following this thread with much interest. I live near RxR tracks, but since my hobby has been to scan more "traditional" freqs, I never knew this stuff even existed. And Emilio and CW are only two examples of why this group is going down hill. At least the recent flame-fests seem to have died down. BTW, anyone know how to create a kill file to filter this stuff when using Netscape 3.0's news reader? Seriously, I would appreciate knowing that.

> - x136@aol.com

YOU HAVE SPOKEN WRONG X-FACTOR! WE SHALL GATHER YE ROUND AND THROW
STONES AT YOU BECAUSE YOU DON'T KNOW OF WHICH YOU SPEAK.

Peculinary interest has nothing to do with it. Federal regulation does.

QUOTED FROM THE CODE OF FEDERAL REGULATIONS:

"Section 605 of the Communications Act, 47 U.S.C. 605, provides,
in part, that, ``no person not being authorized by the sender shall
intercept any communication [by wire or radio] and divulge or publish
the existence, contents, substance, purport, effect, or meaning of such
intercepted communications to any person.'' In executing its
responsibilities, the Commission regularly monitors radio transmissions
(see Sec. 0.116)."

Would you like the URL? (The text is not copyrighted.)

THEREFORE MY UNREAD, VERBAL AND OVERCONFIDENT FRIEND:
Publishing and divulging of signals not intended for the internet
audience are taking place on the internet and therefore must be done so
by permission of the sending parties, if it is being done legally.

It is not illegal to rebroadcast a BROADCAST intended for the general
public. Radio and TV Stations monitor each other to find out what, if
anything, they're missing. They don't rebroadcast local items because it
would make them look as uninformed as you are, but frequently pick up on
news items from distant sources and rebroadcast them, like during a
California earthquake. Generally they'll get permission anyway.

However, a legal copyright statement could be made in a broadcast to protect the broadcasting party (frequently heard in ballgames) because broadcast communications are not protected from publihing or divulging by Section 605 of Code 47. The contents, descriptions and accounts can be protected by copyright law. Radio stations frequently exchange letters of permission to rebroadcast copyrighted information.

Copyright is spelled C-O-P-Y-R-I-G-H-T. Put that in your ear.

Ed

I have the Icom IC-R10 and it is a real signal grabber. Also have the
IC-71A. Ditto for that. Personally, I'd go for the R10. You won't
be dissapointed!

Happy Thanksgiving!

Its interesting that many of us see more and more intrusive government
operating behind the scenes while the media simply ignores the problem,
or is totally uninformed. However, the media is filled with leftwing
democrats who love the power of Big Brother if it will help them turn
America into their wet dream which is a communist Utopiaian state that
they control.
But, with regards to Big Brother and the increasing number of
"investigations", someone has got to get Congress to take a very close
look at these law enforcement agencies including the FBI before these

problems escalate even more!

What law? What is the PL number or the Title and Section of either
the United States Code or the Code of Federal Regulations?

This "law" that you keep mentioning does not exist. The FCC has made
some declaratory rulings regarding ham operators' rights and
privileges with respect to antennas and other issues, but there is no
Federal law that reads the way you say it does. The President can't
just "sign a law" unless both the Senate and the House of
Representatives send it to him. And President Clinton has issued no
Executive Orders addressing special privileges for ham operators that
preempt State laws.

Turning Stone, the ONP, and the Sheriff all have talkgroups on the JPJ
Communications commercial SMR (trunked). AFAIK, it is an EDACS
system, so those of you in the central NY area with TrunkTrackers are
out of luck there.

Oops! Gosh golly gee wiz! Guess we all better block out the third harmonic 2-meter frequencies so that we don't inadvertantly illegally "evesdrop" on our portable phone friends, huh? Wonder if we'll get in trouble if we accidentally overhear and then divulge something overheard to be coming through the amateur bands like that!!!

My question is, WHAT is a PORTABLE phone doing with a signal strong enough to cause interference to amateur frequencies?

Todd

TRANSCRIPT OF DIANA'S LAST CELL CALL
==========
Diana: Shut up Dotie, I'm on the phone.

Phone: You have reached the psychic friends network, please enter your
credit card #

(DTMF tones)

Phone: Hi I'm Cindy, your psychic advisor, what's your name and
asrological sign?

Diana: Hi cindy I'm Diana, a Virgo. I need to know 3 things,
1. Will I be getting any sex tonight from my handsome boyfriend.
2. Will I live a long and happy life married to him.
3. Will I live to see a worldwide ban on landmines.

Cindy: Well Diana, it looks good, I looked at the stars, and my
computer generated tarot cards, it seems that if you want sex tonight,
you will get some.
You will be married sometime next year, and will spend the rest of
your life happily married after that, I usually don't tell people
this, but I think you will live to be over 100 years old.
And I think in the next 5 years you will see a worldwide ban on
landmines.

Is there anything else I can tell you about?

Diana: Oh shit, ...screams, screeching tires, breaking glass and
silence.....

The HTX-202 is not a scanner.

Before you venture into buying this thing, you need to ask the seller a few questions about it, first. If he doesn't know anything about it, don't buy it...and that's not because of a worry over it's condition, either.

Give him another chance to clarify his ad, first. If it's still mysterious the second time, report it. There is also something he should be demanding to see before he is able to sell it as well.

This sounds all too familiar an ad to me. Someone tried to fence me an FAA-registered aircraft band hand-held transceiver once. He didn't know what it was, thought it was a scanner, didn't even notice the push to talk button on it. Offered it to me at a rediculously low price for such a peice of equipment. He just wanted to get rid of it. I knew he was fencing.

Rich,

If you're interested in monitoring military communications - particularly military aircraft - you need to join MilCom, the military monitoring e-mail listserver. We have several hundred members across the U.S. and around the world. Post your question there and somebody surely will be able to help.

To join, send an e-mail message to: Majordomo@grove.net

In the subject line put: MilCom

In the text area type only: Subscribe MilCom

In the meantime, check out http://www.airnav.com for the air traffic control frequencies for Little Rock AFB.

It would still be directional, with the smaller end being the front.
It's only now going to be more acceptable to vertically polarized
radio signals, since the antenna itself would now be vertical.

NiMH cells call for a different charge scheme and the do get hot when they are charged - if they aren't getting hot then they aren't charging properly.

NiMH batteries do have a couple of advantages. They have a higher capacity and don't suffer from memory effect. They also have a couple of drawbacks. They don't last as long as NiCads. The cycle-life of a NiMH battery is much less than a NiCad. The deeper you discharge a NiMH battery the more you reduce it's life expectancy. In this aspect they are much like Lead Acid or Gelcell batteries. NiMH batteries don't like to be discharged quickly either whereas NiCads handle this well.

I think you'll find that NiCad batteries have improved quite a lot in the last few years. The trick to getting a NiCad battery pack to last a long time is to "cycle" or excersize the cell once a month. Many of the new battery chargers have this feature and it does pay big dividends. Also, most of the professional battery packs as used on handies have cells that are "matched". The ESR and capacity are tested and like cells are put into packs together. This helps a great deal!

In my opinion, and it may not be popular, NiMH are not worth the bother. A good battery charger/conditioner and NiCads should be all you ever need.

It did when Bill Cheek started to drag me into it.

You OBVIOUSLY are a new comer to this NG.

A little over a year ago
we had a BIG problem with Cheek using this newsgroup for his own
purposes of self support. There was a BIG battle here, & a
handfull of people carried the message for the group to Cheek
that we would not allow this to happen. I was one of those people.
Do you want to see a couple sample messages from that time
so you understand what is happening?

It's sorta like the situation with Iraq (Cheek being Saddam Hussein).
Occasionally we have to use a little for to nudge him back
into reality & acting appropriately.

> There is a new newsgroup out there
> John. It's called alt.radio.scanner.flame_fest. Go see for yourself if
> you don't believe me. Do us all a favor. Post your off-topic banter

I don't intend on going there because I don't believe in flaming.

It sounds like YOU should be there.

How does one get rid of the annoying beep when the keys are pressed? I seem to recall
something from years ago involving a group of perhaps 5 or 6 wires and either clipping or bending back the middle (silver? grey?) one (or third from the left or right if there are six). TIA for any info.

Regards,

Warren

Subject: Re: Another "talking" railroad detector.

-> Isn't this better for rec.railroad ???????? Perhaps I missed the
-> original post.

He's talking about frequencies used by the railroads, isn't he?

The frequencies he listens to on his scanner?

Boils right down to the subject matter of the newsgroup, I would say.

And much more on-topic than ham radio code vs no-code.

Or the idiots replying to another idiot babbling about walking into
police stakeouts and getting his ass thrown in jail and losing his
precious scanner that he broke into the police station to recover.

At least listening to railroad frequencies on the scanner is an
improvement over the drivel some oatmeal-mush brains hear with
the fastfood frequencies.

Actually... by using the ham radio... you can avoid local call access
charges.

In Japan, the local calls are not free so the use of ham radio is a
great way to avoid unnecessary tel charges.

That's why amateur radio is so popular in Japan.

I think local calls in north america shall not be free... many
people abuse the system (not to hang up etc... by using the internet
or a long friendly conversation) and it will invite the interest in
amateur radio by doing this.

I think it's a toss-up. We are talking about scanners and issues in
scanning. Railfans are big users of scanners, after all.

Rec. railroads is dead, but I agree that this thread would probably
find more readers and responses in misc.transport.rail.americas which
is an active group.

Do you have the freq of these devices, commonly called End of Train
Devices (EOTDs)? I think that most operate at 457.9375 but at very
low power. I can pick up transmissions a few miles away or so.
Sometimes you can hear the transmission before hearing/seeing the
train. Can be useful for trainwatching.

From: Dick Brennick <dick@brennick.com>
Message-ID: <01bceb24$8e5ada00$db2060cc@default>
Source record: 181100

I'm a part-time chauffeur (lord help me)... Much of my activity involves transfers to and from local airport(s) (both large and small as well as public and private) in Mass., R.I., Conn. and N.H....

I currently use a PRO-46 in the vehicle and hand held while at the airport(s) to keep track of the appropriate incoming flight's progress (or lack thereof)...

Much of the time, I'm running late for a pickup on a particular incoming flight... In those instances where I happen to intercept pertinent communication (pilot to tower, etc.) it is a distinct advantage to me in covering my assignment...

Additionally, the computer terminal screens are only too frequently, functionally inoperative both at the Limousine Pool and at the Limousine Stands at the particular terminals... Again, in those instances where I happen to intercept pertinent communication (pilot to tower, MassPort, individual Carrier Ground Crews and Support Staff (greeters etc.) it gives me a distinct advantage...

This is all kinda new to me, and I speak with relative ignorance...

Is anyone out there willing to suggest what they believe are the best (all encompassing, accuracy and frequency of being updated) sources for the specific frequencies that would best support my efforts???

Thanks in advance...

Dick Brennick - Belmont, Massachusetts

I bought AA NiMh batteries w/charger from Norman Camera
(www.normancamera.com) for use in my digital camera.

They outlast Nicads by about 1.5-1 or better, provide the same cell
voltage as Alkaline, and I am generally pleased with their
performance.

They DO require their own charger. I got the charger and 4 AA NiMh
for $34.95. Batteries alone are 19.95 for 4. They charge in 6 hours.

However, they have a shorter shelf-life than the others, and ought to
used freshly charged.

Amateur radio does indeed have a somewhat special status. As others
have noted, the amateur bands are somewhat akin to the notion of
public parks of the airwaves. They are a place where the public can
transmit on public spectrum solely because they want to, and not to
serve some job related purpose. I think that's true to an extent, but
amateur radio is also a chartered radio service, and Part 97.1 lays
out that charter. Amateurs are supposed to do more than just play
in the park, they're supposed to serve some national purposes as
payback for their access to very valuable spectrum.

[snip]

>Remember, it doesn't matter if this statement is true or not, it only
>matters that THE FCC BELIEVES IT TO BE TRUE.

That's an astute observation. And for the most part today it is an
objective view of affairs in amateur radio, IE we are not living up
to our charter purposes. We are not using our spectrum to advance

the SOTA. We aren't using amateur radio as a lifelong learning laboratory.We are not developing a reserve of operators and electronic experts skilled in techniques which can contribute to the nation in ways relevant to modern communications needs.

We are barely serving a function for public service and emergency communications (a role largely usurped by the cellphone and other more available and more targeted, communications resources). And we are arguably acting to the detriment of international goodwill with some of our gaming activities. So we do indeed need to focus on once again becoming a national asset instead of tending toward being a national liability.

>Since Morse Code skills set the amateur radio operator apart from any
>other type of civillian radio service, the requirement for the code
>should never have been removed for this reason alone. Once the hams

>we'll all be using the new FM CB band. It doesn't matter that CW is
>obsolete or not! The point is that CW skills are special, and set us
>apart from the rest.

The unhealthy emphasis on Morse does set us apart, but not in a favorable way. It gives the perception (and as you noted above, perception is reality to those who control our destiny as a radio service) that we are backward and clinging to obsolescent methodologies in order to perpetuate an old boys club. That's one of the most damaging perceptions which we must overcome.

We must reshape our image so that we are perceived as a vital, dynamic, and productive radio service which is actively contributing to its charter purposes in relevant ways. We must address our demographics to reverse the slide into senility the statistics currently show. And we must refocus our activities in ways that directly address our charter purposes. *Then* the image we will project to the regulators will be one worthy of our chartered status.

At least you agree that morse code is a waste, but neither code or a
newsgroup post are a waste of bandwidth. Perhaps a post takes up some
memory or storage space, but bandwidth has nothing to do with it.

<Pedro.Arriegas@iti.ineti.pt> wrote:

> Can anyone tell me the diference between the scanners AR8000 and AR3000?
>73 to all

In short,
AOR AR3000 = Base
AOR AR8000 = Handheld

Here are some feature (Taken from specs on Durham pages)

AR3000

- 400 channels (4 banks of 100 channels)
- 4 priority channels (one per bank)
each memory can store mode, frequency, RF attenuator setting, and
lockout status
- 4 search banks
up to 100 frequencies can be locked out of each search bank!
covers 100kHz-2036MHz AM-WFM-NFM-U/LSB-CW
scans at a maximum of 50 channels or steps per second
sensitivity is 100kHz to 2.5MHz (SSB/CW 1.0uV)-(AM 3.2uV) 2.5MHz to
1.8GHz (SSB/CW 0.25uV)-(AM 1.0uV)-(NFM 0.35uV)-(WFM 1.0uV)
1.8 - 2.0 GHz (SSB/CW 0.75uV)-(AM 3.0uV) (NFM 1.25uV)-(WFM 3.0uV)
- built-in RS232 port for easy computer interfacing
- 1.2kg

AR8000

- 1000 channels (20 banks of 50 channels)
- Covers 500KHz-1900MHz AM-WFM-NFM-U/LSB-CW
- Scans at a maximum of 30 channels/sec
- Sensitivity is 500KHz to 2.0MHz (SSB & AM by feild signal strength
2.0MHz to 30MHz (SSB 1.0uV)-(AM 3.0uV)-(NFM 1.5uV)
30MHz -1.3 GHz (SSB 0.25uV)-(AM 1.0uV) (NFM 0.35uV)-(WFM 1.0uV)
- 390 g (Including antenna and batteries)

Can also be interfaced to computer via a special cable (Not included)

Due to the 1997 Gingrich fiasco, the FCC recently revoked the
certification for the AR8000 since it was too easy for people to
reprogram the radio's bandplan thereby opening up the taboo cellular

telephone bands.

This meen that you can't buy a new AR8000 in the U.S. You still have the option to buy it imported (Canada for example).

Take a look at http://www.durhamradio.ca/scanners.htm and you'll find a lot of info about some scanners.

Remove the anti-spam texts from my return address.

3515. Broadcast radio secrets for scanner listeners

Newsgroup: rec.radio.scanner
Date: 1997-11-08 00:00:00 UTC
From: Marconi <spamfree@email.box>
Message-ID: <01bcec7b$bdeba1c0$LocalHost@default>
Source record: 180871
Cross-posted to: alt.radio.scanner,rec.radio.scanner

As a commercial radio broadcaster, I will share some of our industry "secrets" for anyone (like me) who finds the industry fascinating.

We can be heard at various places on your scanner. If you are lucky enough to live near the line-of-sight between a station's main studio and its transmitter, you might be able to listen to the audio of the station via the studio-transmitter link (STL). This would probably be found between 944 and 952 MHz. In most cases this is analog and easily receivable on any scanner, but you should try to listen in wide FM mode (if your scanner supports it) to hear any fidelity. One note: sometimes stations send their left channel audio on one frequency and their right channel audio on a separate frequency, and other times they send a signal that is already multiplexed.

When the station does live remote broadcasts (at the mall or wherever), there are four ways of sending audio back to the station: satellite (not practical for local), direct phone line (including ISDN), cellular (illegal to monitor), and by auxiliary transmission (our most common method). When we do a live broadcast from the mall, we use one of our auxiliary transmitters (usually 10 watts, 450-455MHz) to send the audio back to the station. Although the station only airs a few minutes of this each hour, we are sending a steady stream of very interesting audio to the station -- and to anyone who might be listening on their scanner. You can hear the DJ flirt with groupies, complain about management (usually about me), and hear all the things that go with a live broadcast. I promise you, the most interesting parts of a live broadcast are NOT the parts that actually go out over commercial radio!

Still one other way you might hear commercial broadcasters over your scanner would be when a news reporter is communicating with the station just prior to their actual broadcast from the field. Sometimes you can hear information that the reporter would love to broadcast, but he doesn't have authorization for its official release. This is sometimes by two-way VHF (150-162 MHz), UHF (450-470 MHz), or by cellular. Unfortunately for the scanner listener, this has become nearly all cellular as of late.

It is my hope that you enjoy "eavesdropping" on our industry. You can learn a lot about who we are and why we do the things we do. Over a scanner, our boring news reporter might actually sound interesting, and our flaky DJ might actually sound intelligent! We hope you enjoy listening to us, wherever you can find us on the dial.

Marconi

Have my own design and it works great with commercial radios such as
the Maxtrac, Spectra etc. Small circuit installed inside your radio
detects control channel data and the so called "GE tones" Unlike some
other circuits that only mute your radio when they detect the tones,
this circuit keeps your receiver muted until its determined that the
signal is NOT control data or GE tones thus providing you with a
faster and quilter scan.

I'm in Toronto Ont Canada if your interested feel free to email.
me at ronkatz@interlog.com

I also sell GE radios

in audio un mute delay line to eliminate the problems with un muting
during scanning

I agree with you totally Mike. The no-code nonsense is exactly
that...NONSENSE. If people are merely too lazy to learn a relatively

simple method of communication, other than merely using their big mouths to create more QRM, then maybe they really aren't interested in anything other than instant gratification for their personal needs (kinda of a politically correct philosophy). I'll bet I get flamed from no-coders just for agreeing with your viewpoint (I'm an old geezer at 51 anyway...also was licensed as a Novice in 1980 and upgraded to use voice in 1986).

A stop over to Radio Shack and purchasing a copy of Police Call
might be a start. They go into the concept of scanning & trunking.
Scanners that have come out in the last year can follow Motorola
trunked systems. Unfortunately, there is also an Ericsson/GE trunked
system that no scanner can follow (yet). Models by Uniden that follow
Motorola trunks & operate as a conventional scanner are BC-235
(handheld) & BC-895 (base). There is an RS HH model that is a Uniden
clone and is Pro-90, I think.
Both Uniden & RS are reputable manufacturers of scanners. AOR is a
mixed bag from what I have read.
The best design of scanners are triple conversion receivers.
Hope this helps some.

If I remember correctly, when I purchased the NMH packs for my 3000,
they told me that they modified the charging circuit to accomate the
charging of the NMH cells for use with the original Uniden charger.

Presumably this means you wouldn't throw a drowning woman a life-preserver because she was abviously too lazy to learn to swim as a child and therefore did not deserve any sort of artificial equalizer - good Ham attitude Terry (and Michael) let everyone who doesn't match your personal ability drown - screw them - they are a bunch of worthless money-for-nothing no-hopers - eh. Wonderful.

We are proud to announce the availability of << Pro Data >> Version 1.4
for Windows 95.

The most sophisticated and powerful Frequency Database Manager ever developed.

Please visit our web site at http://home1.gte.net/prodata1/index.htm
and view the screen shots before downloading the 30 day demo.

Summary of Features:

26 fields of information
Order of fields is customizable
Grid view window for easy display.
Record view window for easy data entry.
Import from Percon, ScanWare, APF, and UFDBF database files.
Export to APF, and UFDBF database text files.
Querys the database returning records meeting user criteria with unlimited
possibilities.
Find and Replace data in any field.
Several types of code viewable/editable windows
Change the capitalization of data in any field
Reports - Prints to a file or printer the opened database or query.

I have heard that Uniden will release a new base scanner, BC9500xlt I
believe. This is supposed to be the same scanner as the 895xlt with
alphanumeric display like the 9000xlt. Don't know when they plan to
release it, haven't seen anything about it on Uniden's web page?

From: JungleJim <junglejim@delta.com>
Message-ID: <34647EF2.24@delta.com>
Source record: 180884

Morse code is not dead. How many times have we scannists heard morse code used to identify a station. Last week I decoded a station ID so that I would know the call letters. As it turned out, the station was a local common carrier in the low 851mhz range. Then after finding other frequencies in the same area and decoding them I realized that they were all licensed to the same organization. The police often use morse code to identify their stations as it provides a small amount of security in keeping the station ID from the average criminal.

Keep Listening,
junglejim

Hi Greg,

Sorry to hear you bought a CT-17 when you really only needed
the RS-232 interface lead and the CS-R10 PC software. A few
customers have been talked into buying the CT-17.

The CT-17 level convertor box is a multi port interface box
to allow connection of a variety equipments to a PC without
attention to accurately setting output levels. See page 74
of R-10 manual.

Perhaps you can return the CT-17 for refund or cradit.

Regards

Ken

You're thinking of P3A. That was the satellite which would have
become Oscar 10 if the booster hadn't failed. Oscar 10 was thus
P3B. P3C was Oscar 13. P3D is the latest and greatest of the
series.

The product you are referring to is called "Quick Grid Repair Resin" made by the Loctite Corp. of Cleveland, Ohio 44128. It is available at most automotive stores, and is typically used to repair the rear window defogger elements. Works very well on scanner keypads (used in on my Pro-39--works like new!).

CTCSS or tone squelch is NOT encryption of any kind.

Nope, I think it is quite obvious that morse is obsolete. And as a 25 year EE and a 20 year ham, I can show you 10 things that work better.

The "we're trapped in a basement with only a battery and a capacitor and some wire" argument is total crap. You'll more likely be trapped in the basement with a laptop, a handy talkie and a modem and a cell phone.

And several batteries.

And you'll have several million times the chance of being noticed, especially given the idiocy that goes on on HF nowadays. "Anyone need this county? I'll relay everything needed both ways so you can work it." "This is the wintertime golf course workers all day watch on 3980. Anyone got a joke?"

HF and CW is a joke.

Information on where to find OR actual preassembled very low power FM transmitters (3). Looking for two under 10W and one over 10W. Whatever anyone has had luck with for 1-5 miles transmissions, please let me know. I don't possess much electronics assembly ability and would like either premade unit or very simple kit. Thanks a lot.

3555. Killer Tornado Five years Ago in Brandon, Mississippi

Newsgroup: rec.radio.scanner
Date: 1997-11-08 00:00:00 UTC
From: lester <lester@intop.net>
Message-ID: <3464eef8.0@christy.intop.net>
Source record: 180939

I didn't have my PRO-35 scanner back then...
It has been five years since the killer tornado struck Brandon, Mississippi, a small community east of Jackson.
During the American Civil War, Union forces came through Brandon, after having burned Jackson to the ground, and did some damage there. The newspaper press was thrown into the street, which was just a muddy road then.
The tornado first went through a trailer park southwest of town, and many deaths and injuries occurred there. The older part of Brandon was struck next, with many roofs blown off, and trees felled into houses and onto cars.
After that, the tornado hit a new subdivision, with many new homes there, and killed more people there.
I went to the central part of town the next morning, and took my camera. Homeowners in this area had me take photographs of the damage to their homes and property, so they could present their insurance companies with early evidence of their loss. I just shot the film, and then gave the exposed roll to the homeowner. I did this for free, and I had supplied the film. They then were able to arrange for
processing. Lots of time was saved there. Area drugstores told me they were amazed by the pictures. Of course they peeked at the pictures, having been told by the homeowners what to expect. I had gone into the inside of some homes, and taken pictures there, showing the damage.
I had one roll of film per household. Some had film for me to use too, and were too upset by the tragedy to shoot their own pictures. I did not go into areas where deaths occurred, as police photographers were assigned there. A year later, I drove through the neighborhood, and saw that repairs had been made, and the homes looked good again.
I now have a weather page, designed to be easy-to-use, and to provide fast information concerning storms and weather. It is at:

http://www.geocities.com/ResearchTriangle/Lab/4419/

Much of the page uses Push-Buttons to obtain information, and the page is reviewed by a friend of mine who has a degree in meteorology.
If you visit my page, let me know what you think of it!

Thanks,

IMHO if all someone wants to do is talk and not learn Morse Code, let them "talk" on a CB! If an individual is interested in learning about radio communications, electronics, and it's history (what I believe amateur radio is all about) let them learn EVERYTHING from Morse Cose to digital protocals and then call themself a Ham. ?????

> Note that people HAVE been convicted of crimes on the basis of
> comments heard on portable and cellular phones.

>In any case, it is probably not a good idea to discuss your drug deals
>or corporate mergers on an unencrypted analog radio phone.

in Canada, we can discuss what we hear on the basis of:
- leading to the arrest of criminal activities
- court situation
- discussing to the authorized government agencies (such as

radio inspector, police etc.)
- with permission of whoever involved in the conversation

> Even if it
>is illegal to listen to them, and, in theory, new scanners which can
>pick them up can only be sold to authorized agencies, there are plenty
>of people who can hear your phone call and unless they publicize what
>they hear, nothing is going to happen to them.

you can pick up cordless phones easily... but cellulars are becoming
more difficult.

I bought the software and cable a couple of weeks ago and my impression of it is that it is still new and there are a lot of kinks that need to be worked out. One thing they don't bother to tell you is that it does not support ANY trunking features of the BC895. I don't know why anyone would buy a trunking scanner to use it in non-trunking mode, but hey. When I asked them about this they informed me of a NEW $400 version of the software that requires a board in your computer. All I want is for Uniden to release the protocol that is used. If necessary, I'll just hook up a serial port monitor and figure it out myself.

The user interface for the low-cost software is so-so but it is adequate for programming the scanner and there are some neat searching features which you can't do with the scanner alone, like setting signal strength based squelch and logging a range of search hits. All in all, I guess I would recommend the s/w for the current price, but I wouldn't buy their $400 version. Hope this helps.

Well I tried it - the "most sophisticated and powerful Frequency Database Manager ever developed" has it's database functionality disabled for the demo version.

No uninstall program
Type-o s (Ok the guy is not from English land)

I'm only interested in the database features - I don't need another program that simulates the buttons and displays on my radio. You know the ones that have a "birdie" button.

Of course everything else sucks except True Scan.
Of course people may "say that they are happy with those "birdie button" type programs, but they paid 99 dollars and won't admit they use crap.

Still this program may be really good, but without demoing the database part I'll never know.

To all a good night
-Emilio

Hi all.

I'm going to be heading to Calgary/Banff/Lake Louise soon for some skiing
and was wondering if anyone had freqs or freq lists for these areas.\

Any help would be appreciated.

Thanks,

Jesse

The answer is simple.... Just ask the M.A.R.S. commander why they do not allow code (CW) to be used on their frequencies and you will get a very good and simple answer.

While we are asking questions..... ask the F.C.C. why they get requested to use the CW portions of the bands for voice communications during emergency situations.

Also ask why Japan is increasing the number of hams faster than we are. What is their reason for success while we fail?

Get the answers to those questions, ask a few of your own, and then THINK. If you are under age 75, in good mental health, and not on drugs, you will understand why those that make the rules need to be given a "boot to the head" and a more reasonable policy adopted.

Most scanner-ful freqs. are broadcast utilizing vertical polarization which means the transmitting antenna stands up and points at the sky. Thus, the elements of the TV antenna should also point upwards towards the sky.

Good luck.

He is correct,

I have a station here in Japan right now 7J4ACS. I am allowed as a Tech+ to operate on all bands except 30 and 20 meters. Its ture that I am only allowed to run 50 watts, but you would be surprized how many contacts you can make on low power. I would rather have access to all bands with low power, then fewer bands with higher power. Besides there isn't much differance between 50 and 200 watts.

>of then new Sputnik that was supposed to be up on Mon.?

AFAIK, P3D was *always* scheduled to go on 502, but 502 was delayed about
a year due to the launch failure of 501. Analysis showed the structural loads
on payloads riding the Ariane V satellite bus would be greater than AMSAT had
been told, so AMSAT had to re-engineer the structure to handle the higher loads.
That couldn't be done in time to meet ESA's launch schedule for 502, so P3D
didn't go. ESA recognized that this was partially their responsibility because
of the structural load parameter change, so they released AMSAT from their
launch contract. So the launch money is still in the bank, and negotiations for
a new launch opportunity are in progress.

This is not a bad thing. First, the next launch vehicle will benefit from
lessons learned from 501 and 502, so it is likely to be a much more
reliable vehicle. Second, this allows AMSAT to continue to refine the
payloads on P3D. Thus our chances of getting a good satellite in a
good orbit have improved considerably. The only cost is that we have
to be patient a bit longer.

Sputnik II was hand launched from MIR and is beeping away on 145.820.
You can copy it with just a handheld, though of course a better setup works
better. It is approx 2 km above and behind MIR at this time, so figure on
hearing it just after MIR passes over. Doppler is about +/- 3 kHz.

Gary:

I think Ken's intentions were good. There is a simple cable assembly that consist of a DB9 RS232 connector, with a small cable, that has a standard stereo mini phone plug on the other end . What Ken may not have been aware of is the DB9 shell, houses some small interface circuitry. He was correct in saying that the ICOM CT-17 isn't required, and a bit of an over kill. You were also correct in saying that just a normal RS232 cable would be bad news.

Grove Communications sells the cable assembly I'm referring to, for around $49.00, I recall. And if I'm not wrong, the CT-17 goes for around $140.00. Grove also sells a DOS based program that allows you to program, clone, etc., the IC-R10. I think the software was around $40.00.

It has been demonstrated amply that modern digital modes can beat the
crap out of Morse on both power and bandwidth for equal or greater
data rates and can operate at signal levels where Morse can't even
be heard to be copied. And this can be done with equipment that is
only marginally more complicated than Morse gear ... not enough
"extra" complication to make it unattractive to anyone with the smarts
to build it and use it ...

> By comparison, voice requires much more power and bandwidth and more
> sophisticated equipment.

So???

> In certain situations, Morse is the only viable option (other than not

Please elaborate ... I can't think of a situation where a well-prepared
ham would ever find Morse his "only viable option."

> If you have the luxury of being able to transmit
> phone (i.e. voice), it's obviously much more convenient.

Well I'll be darned ... finally a logical comment.

My Weather Information Site, The Dawley Homepage, at:

http://www.geocities.com/ResearchTriangle/Lab/4419

Designed as a companion to your scanner, with your police, fire,
rescue frequencies! My weather information page uses a Push-Button
format, to give additional data to go with scanner-received transmissions
concerning weather-related events. It's all here, and will help you
find out the most about on-going storms, etc., that are being talked
about on your local emergency frequencies!

Now with added features! (placed on-line 11-07-97) for your enjoyment!

The page should be easy to use, and worthwhile. Let me know what you
think of it! An E-Mail setup is on the website!

Thanks,

Michael L. Dawley
The Dawley Homepage

Ken,

Better have another look at your post Attaching a direct RS-232
connection to either the Cloning port or the CI-V port of the R-10
will surely burn it up. The R-10 can only use TTL voltage levels 5
volts max. You appear to be suggesting it is ok to directly connect
the R-10 to a computers serial port. The R-10 will not stand up to a
direct RS-232 connection without a level converter.

Actually, if the seller doesn't know how much to ask for it, he doesn't know where it comes from. He also doesn't know what it is. And if he doesn't know where it comes from, he's blind. If he doesn't know where it comes from, and hasn't tried to find that out, he doesn't care to know how much it is. If he doesn't know what it is, he probably doesn't care, and just wants to make money off it any way he can. If he doesn't know all of these things about the very thing he's trying to sell, he's "fencing" it. (That means it's stolen and he's trying to sell it, for those who didn't know.) And that's a felony offense. (That means its a crime.)

If he is not willing to part with the serial number, do not buy it. If he is, check out the number with the associated maker company to see who it belongs to. Then try to get ahold of that person and see if that person lost it, or if it was stolen from him.

The WEB Page at: http://www.oceanes.fr/~fr5fc/angspoutnik.html

indicates that you should send your report to FR5FC.
It gives the address and indicates you should include
an International Reply Coupon (IRC).

FR5KJ Radio Club
103 Rue de la Republique
97489 Saint Denis Cedex
Reunion Island

Although some stations do accept E-Mail QSLs, this appears
to be a low-budget operation and they are trying so save
on the postage from Reunion Island.

It depends on the circumstances. If the trooper is within his
jurisdiction or investigating something that occured in his
jurisdiction and sees you, yea he can nail you. The trooper
has the authority to enforce state or federal law. The difference
is only where he files his case, state or federal court. At least that
is how it works in California.

Since I hold an Extra class license, you may safely assume
that I know Morse Code.

While there are some young people using code, mainly it is
used by elderly hams. Many times I've done seven or eight
CW qsos in a row, all of which began with the other side
saying something like: "age here is 83, retired 30 years
ago, after WW2..."

Despite what you say, which I don't doubt (that some young
people are not turned off by Morse) my experience is that
most are. It is a drag, and it is archaic. Even many Morse
advocates on this forum admit that when you demo a Morse
QSO, the visitor gets listless, and glances at the door
every few seconds. Morse adds to the fatal image that our
hobby already has, that it is a hobby mainly for the
elderly. This is not desireable.

I agree that code has a place in our hobby. I merely don't
believe that a code EXAM should be a requirement for an HF
license. Two different things, you see.

A state officer has federal law enforcement authority? That's a new
one on me. Funny, a federal agent doesn't have authority to enforce
state laws. Unless he's been sworn in by a state, county, or local
agency.

I think in the really early days it was supposed to go on 501, but this
was changed to give the cluster sat builders an earlier launch and an
opportunity to lauch all 4 satellites in 1 launch. They are still thankful
for this preference :-) (I read some story by the Cluster guys about this
on WWW some time ago, a search on Ariane 5 and Cluster will probably find it)

Uh, no Roger, all we can assume safely is that you were able to correctly
answer 7-out-of-10 questions on a multiple choice examination. How you
arrived at those answers -- tarot cards, flipping a coin, throwing a dart
at the wall -- does not mean that you copied a sufficient amount of code
in order to determine what the correct answers were. Hence, it is NOT a
safe assumption that you know morse code.

>While there are some young people using code, mainly it is
>used by elderly hams.

I'll have to mention that to the dozen or so <45 hams I've worked on 80
meter novice CW the past week.

>It is a drag,

You're right. It *IS* a drag. When all you want to do is pick up a
microphone and talk -- RIGHT NOW! It is a drag for the "money-for-nothing,
chicks-for-free" segment of our society.

>Even many Morse

3621. Cop's racist remarks on radio phone; cop sues over taping

Newsgroup: rec.radio.scanner
Date: 1997-11-08 00:00:00 UTC
From: jmrubin@ix.netcom.com
Message-ID: <346486a7.31803541@nntp.best.ix.netcom.com>
Source record: 181014
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,soc.culture.african-american

According to the Saturday www.nytimes.com , a policeman in Kingston, NY was talking to his girlfriend on a portable phone, and a black neighbor with a scanner recorded his making racist remarks. (The neighbor was using the scanner as part of a neighborhood watch.)

The neighbor gave the tape to the head of the local NAACP. She says she went to state NAACP officials (they deny this) and then she gave the tape to the local (Republican) D.A. The tape was also leaked to newspapers. The cop retired with pension.

But, listening to portable telephones is illegal under recent laws. And, even when it was legal, it has long been illegal to repeat anything you hear on anything except a broadcast or an amateur radio transmission to anyone else. (I believe that dates from a treaty in the '30's.)

So, the cop sued the neighbor, the head of the local NAACP and the D.A. and other officials for violating his Federal privacy rights. The national NAACP will not help their local head saying her actions were unauthorized.

The D.A., who has had run ins with the NAACP on his not being sensitive enough on civil rights issues, is screaming at the national NAACP for not defending its local head.

Note that people HAVE been convicted of crimes on the basis of comments heard on portable and cellular phones.

In any case, it is probably not a good idea to discuss your drug deals or corporate mergers on an unencrypted analog radio phone. Even if it is illegal to listen to them, and, in theory, new scanners which can pick them up can only be sold to authorized agencies, there are plenty of people who can hear your phone call and unless they publicize what they hear, nothing is going to happen to them.

: I think Ken's intentions were good. There is a simple cable assembly
: that consist of a DB9 RS232 connector, with a small cable, that has a
: standard stereo mini phone plug on the other end . What Ken may not have
: been aware of is the DB9 shell, houses some small interface circuitry.
: He was correct in saying that the ICOM CT-17 isn't required, and a bit of
: an over kill. You were also correct in saying that just a normal RS232
: cable would be bad news.

I believe both interfaces are need to fully use the R-10. The simple
cable interface converts the RS-232C levels to ones the R-10
uses. This interface is used to program the radios memories,
search ranges, etc with a MS-DOS software that I think comes
with it.

The second interface (CT-17) also converts the RS-232C levels
to ones used by the R-10 but it connects to the remote jack on the
side instead of the speaker (cloning)jack on the top. With the proper
software the radio can be controlled to scan/search under computer
control but not clone memories, etc.

You don't need both interfaces but it all comes down to what you
want the R-10 to do.

Hope this helps.

: Grove Communications sells the cable assembly I'm referring to, for
: around $49.00, I recall. And if I'm not wrong, the CT-17 goes for around
: $140.00. Grove also sells a DOS based program that allows you to
: program, clone, etc., the IC-R10. I think the software was around
: $40.00.

Some Canadian newsgroup readers are apparently ignorant of their own laws. Your government defines mobile phone calls as "private communications" and it is illegal in Canada to monitor "private communications".

>see it? What were the particulars?

I just found the "law" that people have been referring to. It is not an actual Federal statute, but a ruling by the FCC. The number is P.R. 91-36, and it says that hams are allowed to operate mobile amateur transceivers that incidentally receive outside the ham bands. There is no blanket authorization for scanners.

Jim will probably already know that he can not to do that with his
Japanese license. To operate in the USA under an FCC reciprocal
permit, in addition to holding a license from a country with which
the USA has a reciprocal agreement, the applicant must must be:

1) A citizen of the country that issued the license (Japan), and
2) Not a citizen of the USA, regardless of 1 above, and
3) Never have been issued an FCC amateur radio license.

Since Jim say he holds a Tech+, this alone knock him out of the
running. But I'd guess that Jim is actually 0 for 3 on these rules.

From: mcnamee@ibm.net
Message-ID: <34661386.0@news1.ibm.net>
Source record: 180781

I recently picked up a Radio Shack PRO-64 at the $199.99 sale price.
I manually loaded it with the local frequencies that I most often listen to.

Now I'm looking into using the built in computer interface. I have
40-50 APF (comma delimited) files that I use with my CE-232 interfaces
and I'd like to convert them into files that Radio Manager for Windows
(or another interface) can use. I've looked at Radio Manager and I don't
see a way to create bank files other than re-entering them manually.

Has anyone found a way to create Radio Manager bank files using either
straight text files or comma delimited files?

Thanks,

Rich McNamee, K2QG

As has been mentioned already, Programit will soon support it. Scancat
and Radio Manager already support it. RM's help files describe the cable.

The computer interface is just one way: it lets you upload frequencies to
the scanner.

The manual for the PRO-64 has a section, under "Special Features", titled
"Connecting a Data Link to the Scanner". The section says:

"A data interface kit (not supplied) lets you program the scanner with
frequencies stored in a computer program. Contact your local Radio Shack
store for more information."

That's on page 59, and that's the whole thing. It might be entertaining
to go to RS, examine the scanner, flip through the manual, "stumble" onto
page 59, and ask the clerk for details. :-)

Ok, I'm set with the ht220, but now I need to know what I can do about a refreq. for an HT90... Need to know what I need and if anyone has, crystals, etc. to refreq. to 151.625, or other 'dot' freq. What's the crystals going for? Surely someone has them left over from a ham conversion or something! Might be interested in new case w/ptt intact as well.
Thanks,
Randy

This really IS the topic that will not die.

For my $.02:

1. If that's the best arguement you can come up with to keep Morse code, than I say let the cops have it while the rest of the world participates in the 20th century. Some cops ride horses; would you deduce that everyone else should also?

2. Morse ID's are not used by the police because it is an efficient and easy way to communicate. They are used because that's the way the vendor set up the radio system.

3. If code is so great and "provides a small amount of security" to boot, why don't they just dump voice altogether and use code for all communications? Smoke signals would also provide the same security, but I don't see anyone going around singing their praises.

Rock on,
Charlie

Mighty suspicious here! I don't think you can make the leap from a
person selling an item he may have gotten from a friend's estate, or
whatever, without knowing much about it, to the conclusion that he's a
felon who stole it. Ease up!

Based on the detailed information you gave about your location, I can
give you these specific frequencies:

The military aviation band is from 225 to 400 MHz. Some military
aircraft also operate in the 138 to 144 MHz band. AM is used on
almost all frequencies.

Considering a new scanner. Radio Shack has their PRO-64 on sale now for $199.95, ($100.00 off). It's triple conversion, so it can't be all bad. Any comments?

Also, it's my understanding it has computer interface capability, yet this is not mentioned in the catalog, and the local Radio Shack people claim it does not. If it does, is there any software and interface cable available for it?

Thanks,
Bill Crocker

I measured a PRO-64 and published the sensitivity graphs,
image rejection, etc. in August 1997 Monitoring Times.
Here's a portion of the column:

[...]

Performance

"...Our PRO-64 had better audio quality than our stock
PRO-43. Its small speaker produced clean audio unless the
volume control was cranked up. The squelch was well behaved,
with the proper amount of hysteresis and short tail."

"Bench and field tests show our PRO-64 to have little
intermod and adequate sensitivity (see graphs). When fitted
with a 12 inch Austin Condor antenna, we enjoyed monitoring
the simplex mobile-to-mobile chatter on 151.625 and 464.5
MHz as well as in-store communications in the 467 MHz band.
We observed a little intermod when using an outdoor Antenna
Specialists AV801 antenna in a rural/suburban setting, but
detected no image interference in the 160 - 162 MHz range
which would prove troublesome for railfans."

"We parked 2000 feet away from a cellular telephone tower and
searched the 855 - 869 MHz range to ascertain whether our
PRO-64 would experience interference from cellular phones.
Our PRO-64 was clean in the 800 MHz range, but we heard
cellular phone signals both in the civilian air band and
from 48.25 to 54 MHz, even when we removed the antenna."

"Later, we measured the PRO-64s cellular rejection at about
64 dB in the air band and 48 dB in the VHF-low band. The
signal-to-display frequency relationship on the VHF-low band
was:

actual transmitter frequency = 772.5 + (2 * display frequency)

For example, we could hear a 870.0 MHz signal when the PRO-64 was programmed with 48.75 MHz, though the 12 dB SINAD sensitivity was only 75 uV."

In Closing

"The PRO-64 is a good performer with a rich set of features and is a major improvement over the PRO-62. Drawbacks include short memory retention time rating, dim display backlight, and inability to charge AA NiCd cells while in the radio."

From the FAQ article SCANNER RADIO REVIEW BRIEFS:

[...]

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997.

My sincere apologies for my ignorance. I did not realize that the NAB would be in favor of suppressing the capture of any form of electromagnetic radiation. This seriously disturbs me. Our industry's existence is based upon the notion that the airwaves are free to use and free to capture. To be honest, my dealings are usually with my state association of broadcasters and the national Radio Advertising Bureau. It sounds to me that the NAB is hypocritical at best, but most likely are in someone's pocket.

I promise that I -- and I must remain anonymous at this time -- will contact the NAB personally on Monday, and I will let them know how wrong-headed they are. Although I do not think one voice can change an entire industry, I will certainly make my one voice one of the loudest they have to contend with this week! Thank you Dave for pointing this out to me. Let's keep the airwaves free for all of us!

REPLY...

I have to agree with Roger on this one.

I am 40 years old. I have been interested in radio since I was a kid (my father was a radio operator for the Air Force - 30 years).

In 1970, I went into the Army as a Radio Relay Operator/31M (by the way, I did not have to know morse code to operate those military radios).

And I have had a long history of using CB radio (since 1976 / KBEO-0299).

The one thing that has kept me out of Ham Radio all those years was the morse code requirement. Perhaps I am lazy. But, I can also honestly say that I see no reason for the morse code requiremant.

I don't think my father knew morse code and he was an Air Force radio operator for 30 years. If the Air Force can communicate around the world in wartime without needing code, why do a bunch of guys sitting in their living rooms need code?

I did a tour with the Army as a radio operator and still don't know code. If the Army can communicate around the world in wartime without needing code, why do a bunch of ham operators sitting in their living rooms need code?

The (no-code) Technician License was a personal invitation for me to become a ham radio operator and just yesterday I passed my test to get my ticket. I doubt I will ever upgrade to a higher license (unless the code requirement is dropped for those licenses also).

Maybe when I am retired, and have the time to sit around learning code, I'll change my mind. When I do, I guess I'll join the old guys sitting around arguing for the code requirement. I doubt it, but who knows?

SO MUCH FOR INCENTIVE. I believe ham radio is less than it used to be because of the no code. Keep making things easier and not earned and people become more abusive.... Maybe we should lower the need for doctors to learn early medicine because it's no longer used or needed. It is needed. By the majority of Hams who WANT it. You don't want it... you are in the minority.

Actually Don, I'm slightly offended by your implication that people that don't know code, such as myself, are dragging down ham radio (talk about abusive).

I am not less civilized because I do not know code. And knowing code will not make you, or anyone else, more civilized. A troublemaker can learn code. And a nice person can be excluded because he/she does not know code.

And I firmly believe that if code continues, there may be no HF ham radio activity in the future. And then you won't have to worry about abusive people, crowded bands, or anything else.

> Maybe we should lower the need for doctors to learn early medicine
> because it's no longer used or needed.

This is not a good analogy to use with morse code. A doctor does not need to learn blood-letting (a very common medical practice at one time) to be a good doctor today. A doctor needs to learn MODERN medical practices that will help with the patient's treatment. Code is not needed for modern communications.

> It is needed. By the majority of Hams who WANT it.

And absolutely nothing will stop you from using it if it is dropped as a requirement for licensing. If it is as good as you seem to think it is, people will continue to use it because they want to use it.

But, considering that no other radio service in the United States has a morse code requirement for licensing, it is silly to continue it as a licensing requirement for ham radio.

There's been some discussion of the PRO-64's computer interface and cable that is needed on the Programit mail list. I don't have the scanner (but for $200, it seems like a very good value) so I didn't pay much attention to it. I understand that John Montalbano, who developed the Programit interface is now working on a version that will support the PRO-64 (allowing you to upload freqs to the scanner from a PC).

Go to www.qsl.net/ka2pyj for more info.

Considering its 400 channels and triple conversion, you can't go wrong for $199. At worst you can return it within 14 or 30 days if you don't like it for a refund. If your area supports trunked 800MHz communications then I'd probably consider a Uniden Trunktracker, but if not then the PRO-64 is the way to go...

> Also, it's my understanding it has computer interface capability, yet
> this is not mentioned in the catalog, and the local Radio Shack people

It does, but the interface is not available through Radio Shack. Do a search on the PRO-64 through Dejanews at http://www.dejanews.com and you'll find the interface info for it.

Jack T.Dragon <tdragonNOSPAM@blarg.net> asked for:
> ... a list of what all of the generic business radio frequencies are?
> They're called things like "Green" and "Gold Star" ...

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Dot Frequencies

Dot color Other
Red 151.625 itinerant "J" Dot 467.7625
Purple 151.955 "K" Dot 467.8125
Blue 154.570 Silver Star 467.850
Green 154.600 Gold Star 467.875
White 462.575 GMRS Red Star 467.900
Black 462.625 GMRS Blue Star 467.925
Orange 462.675 GMRS
Brown 464.500 itinerant
Yellow 464.550 itinerant

"Dot" stickers are used by the manufacturer or distributer to
indicate the frequency of otherwise identical transceivers. They
are often found in rental inventories and on construction sites.
Additional itinerant frequencies include 27.49, 35.04, 43.04,
151.505, 158.400, 451.800, 456.800, 469.500 and 469.550 MHz.

I don't think many modern medical schools place a lot of emphasis on
the old practice of opening veins to "bleed out the evil spirits." Morse
is similarly archaic.

> It is needed. By the majority of Hams who WANT it. You don't want
> it... you are in the minority.

Actually, as I've pointed out many times, by the ARRL's own survey, the
percentage (of ARRL "member" hams, which IMHO selects in favor of more
likely Morse affinity)who use Morse "regularly" was only 27% ... hardly
a "majority" as you claim ... the remainder (except for 1% who didn't
answer the question) was remarkably evenly split between "never" and "rarely."

Seems your "majority" is simply a "vocal minority" ...

You are in luck, almost. The remote jack to the right of the FM width switch is the CIV interface port. With a MAX232 chip and a few parts used as a voltage level converter you are connected. Or you can spend $100+ on an Icom CIV level converter. Do a WWW search.

Source record: 180848

In a file of mods for the BC200-XLT scanner, there was a short mention of a mod that would extend the time the LCD backlight stays on. This is NOT the mod that ties two of the CPU pins together to make the light come on with the power switch, but instead retains the function of the light on/off button. Anyone know what is involved? Is it something as easy as changing the value of a timing capacitor or resistor? There are many times I'd like the light to remain on for several minutes, perhaps even an hour, but still be able to turn it off at the push of a button. Maybe there's a way to just defeat the auto-off function completely.

.

In return for the above, I offer the following:

1.) You can remove some of the annoying high-pitched hiss from the audio system by adding a small electrolytic capacitor directly across the speaker. I used a 33 uf 6.3 volt, after determining that a 22 uf didn't seem to do enough, and that the 47 uf I had on hand was just a little too big to fit. The voltage rating is not important, so you might be able to find still smaller sized caps that would fit. Polarity isn't important, just the ability to fit in the limited space.

.

2.) Checking the current drawn from the battery pack, I found that squelched it draws about 50 ma, and with the LEDs on that goes up to 73 ma.

>all it takes.

Making racist remarks in IS NOT a crime. It may be not be tasteful or politically correct, but even unpopular speech is protected under the first amendment, the same first amendment that protects Louis Farrakhan's right to define Judaism as a "gutter religion."

Divulging the content of an intercepted telephone call IS a federal crime under the Communications Act of 1934. The neighbor, if not the other defendants, should face trial in a Federal Court.

>The neighbor gave the tape to the head of the local NAACP. She says
>she went to state NAACP officials (they deny this) and then she gave

I fail to see what the NAACP has to do with anything unless they were involved in the release of the information to the media. Of course, the NAACP's silence in the matter might lead some (like me) to wonder about their alleged involvement.

You can get the replacement keypad for $5 and change from RS and do it
yourself. I'm no "Bill Cheek" so I had RS do it for me; total cost was
their minimum service fee plus the $5 = about $50. I love my two Pro-39s;
it was worth it to me; YMMV.

Mike:

It has part of it built in. It's a small phone jack on the back...can't remember how they labeled it. Then you need an ICOM CT-17 interface, which is a small black box converter that changes RS232 levels to something the ICOM can handle. There are some third part level converters that are less expensive. ICOM's is around $125.00 I recall. Check with Grove Communications, see if they have something.

From: BJC <bjc@mydesk.com>
Message-ID: <34665A34.DB2@mydesk.com>
Source record: 180855

My Pro-60 seems to have bit the dust.
It scans, but never picks up anything. I have had it for 2 years and it was working fine until last week.
I have tried putting a different (much bigger/better) antenna on it to no avail. If I put in an FM music (FM wide mode) station and turn the squelch down until I hear static, I can barely hear the station.
Volume/squelch work as normal.
I have checked the antenna connection inside and out and they look fine.
Is there a reset button like on older RS scanners? Will it help? (I really don't want to reprogram it if I don't have to).
Is it worth getting fixed at RS (or Lakeshore Electronics here in Toronto) or should I just scrap it?

Any help is greatly appreciated.

THANKS!

Now there is an idea for a good relevant thread to the group...Should Morse Code be a requirement for scanner owners. It would do away with all that chatter in the NG about legal restrictions since 99.95% of the scanner operators would have to give up their scanners. After all, what is a scanner except the receiving half of a ham radio? What do you think? 13 WPM or 20 WPM? Mabey 20 WPM will get you cellular privileges.

Personally, I think the code debate belongs somewhere else!!! I unsubscribed from the amateur radio groups to get away from it... I fully expect sooner or later it will show up in the K-12 and alt.christnet.bible NG's too. It shows up in the CB NG too. Of course you hear a lot of code on CB....:)

> And several batteries.

The laptop and modem won't do you any good because the outside VHF antennas are gone, and the stubby duck on the Ht 'might'-just *maybe* hit the repeater or digi *if* they had survived, but no--the quake took them out, too. Cell phone, in an emergency? That's a laffer.

So there you sit with all the hi-tech digital and voice stuff of your No-code dreams, dead in the water. You're gonna need a bit more that a capacitor and some wire, though.....better learn code and make some back-up plans.

Hi Gang!

I have just gotten the windows version of "POCSAG protocol monitor" by Deti Fliegel to run. What a great program!! And its free ware.. If you have a sound card you don't even need to build an interface. All you need to do is to pick off discriminator audio and feed it directly to your sound card. Brilliant thinking indeed... Nice job Deti! I use a pro-2006 and it took less than 5 minutes to modify. If you live in SE Michigan try these freqs when you get things up and running.

3697. Metro Toronto Police MDTs

Newsgroup: rec.radio.scanner
Date: 1997-11-09 00:00:00 UTC
From: Aaron Rossetto <_atr@netcom.ca_>
Message-ID: <01bced89$c20f0d00$ca55b5cf@pcaaron.netcom.ca>
Source record: 180865

Hi,

Does anyone know who manufactures the Metro Toronto Police MDTs, and, if so, what protocol they use? I've been trying to figure it out by sampling the waveform with my computer at a high rate. (I'm using a discriminator tap connection and it's fairly clean.)

It looks like it's some kind of biphase signalling mechanism--maybe Manchester or Differential Manchester--or maybe AMI/pseudoternary, but I'm sure quite which it is at this stage. If it were Manchester, could it be Ethernet data sent slowly (i.e. much less than 10Mbps!) over the airwaves? Has anyone heard of that being done before? I'm going on zero information here because I haven't been able to find any. What I *do* know is that it's not MDC4800 from what I can tell.

By the way, the frequencies I'm monitoring are int the 406 MHz range, so we're not talking about any MDT data sent via the Metro Motorola trunked system.

Thanks for any help.

Light Rail has gone to 800 mhz. You need a scanner which can scan between 866 and 867 mhz to pick up Sacramento Light Rail. In fact there isn't much around Sac which hasn't gone to 800.

3702. Need Radio Shack Model

Hi,

I am hoping that somebody can help me ASAP.
I am going to buy a Radio Shack base scanner. It costs $230. The
trouble is, I don't know the model # (Pro-???).. The CAT # is 20-414.
If you can provide me with this info, it would be greatly appreciated.
Please e-mail me directly at Chris135@aol.com

Thanks!

Chris

I can picture this.....I'm trapped in my bomb shelter (don't have
one), and I mange to build my radio with assorted parts laying
around...
I manage to squirm out a distress signal, when WHAMMO...some old
timer starts to berate me about my improper form and lack of
procedure. Before I can get across to him my need for help, he has
made numerous comments about my "novice" abilities, and has a few of
his old cronie friends supporting him.
Glad I had the cell phone, laptop, and Modem to back up my "emergency"
radio.

Message-ID: <19971109032900.WAA04492@ladder01.news.aol.com>
Source record: 180896

We buy Minitor II, Director II, and Keynote pagers in any quantity. Do you have excess pagers? Damaged pagers? Boards? Active filters? If so let us know, we will buy them all.

We will buy any model, on any freq., and in any condition working or not. Send a
DETAILED e-mail describing the pagers you want to sell. Include the following:
1. The pager type and model number example H03UMC1222AC
2. The total number of pagers and any accessories
3. The number of active filters in the pager
4. The condition of the pagers - electronically not just cosmetic (do they work)

Please note that we will not buy Minitor I pagers only Minitor II.

Also we take trade in pagers and give a credit towards the purchase of other pagers (If you have Director II pagers you can trade them in for Minitor II pagers or Keynotes on different bands)

CTCSS <also known as PL tone> is not encryption. CTCSS tones are subaudible tones sent along with audible transmissions by radios equipped to send such tones. The function of these tones is generally to activate a repeater for retransmission to other radios in a particular net. Using CTCSS tones, the operators of the radios in such a net can avail themselves of tone squelch, and not be bombarded with the traffic of other users of a particular frequency who are not transmitting the CTCSS tone said operators in said radio net are using.

CTCSS is more of a spam block than a form of encryption protection...

ALSO illegal. Not that I care, but it seems odd that you would mention
that listening to cellular is illegal, but don't mention this fact about
listening to station STL's. I am the last person to tell people not to
listen to certain frequencies because they are illegal, but I thought it
odd that you warn people about the cellular being illegal, and seem to
be saying that this is better because it is legal to listen to.

Another interesting thing to listen to on these frequencies are the cues
from TV stations to the on-location news persons on your local 10pm
news. You will be hearing what they hear through the earphone in their
ear.

>Keep Listening,
>junglejim

I believe the reason why they use morse code to ID is because it's
automatic and frees up time from people haveing to do it by voice. It's
faster as well. They don't have to remember to id, the machine does it.

Morse code does NOTHING to help the police as far as security goes when iding.
The criminals know the freqs already. Morse ID's that your talking about are
AUTOMATIC. Morse code is not dead but the testing requirement for it is IMHO.

Right. The MARS Director who ordered CW banned was a codeless tech.
Its pretty simple logic to see why CW was banned.

>While we are asking questions..... ask the F.C.C. why they get requested to

Probably the same reason why they get asked to relax band limits for the
different license classes.

>Also ask why Japan is increasing the number of hams faster than we are.
>What is their reason for success while we fail?

Because they include their CB radio service in the amateur licenses figures?

Carl:

Have you tried this? I took another look in my manual, and it's a little confusing, but...

It looks to me like the jacks on the right side of the R10 are strictly for power. One is labeled for the Charger, and the other is labeled for D.C., i.e.: external power supply, cigarette lighter connection, etc.

The illustration in the manual, showing the CT-17, appears to show the interface cable heading in the direction of the side of the R10, but not actually connected to it. I think it was just pointing in the general direction of the radio. The only advantage I see from using the CT-17, is to control more than one radio, from one computer. I downloaded an evaluation copy of a multifunction control program and used the top phone jack, and it was able to control all it's functions from that interface.

The simple DB9<---->Stereo Phone Plug cable, nor any other cable, is supplied with the radio. It is an option. The software is also an option. ICOM's software if very simple, DOS based, and allows you to upload, download, and clone, channels, and related mode, comments, etc.

> Tell Tauzin that you have had second thoughts and you realize that
>this is intrusive government and that you probably will not be able to
>support his reelection campaign in the future if he supports further
>restrictions on scanning.

I wrote Tauzin (and my own representative who was a co-sponsor) and
asked three things:

1. Just how am I "empowered" by a law which is the most restrictive
radio law on Earth, ranking among those passed by Communist China,
North Korea and NAZI Germany?

2. What is your Constitutional justification for supporting such a
law?

3. Are there any legal options which may be taken against a Member of
Congress who supports laws which violate the Constitution as well as
his or her Oath before God to defend and support that document?

I have not heard back from either Representative. Figures. Find out
who Tauzin's opponent is and tell Tauzin you are supporting that
person -- who will be getting your contributions. If possible, send a
photocopy of your donation receipt. Screw these bastards! If they
are going to piss on the Constitution, it's time they find other work!

>Do any state laws duplicate or contradict any federal laws?
>
>if so, which would be enforced?

I have a feeling that just about every law we have is contradicted or negated by some other law. It also depends on which law you're talking about. Child endangerment or abuse is not a federal interest (despite what the BATF said in Waco), and there are areas such as defense which is a federal responsibility. The federal government is SUPPOSED to have a very narrow band of legislative responsibility, and there are many things which have been made illegal, even though those laws are probably immoral and un-Constitutional. Marbury vs. Madison: "All laws which are repugnant to the Constitution are null and void."

fascinating comments about monitoring, considering ECPA.

>transmitter, you might be able to listen to the audio of the station via
>the studio-transmitter link (STL). This would probably be found between 944

Currently illegal to monitor in the U.S. Why? Who knows...

>When the station does live remote broadcasts (at the mall or wherever),
>there are four ways of sending audio back to the station: satellite (not
>practical for local), direct phone line (including ISDN), cellular (illegal
>to monitor), and by auxiliary transmission (our most common method). When

All of which are "protected" by ECPA. Again, it makes no sense, but
it is the law.

>Still one other way you might hear commercial broadcasters over your
>scanner would be when a news reporter is communicating with the station
>just prior to their actual broadcast from the field. Sometimes you can hear
>information that the reporter would love to broadcast, but he doesn't have
>authorization for its official release. This is sometimes by two-way VHF
>(150-162 MHz), UHF (450-470 MHz), or by cellular. Unfortunately for the
>scanner listener, this has become nearly all cellular as of late.

The two-way communications can be monitored, but by virtue of the more
obvious illogic in ECPA, we can only monitor those frequencies when
they are being used for two-way communications, not for broadcast
remote service. This, of course, presumes that the listener knows the
difference and can instantly analyze the communications being heard so
as to avoid listening to anything illegally.

>It is my hope that you enjoy "eavesdropping" on our industry. You can learn

Apparently it is NOT the hope of your brethren in the broadcast
industry. Congress didn't invent the above restrictions all by
themselves, and the cellular industry couldn't care less about
protecting YOUR communications (except for the ones you carry on via
cellular radio telephone, that is).

So, how about contacting NAB and telling them what REAL commercial
broadcasters think about monitoring of station communications by the
general public?

A good place to start is the archive for the TRUNKCOM mailing list at

http://www.grove.net/text_only/trunkcom-digests/

Here you will find a wealth of information about trunking and the use of the TrunkTracker scanners.

Happy trunking.

I heard of a program called TrunkTrac that will control
a Realistic 2006 or 2035/42 follow trunk radio systems.
This is different then the trunk.com program I heard
of.

Where can I find out more info on this program like
what systems it can follow, how well it works, etc.
Can someeone fill me in on the details.

I love mine. Really handy. Spend the few dollars for their antenna too.
Be careful with that screw on the back. Me hears it is not for frequency
adjustment, but sensitivity.

From: "Richard G. Christy, Jr." <richardchristy@worldnet.att.net>
Message-ID: <647ca8$5ls@bgtnsc03.worldnet.att.net>
Source record: 180677

Hi All,

I'm in the market for a new scanner but don't know what to buy. I currently own a pro2004, pro2005 and a pro43. My primary interests are Delaware County, Philadelphia, Penna State Police and some Feds (what's left that's not using DVP).

I actually was hoping by now that I could purchase an 8 or 16 bit card that fits in my computer that would allow me to scan freqencies just like the computer tv or radio cards do.

I'm also interested in trunk tracking (I think). Is it worthwhile or useful in this area?

It's possible that you may tell me just keep what I have because there is not much out there to replace my scanners. Either way, please let me know what you think.

Thanks in advance, Rich Christy

You don't have a clue though do you William? I contacted WinRadio recently
and received an E-mail reply in less than 24 hours.

> ICOM on the other hand is a well-known reputable company.

What does that have to do with the folks that sell it? Are all Icom
dealers reputable? If not you are talking trash.

Bottom line, you are talking trash.

Cheek is not WinRadio
Ham Radio Stores are not Icom

What is so difficult for you to understand William?

For Carl and others who have asked about TrunkTrac:

This is the descendant of technology upon which the BC235/895 is based. The system is called TrunkTrac (r) and it is much more flexible and has many more features than the BC235/895.

Of course it's wedded to a computer so there are tradeoffs. You can see and track Private Calls, Telephone Interconnects, and individual IDs of Type I units with this, but I disable that functionality except for users with a valid reason to have it (public safety, radio shops, betatesters etc). The current version (4.01) will track up to four different systems at once and has a number of other enhancements. Rich Barnett at ScannerMaster is one of the distributors.

All versions will do both 800 and 900 MHz trunking.

The board (plugs into a short ISA slot) and attendant software will let you track the Motorola trunked dispatch systems, Smartnet I, II, IIi, Hybrid, and Privacy Plus flavors.

The setup consists of a signal processor/demodulator board that is plugged into a PC slot (286 or better) and software that reads the data channel andcontrols the scanner (Icom R7000, R7100, R9000, R8500 or PRO-2006, 2035, 2045 w/OS456 and soon BC895). Also supplied is a CI-V compatible interface cable to connect the computer serial output to the radio. This means you don't need to buy Icom's expensive converter.

Unfortunately, manufacturers have not seen fit to bring the discriminator signal to the back of most radios. The discriminator signal and not the audio signal is required for input to the demodulator board. The audio signal has the low frequency components filtered out and the full bandwidth is required. This means most radios must be opened up and the discriminator signal tapped. I supply

a small postage stamp size circuit board buffer that installs in the radio and connects to the discriminator output. This makes the needed signal available. The mod is very easy to do and probably takes about 20 minutes. I wish it could all be "plug-and-play," but you've got to have the discriminator output.

The only trunking system information you need are the frequencies of the system repeater outputs. You do not need to have the system ID or any other information about the system, although if you have fleet map info it will surely help. There are a number of software features that make monitoring a system very convienient but basically you are able to watch all the talk groups in use scroll by and select one or several to track and or scan. You can also do a scan of all system activity and follow anything you find interesting. Each talk group can have an alphanumeric label associated with it up to 30 chars in length. Each time a talk group is scanned or tracked, the label, if assigned, is displayed. There is more but that's the idea of it.

With version 4.01 you only NEED the control channel frequencies, although you get enhanced functionality if you have ALL the repeater output freqs. In addition there is a mode of operation that, given the active control channel frequency, will find and list all of the channels in use by the trunked system. You can also step the radio through the trunked spectrum from the keyboard to find and track new control channels.

TrunkTrac (depending upon the version) can track up to four systems at once.

TrunkTrac works with 800 MHZ as well as 900 MHz systems.

TrunkTrac lets you see the trunked system activity scroll up the screen.

Each Talkgroup or Fleet-Subfleet ID can have a 30 character Aphanumeric tag attached so that when it is active the tag is displayed.

TrunkTrac properly handles Hybrid systems even when the Type II IDs occupy less than a complete block.

TrunkTrac can accomodate up to 300 lockouts/system.

TrunkTrac has 5 scan lists/system each capable of 22 entries for a total of 110 entries per system.

TrunkTrac has scan list "personalities" which are user defined and named sets of scan lists allowing rapid reloading of multiple scan list configurations.

TrunkTrac has lockout list "personalities" which are user defined and named sets of scan lists allowing rapid reloading of multiple lockout lists.

TrunkTrac has flexible ID formatting, allowing Type II IDs to be displayed in either decimal (Uniden) format or conventional Hex (Motorola) format.

Type I IDs can be displayed in either the Uniden format eg. 103-3 or Motorola format eg. 103-A. Additionaly the individual ID portion (if displayed) can be displayed in either hex or decimal.

TrunkTrac accomodates all the Type II T-bits and properly handles all Talkgroups involving them.

TrunkTrac has a temporary lockout feature which kills an ID for a user defined period of time, then reactvates it. This is shown visually on the screen as it is applied.

All time constants are user definable; Delay for Search Mode, temporary lockout, and each of the 5 Scan Lists time constants are independent.

There is a Freq Finder mode that only needs the single currently active control channel and will find and list all the other channels in use.

There is a System Finder mode which will let you step the radio through the spectrum looking for control channels. When a control channel is found it'll track and report the voice channels used via the Freq Finder mode.

TrunkTrac can operate with just the control channels if desired or with all the system frequencies for increased functionality.

There are Type I and II ID filters which prevent most of the garbage IDs seen by some users of the BC235/895.

TrunkTrac can track Private Call and Telecom interconnect type activity. (This is reserved for individuals in Public Safety or Govt. or who have system owner permission).

TrunkTrac has all the size code presets of the BC235/895. In addition programming fleet maps is much easier allowing use of either Uniden or Motorola style size codes and graphically displaying the resultant map.

There is a Priority Scan mode which will interrupt tracking of lower priority activity during the Delay period if any higher priority ID (user specified) becomes active.

There's more, but this should give you a pretty good idea of what it will do.

Greg Knox

The Calgary City Police Service is now using a new form of voice security for ALL of it's communications. This is a simple money grab just like the Multi-Nova scheme. They scramble everything and make the media rent out HT's capable of recieving the routine comms, and charge them $4000.00-a-year-a-radio rental fee. That's a rip off - and unprecidented in Alberta. Edmonton and Lethbridge dont scramble routine comms - Why should our "service"?

Our new system is Motorola. I'm getting a Trunk Tracker and I will post my results on the group and home page. Yes...there are 5 control channels, this is a Smartzone(?) setup.

If large cities like LA, New York, and Dallas, all feel that their routine comms should be accessable to THE WORLD on the net, why does Calgary need to keep these comms secret? WHAT IS OUR POLICE SERVICE HIDING?

Sorry if I missed something, I'm joining the discussion late. So,
what you're saying is it should look like:
| +
| + |

+	
	+	
		+	
	+	
+	
+	
+
+
+
Transmitter TV antenna

With the TV antenna elements pointing at sky and ground, and the short
side of the antenna pointed at the transmitter? (the +s are the pole
that the TV antenna is mounted on) Then it's directional, by pointing
the short side at different transmitters?

That answers a lot of questions. Thanks!

Well I have heard that Uniden is planning on releasing the BC9500,
basicly the same radio as the 895xlt with Alphanumeric display like the
9000. Don't know when its supposed to be out.

How 'bout making one. Make a "Tee", and use 1/4 wavelength transmission
lines for each unit. Theory is that a 50 ohm termination looks like
a high impedance 1/4 wavelength away. A short would look like an
open 1/4 wavelength away. Check out the Radio
Amateur's handbook or other sources for the simple formula that gives
the relationship between frequency, wavelength, and the cable's
propagation constant. Write me if you need more details.
Good luck,
Al N2NKB

Short story: Unit is 2 weeks old and I finally pass my HAM exam for General. I buy an HF transceiver rig. To pay for it, out goes the YUPI.

Great, great radio. All mode 531 Khz-2.06 GIGAHERTZ. 1,000 memory channels.

With box, manuals all the goodies included. Also has soft cover I will include.

Can't get it in US. Cost: $550/obo. I will throw in a Watkins wide range scanner antenna.

email me at craig_novak@abraxis.com

REPLY...

William, I am not trying to ignore you. Your message does not show up on my server. Cutting messages seems to be my server's solution to their newsgroup computer's overload. Therefore, I did not know your message existed until "The CB Guy" posted a reply to it.

Anyway, on to your message. I have no doubt I COULD learn morse. I just don't see when I am going to have the time to learn it. Right now, we are preparing for a extended trip overseas. Since we are likely to be over there for several years (the last time we went, we stayed for 9.5 years), we have a lot to do before we go (I could go into more detail but I doubt anyone really wants to hear it).

Perhaps, in a couple of years, I will find the time to learn morse. Until then, I'll enjoy what VHF/UHF has to offer. And I'll hang on to my trusty CB.

By the way (for those interested), CB is a blast in Europe. It is not plagued with the problems we have here. There is the occasional troublemaker, but it is rare to run into one. And it is a great way to meet the locals (we made many friends through our radio contacts).

Yes, Bill did use another name.
Is that what this has been about ?
I suspect that half the people using Usenet are doing so under assumed
names. And judging by the returned email I get, many are using false
email addresses.

Do you hunt all of them down?

Whose business is it anyway?
Frankly , I don't care what name a poster uses...as long as he/she
adds to the group's collective knowledge.
But, if it is illegal.....

To get back on topic : WinRadio works for me. I have been using it
longer than most and nothing Mr Cheek says about it is untrue or
misleading.
I cannot recall a post where Mr Mackey has offered a credible
challenge to Mr Cheeks assessment of WinRadio.....of course I may
have missed it in the flood of personal criticism.

The reason for code was because it could get through where voice, fm, whatever, would be unintelligible. It works great when almost all other modes are not useable. BUT the main reason I can see for keeping the code is to keep the amateur bands from becoming another Citizens Band. BTW I am a no code tech. Not by choice. I have a slight problem with detecting the tone shifts to the point that I cannot accurately copy code. However, I do not demand they do away with code so I can use the freq's. If you don't learn the code, just stay where you don't need it. See you on 6 meters.

Hi,

At this time there are no commercially available programs nor scanners
that can track GE/Ericsson EDACS trunking.

I suggest that anyone that would like this to happen should call
various scanner manufacturers (ie Uniden) and request they develop a
trunk tracker to acomplish this. If enough call, the EDACS trunk
tracker will become a reality :-)

Hi Everyone,

I live in Buffalo NY, and I use a Uniden BC200XLT. I'm looking for some active frequencies of anything military. I figured Niagara Falls would be my best chance. Anyone out there have something interesting?

Thanks!

3773. Sleuthing Trunked System?

Newsgroup: rec.radio.scanner
Date: 1997-11-10 00:00:00 UTC
From: derran@revenge.cuug.ab.ca
Message-ID: <126_9711100916@revenge.cuug.ab.ca>
Source record: 180738

I'm hoping someone here can give me the answer I'd most like to hear regarding the City of Calgary's new emergency services trunk. (Pardon my technospew mode while I explain things; it's a habit.)

Calgary Fire is currently moving from nine 413mhz freqs to this new system. Calgary EMS has just switched from a GE/Ericsson trunk to this new system. Calgary City Police switched several months ago from 15-20 462mhz freqs to this new system.

I can only presume that Police are on the same system with Fire and EMS because I occasionally (read: often) hear what I'd term 'data bursts' from the same frequencies that Fire and EMS are now on. I have heard confirmed Fire/EMS on the same batch of 29 frequencies, and these data bursts on all of these 29 frequencies as well as on 3 others within 866.0625 -> 868.9375. Fire and EMS are in the clear, plain voice transmissions; in fact, Fire is currently linking their transmissions with 3 of their old 413mhz channels for the benefit of those who have old-style radios still.

Fire and EMS are operating on a single set of channel and group numbers. Group A appears to be entirely for EMS, and groups B and C are for Fire use. There are 16 channels within each group. This seems to correspond to the 16-channel selector on a regular Motorola radio used in concert with the A/B/C function selector switch.

Obviously I haven't been able to hear what the police are calling their channels.

I have confirmed that the brand of radio that the police are using are Motorola Astro units; however, I have also confirmed that the radios that Fire and EMS are using are identical in outward appearance to 'regular' Motorola mobiles and portables (comparable to the ones my own fire department uses on our 413mhz system).

Finally, although the Canadian government publishes a list of radio licenses, this system did not show up in the most recent list, probably because it is shared by the police and protected systems like the police are excluded from the list.

I have several questions I hope someone can answer, when armed with the above info:

1. What type of trunk system is this?

1a. (most important to me) If I bought a TrunkTracker, would I be able to track this trunk system, as far as Fire and EMS go?

2. I believe I know all the frequencies that Fire and EMS are using. Within the limits I mentioned earlier (866.0 -> 868.9), I have found five Motorola style control channels (or what sounds like them; continuous data, in any case). Is there a way I can figure out which is the right control channel? Ie. if I toss out 866.0375, 866.1375, 866.2375, 868.2125, and 868.2625, can anyone tell me which frequencies 'normally' are associated with the above data channels?

2a. I am hearing rigs on three frequencies within the batch, simultaneously broadcasting identical transmissions. The first three data channels listed above (the 866.x ones) are all roughly equal in strength. Is it possible that I'm actually hearing three trunk systems that are linked together to provide good coverage citywide, and if so, what can I do to figure out which is which?

Thanks very much in advance.. if I haven't posted sufficient information to get the answers I've requested, someone please tell me what else you need to know, and I'll try to get it.

I would really like to be able to TrunkTrack this system--the SCAN key on my PRO-43 is wearing out from skipping all the data bursts from the police radios!

I went into the military in 1973. Sometime around 1981 they recalculated the skill qualification exam scores giving me and everyone else higher scores. Tell me that ain't lowering standards.

In the particular field I was in, it was obvious scores were substandard. The washout rate was tremendous.

As far as standards being lowered in Amateur Radio, that happened when the question pools were published and VEC's formed. Not that there is any major problem with current VEC's, they are very respectable.

Anyone can learn the code if they put their mind to it. Those pro-no-coders spouting off about how the garbage on 3853 et.al, including 20m freqs is filled with errant ops try to make their point that cw is not a lid filter and they are correct. But, since the publishing of question pools the lid population has increased immensly. I have no statisics to post here but listening now and remembering then and comparing the two....it seems more widespread now than ever.

The only RS one worth considering IMHO, is their 500 mW model FRS-106. I looked at them, and the "flip" is very cheap, and easily broken off, etc. Other than that, it probably is a good radio. Why RS even bothers makeing Family radios that are not a full 500mW is beyond me!!!!!!!

I'm not aware of this law.

In Canada you cannot repeat what you hear, rebroadcast it (in any
fashion) or use it to generate revenue.

And I'm not aware of ANY of the above laws being enforced. Every tow
truck you see on the road in Toronto has more receivers that Nasa!

As far as intercepted phone calls being used as "evidence" in court.
Only under one condition are they admissable and that is if at least one
of the parties in the conversation is aware that the call is being
monitored/recorded.

.....but then again, "anonymous" tips seem to be admissable evidence in
court.....

Richard-

I live in an area which experiences a few tornados a year. Tornados are extremely localized, so if one took out a rptr, which is unlikely, there would be 50+ more to use, several of which I CAN hit from my basement.

You sound like a someone who thinks one size fits all and since you're that size...

Well if that's true, I think you MUST learn to set up network routers because a small fraction of amateur traffic passes through them since it originated on packet. Or give up your ancient based license. It's as sensible as your argument.

Amateur radio has always been about _leading_ the communications pack. WE came up with SSB. WE came up with how to use satellites to locate down aircraft/lost parties.

The first means of communications we used was Morse.

It sounds like you're among those who can't keep up.

>
> I've used a cell phone in an emergency. I wouldn't have gotten a tow
> truck or ambulance via morse code! Why would the outside VHF antennas
> be gone? Besides, I have some VHF and UHF antennas inside.

Correct. It will eventually get through, unless you're foolish enough to waste the battery pack in one shot. There was a woman in ND (I think it was) last winter that got lost in her car with her cell phone, and they found her by having her make a call while an F-16 flew over the area; they found her. Try that on 80.

I fail to see how code would be worth anything at all here. Please explain.

I will also bet you any amount of money you'd like that I can make an antenna that radiates efficiently on 2 or 432 with what's available in most any basement, and that you can't do the same for any HF band, except maybe 10, which no one is ever on, except at the solar peak. And if you could get something to radiate on 80, 40 or 20, then on 80 they're too busy using 2KW to talk 1 block, 40 there's megawatt AM, and on 20 if you can't do 40 WPM, no one would condescend to work you.

>
> > HF and CW is a joke.
>
> There are lots of jokes much funnier.

Fine, tell me a couple. I always like a good joke. I'll be the judge of whether they're more amusing than CW, which even the Navy has abandoned.

Show me that more than .00001% of emergency traffic is done with CW. You can't, because it isn't. It's on SSB on HF and FM on 2 and 70 as well as packet on both.

Go to www.anawave.com and download Anawave Gravity.You can set your filters
to run automatically or manually.You can choose the action when filtering
ie. mark as read,mark as important,delete,show warning,play a sound,etc...

Have an excellent shape *ICOM IC-R7000* Professional grade Monitoring Reciever.
Includes Original Matching External SP3 Speaker (mint cond never used it).
Speech Synthesizer Option Built in.
Has Scan Speed Increase Mod, Extra 100 Channels Mod, Discriminator Tap & SCA Audio Mod.
Everything functions Perfectly, all knobs, buttons, display, audio, etc... is/are in perfect working order, no faded markings, letters, numbers - low mileage - never used outdoors.

Includes AC Power Cord, Phono-1/8" Cable, Manual, Original Boxes & Packaging.
Makes a super Software controlled reciever system for Monitoring/Logging/Surveillance/SETI use...

** SELL FOR $999.00 + $50.00 Shipping **

EMAIL; jg@izap.com if interested.

IC-R7000 SPECIFICATIONS
GENERAL

Frequency Coverage (U.S.A., Europe, Australia): 25.0000 MHz to 999.9999 MHz, 1025.0000~ 1999.9999 MHz Mode:
SSB (A3J) AM (A3), WFM, FM (F3) Tuning Step Increment: - 0.1, 1, 5, 10, 12.5, or 25 kHz.
Power Supply Requirement (U.S.A): 117 V AC +/-10%
Usable Temperature Range: -10C ~ +60C; +14F ~ +140F
Dimensions: 286(W) x 110(H) x 276(D) mm, 11.3(W) x 4.3(H) x 10.9(D) in
Weight: 8.0 kg; 17.6 lb.
Sensitivity: 25.0000 MHz~999.9999 MHz SSB - Less than 0.3 V for 10 dB S/N AM - Less than 1.0 V for 10 dB
S/N FM - 0.5 V for 12 dB S/N FM(Wide) - Less than 1.0 V for 12 dB S/N 1240.0000 MHz~1300.0000 MHz B -
Less than 0.3 V for 10 dB S/N AM - Less than 2.0 V for 10 dB S/N FM - 0.5 V for 12 dB S/N FM(Wide) -Less
than 2.0 V for 12 dB S/N
Selectivity: SSB - More than 2.8 kHz/-6 dB, Less than 11 kHz /-40 dB AM, FM - More than 15 kHz/-6 dB, Less than
40 kHz /-40 dB AM, FM(narrow) - More than 6 kHz/-6 dB, Less than 18 kHz /-50 dB FM(Wide): More than
150kHz/-6 dB, Less than 380 kHz /-20 dB
Audio Output Power: More than 2.5 W at 10% distortion with an 8 ohms load.

RF Connector: "N" type connector (female).

OPTIONS

EX-310 VOICE SYNTHESIZER UNIT: Provides audible, synthesized readings of frequencies in English. $ 129.00
SP-3 EXTERNAL SPEAKER: External speaker. Matching style and size with IC-R7000. $ 172.00

I am aware that I need a license but I am first evaluating whether or not it is worth it...will the whole "package" of the license, transmitter(s), antennae, power supplies, etc. be worth the cost? What I am trying to accomplish is a sort of winter comm. system between myself and two other groups around a local mountain. By using the common FM band, one will be able to hear what everyone else is doing even if the individual is not equipped with a transmitter. We have used CB for 2 seasons but found that the terrain and variables such as different vehicle types, power lines, etc. cause far too much problems for effective communications. I should revise my request to ask to be referred to where to purchase quality inexpensive FM transmitters.

3803. Trade Kenwood R5000 for Icom R7100.

Use my Weather Website along with your scanner when stormy
weather breaks out in your area!

The Dawley Homepage(weather page) at:

http://www.geocities.com/ResearchTriangle/Lab/4419/

is now ready for your use!

Maps and weather reports are easily obtained to help you keep up with the
weather.

When storms come through my area, I turn my scanner on,
go to my weather page, and know what is happening!

Fire, Emergency Operations Center,Police and Sheriff frequencies all
report the progress of the weather event by eye-witness reports and
official bulletins.

I have push-button access to these items on my weather page, and
feel secure knowing that I have all possible information on the
storm in front of me!

Give it a try!
Thanks,

Michael L. Dawley

Regency M400: 30 channel replacement for K500. Service Search, but
no aircraft. Easily programmable out of band. Built in clock
when radio off or in manual mode. Backlit keyboard good for
night viewing and mobile use but generates RFI into nearby
SW receivers. A favorite.

>Can someeone fill me in on the details.

Yes it is different than the trunker.exe program that was distributed on the net. Synthecomm Inc. is the developer of TrunkTrac and it interfaces with Realistic PRO 2005/6/35/42 with the Optoscan board, as well as the ICOM R-7000, 7100, 8500, and 9000.

Scanner Master will be marketing the program (which is both hardware and software based). 1-800-SCAN-701

Get a copy of "POLICE CALL PLUS"
After reviewing numerous sources/listings for the San Bernardino County trunked radio system I have found it to be the mos accurate source. I am not merely posting information from "Police Call Plus". I did not refer to it untill I had completed target scanning to include signal stregnth, bearing, etc. No I do not have a Trunk Tracker; but here in Twentynine Palms I have less than 11 frequencies to monitor to cover the local area when you weed out the control channels. Fire is simulcast on the 800 frequencies but there is still heavy use of the CDF 151/159 and county 154 Mhz frequencies. As for the Marine Base; most have moved over to the base 400 Mhz trunked system A few remain on conventional frequencies such as range control, aircraft, paging, etc. If you wish further info E-Mail me and if I have it I will get it to you.
If there are others out there around Twentynine Palms; please let me know so we can share info and not duplicate effort.

Best Reguards,
Jerry

3811. GE/Ericson trunking scanners?

Newsgroup: rec.radio.scanner
Date: 1997-11-10 00:00:00 UTC
From: Anon <amidol@gte.net>
Message-ID: <645smt$mj8$1@gte2.gte.net>
Source record: 180801

Perhaps I missed a post on this subject, but I was curious if anyone makes a scanner capable of following trunked 800 Mhz channels that use the GE/Ericson radio system, or has anyone heard of anyone coming out with such a scanner.
The agencies that I want to listen to in my area use the GE/Ericson system and even though I can monitor them (at least for now, barring digital) I would like a scanner that is angled towards the GE system as other's are towards Motorola.
Thanks for any information given.

Hey Skippy! I thought you were gone. You've come back to play or
did you just think John needed some help? Bill made it pretty clear
(at least to me) that he wasn't a WiNRADiO representative. You kept
referring to him as such and he questioned your grasp of the language.
You baited him and he gave you what you wanted. I thought you had it
coming really. I reserve the right to be selective in my criticism.

Being you and I are brothers in arms, of sorts, I really have no desire
to engage in a public pissing contest with you but since you chose to
return, howz about your apology for calling me a liar?

It's considered bad form to quote someone's sig. in a reply.
Especially a long one like mine. That's what the cut line above
it is for.

This is an exceptional toy. Gets past metal detectors at airline check points and is very accurate--I'm speaking of the frequency counter.A limit is that only 3 frequencies, plus the lated "hit" are recorded, and there is no sound cue when a hit is detected. Accuracy is very good; an adjustement screw appears to be included on the back cover, but I haven't needed to adjust it just yet given my knowedge of FCC frequencies.

Fine tool.

Hi, Don:
IMHO, from the tone of your post, I don't think the ham bands need
anyone of your caliber either. Their is room for all: Amateur Radio
is not an exclusive club lorded over by elitist dictators (though some
would have us believe that is the way it is and the way it should be).
And Amateur Radio is not about "earning" -- anything. If you believe
those things, then, IMHAPO, if there is anyone who needs to "get a
life," especially when it comes to enjoying Amateur Radio, sharing
this planet and getting along with others, it is yourself.

> I am aware that I need a license but I am first evaluating whether or not it is worth it...will the whole "package" of the license, transmitter(s), antennae, power supplies, etc. be worth the cost? What I am trying to accomplish is a sort of winter comm. system between myself and two other groups around a local mountain. By using the common FM band, one will be able to hear what everyone else is doing even if the individual is not equipped with a transmitter. We have
used CB for 2 seasons but found that the terrain and variables such as different vehicle types, power lines, etc. cause far too much problems for effective communications. I should revise my request to ask to be referred to where to purchase quality inexpensive FM transmitters.
>

The FCC has no mechanism to license such low power transmitters on the
standard FM broadcast band for individuals (I believe, but could be
wrong, that educational entities can do so).
There are other way to do this, and most would cost less in the long run.

I've used a cell phone in an emergency. I wouldn't have gotten a tow
truck or ambulance via morse code! Why would the outside VHF antennas
be gone? Besides, I have some VHF and UHF antennas inside.

I was a police officer from 1978-1991 and I'm really glad that they did lower the standards somewhat. I never did like having to qualify on the range with a musket and flintlock. :-) That really isn't a good argument for code. Police science has never had a problem with modernization. You know...adopting new technologies when they are present and letting go of old antiquated practices when they lose their effectiveness.

Really, is showing your prejudice against affirmative action and job performance based selection criteria a good argument for keeping the code? Are you saying that the non job performance criteria that was used until 1973 to keep minorities off the force is equivalent to what Morse code is today? If so, that is a really bad analogy to use and doesn't do much for your argument. If you had to work with a woman, even though she couldn't drag 300 lb.. for a distance of 50 ft. across the parking lot, you need to get over it. It was 24 years ago and history has now proven that they (and other minorities) really can do the job.

The bottom line is that, if Amateur Radio was a job and not a hobby, the Morse Code requirement would have been dropped already. It is not an indicator of performance, it's not necessary for effective radio operations, and is only used as a means to keep people from using the frequencies. In the real world of business using such a filter would never fly. Selection criteria has to validated as performance related! Morse Code simply doesn't meet that standard.

The only thing saving it in the US are the international agreements and they will change. Mabey not the next one, but sooner or later progress will occur. Other countries have already started a move to do away with code and some are ignoring the agreements altogether.

>
> I went into the military in 1973. Sometime around 1981 they recalculated
the
> skill qualification exam scores giving me and everyone else higher
scores. Tell
> me that ain't lowering standards.

Hello!!! Until 1971 the US military had the DRAFT. Pretty stiff qualifications there. Let's see now...you had to be born...be able to see...have two feet...and didn't have enough money to go to college or Canada. You didn't even have to want to join! Yep, pretty stiff standards. Strange how when the military actually gets around to doing what they are chartered to do (kill people) the standards fall right through the floor.

>
> In the particular field I was in, it was obvious scores were substandard. The
> washout rate was tremendous.

As I recollect, the standards in 1973 (when you went in) were pretty stiff too. They even started requiring that about half of the new recruits had a high school diploma didn't they. Of course the recruiters told people that they could be a nuclear engineer or a brain surgeon. Then when you washed out of school, they put you in combat arms or made you a cook. The washout rate was planned. In advertising it's called "bait and switch". Not legal in the civilian world but we aren't talking about the civilian world. Plus, it saved them that 2-10,000 dollar sign-on bonus for combat arms.

Once again, the military is not a good example to use to justify a code requirement. They don't still use or train infantry to use the flintlock. The calvary doesn't have to learn how to ride a horse. Radio operators don't use Morse code. Even the military will let go of antiquated technology after it's time has passed.

>
> As far as standards being lowered in Amateur Radio, that happened when the
> question pools were published and VEC's formed. Not that there is any major
> problem with current VEC's, they are very respectable.

Adult educational theory dictates that training is done to impart the knowledge of specified skill sets. The purpose is to teach someone how to perform a task. This is done by letting the student know up front what the objectives of the training are. Letting the students know what skill sets they need to master. Teaching those skills. Then you test them on those skill sets ensure that you, as an instructor, have given them the necessary knowledge to perform the required tasks. It's a win-win situation for everyone involved. Training is not about culling out the weak or those who can't guess what kind of questions the instructor will be asking on the tests. It's about imparting knowledge. Given the severe lack of amateur radio operators who are willing to take the time to volunteer to teach new people, publishing the test pools so that people could teach themselves appears to have been the best answer.

The bottom line is that it's performance based. The purpose is to ensure that the student learns the skill. Giving either a question pool or a clear set of specific training objectives that will be tested to the student before the training takes place, is common to all adult training

programs and works very well when teaching both simple and complex tasks. It's used all over the world and has proven to be effective. Training and testing should be an objective measure of imparted skill sets. It should not be a filter to keep people out of a particular profession or hobby. The bottom line is that the standards weren't lowered, but a more effective means to meet those standards was adopted. I think that this showed progressive thinking on the part of the FCC and that they should be commended.

Well that's an objective observation. There are more lid's on the radio, but then there are more people on the radio. One percent of 1000 people is 10. One percent of 100,000 people is 100. No one in their right mind would argue that there aren't more lids on the radio. I wouldn't even argue that it can't be accounted to providing a more effective method for people to get licensed. However, I will argue that the solution is NOT using the code to keep people off the bands. Part of the solution is the use of effective enforcement to catch and prosecute those who break the law. The solution is for amateur radio operators to take the time to teach new operators the practices and protocols that are expected on the respective bands in a manner that is not offensive to the amateur being taught. Don't sit back and wait on the new guy to mess up so that you can correct him to enhance your own ego at his expense. I see a lot of that going on. The other solution is to give the bands to business interests. No amateur operators = no lids. This is not a solution that either side wants to see.

Lid population increases in direct proportion to the general population on the bands. Percentage wise, it's probably about the same ratio. What others are trying to point out is not that there are lids on the radio. What they are trying to point out is that there are lids on the Advanced and Extra portions of the bands. The argument being that a knowledge of Morse Code is not an indicator of performance. Seems pretty self-evident to me that this is true.

In fact, based on equally valid personal observations, I would venture to say that the lid to operator ratio in Advance/Extra portions of the bands

is significantly higher than it is in the VHF/UHF bands where no-code Technician's are prevalent. Of course given the greater range of HF communications a few lids can go a long way.

As to your assertion that anyone can learn code, I tend to agree with you. The vast majority of no-code Technicians can learn code. I would even venture to say that most can learn it with relative ease. The question then becomes, why don't they do it? Some people say that they are lazy and don't want to put forth the effort. However, these are the same people who put forth the effort to study and take the test. They spent thousand(s) of dollars on equipment the they had to work to earn. They frequently volunteer their time and effort to ARES and SKYWARN training, drills, and exercises. Usually spending money that they had to work to earn in the process.

The problem is not laziness. The problem is that those who promote Morse Code as a requirement have not presented a rational argument as to why they should need to learn the code. Given the fact that all other radio services in the US have dropped it as a requirement and no longer use it, the necessity for code looks more dubious all the time.

Arguments like "the ARRL took a poll and we decided that you should do it", "it's the best digital communications around", "it's required by international agreements" and "if there is a earth quake and all other communications are destroyed, you can still communicate using a capacitor" are not convincing. If there are valid reasons to learn code, convince us of the need and the argument will go away. Long time no-code technicians are not stupid or lazy...they are just unconvinced of a need.

So long as no one presents a valid reason to learn code, those who will not blindly go where everyone has gone before will continue to petition the FCC and the ARRL for a productive change in policy that allows a more effective use of the frequencies by the majority of qualified amateur radio operators. Sooner or later the government will recognize the validity of the arguments presented by both the no-code technicians and those with advanced licenses who recognize that the time for a Morse Code requirement has outlived it's usefulness.

BTW..I'm posting this from alt. radio.scanners. I have tried for two years to stay away from this never ending argument. I unsubscribed to the amateur radio NG's, but it just keeps following me. That's OK. I like spam sandwiches myself.

BTW Carl, I haven't talked to you in years. What's this I hear about an organization to promote dropping the code requirement? How do I join? I can't hide from it so I might as well join in.

The audio coming out of your speaker jack is alternating current (AC). The meters only respond to direct current (DC). In order for the meters to respond in the way you envision, you must first convert the AC audio into DC and filter it just a bit. Do not connect your meters directly to a battery as you will burn them out. If you want to attempt to make your meters work and don't mind buying a few more parts at radio shack, e-mail me and I will send you a couple of schematics that may work for you.

Looking to purchase my first HH scanner, and I am looking for input. I am interested in 3 models at present, but if someone has info on another unit that they feel would be a good feature/value unit, please let me know. I am interested in the following units:

Radio Shack Pro-64, on sale now for $199.00
RELM HS-200 about $240.00
Uniden BC235XLT about $260.00

Any reviews, Pros, Cons will be greatly appreciated.
Please respond via E-Mail

Thanks,

Mike Stewart

From: duane.vincent@greymatter.com
Message-ID: <879290387@greymatter.com>
Source record: 180628

For a decent 800 mhz antenna, drop by a shop that installs cell phones.
Chances are they have a pile of antennas removed from bag phones that
were installed permanently with car top antennas.
Add a female mini-uhf to male bnc connector, and there you are...

An alternative would be your local Rat Shack for a replacement antenna,
but that still leaves you with the need for the mini-uhf/bnc adaptor,
which I don't think Rat Shack carries.

The other reason could be a live remote broadcast. I used to work for the local station here in Waukegan, IL. I don't remember the frequencies off the top of my head, but the UHF transmitter was in the 450 range and the VHF transmitter was 140-150 range. We'd use these to beam a signal back to the station's UHF/VHF antennas on our transmitter towers. This was in turn run through the board in the studio and pumped back out our whopping 1,000 watt transmitter.

Hope this helps.

Regards,
Rob

From what I've seen the software from Scanner Master
doesn't even support the Trunk options of the scanner.
You can do alphanumeric tagging in conventional mode.
Nice of them to let the buyer know this beforehand. If
I had known this I wouldn't have even purchased my unit,
but I'm sure this was the intention on behalf of Uniden.
Thanks again Uniden for supporting Scanner Master!

AR 2700 handheld scanner for sale.

500khz-1300Mhz (no gaps, receives full 800mhz). NFM, WFM and AM
VFO. 500 channels in 10 banks. Perfect condition, manual.
Asking $250 and I will pay for COD shipping. It also has the
ability to be hooked to a computer so that it can be controlled
via computer. Email modchip@mindspring.com for more info.

Here's a suggestion.

I'm mostly a Uniden-Bearcat scanner user, and Radio Shack's new Trunk Tracker is exactly the same as the BC235XLT, and both are around $300.

Go for the Uniden-Bearcat Trunk-tracker...that way, you can get the complete package...radio, antenna, AC adapter, two battery packs and a battery charger, along with the manual and other things. The Pro-90 only comes with everything EXCEPT the extra battery pack and battery charger.

>As is your post here, a waste of bandwidth!

Did you really need to flame the writer? Aside from that, I will say that
yes, code is slow and inefficient.
It is, however still useful because it still works when other communications
don't. I don't feel that code necessarily needs to be a requirement for
licenses, as they do not necesssarily made the amateurs better operators.
It does, however, work when other forms of communication are not possible,
including for stroke victems in person.

Was in Radio Shack today to look at the PRO-90 and they will give you 10 percent off the $299 price if you get a credit card. Not really much of a deal if you consider that you can get the BC235 for $40-$50 less.

US Radio is advertising the scanner for $249 including shipping (at least that is what the ad seems to imply--I would check closely because they once screwed me by inflating the shipping cost for a scanner I bought from them). 800-433-SAVE

Dave, if that is true and you can get a doctor to validate it, then you can get an F.C.C. waver for the code portion of the tests. I have a friend here (call withheld for obvious reasons) that went that way and he now holds a general class licenses without having taken the CW test. Boy did that stir up the good old boys around here.

Do you really think that this is true?! Do you think that microphones were around first, and THEN they invented code because it could "get through" better?!

The fact is, code was invented because they didn't invent or have microphones yet. Once they invented Mics, the code slipped away, and telegraph poles were replaced with telephone poles.

Add Honolulu to that list. I recently purchased my first scanner, a Pro-60, for the bargain price of $199. My main reason for buying this scanner was to listen to the Honolulu Police Department.. First, I searched in the VHF Lo and Hi bands, then UHF, and finally I checked out the 800 MHz band. I was looking forward to scanning when I noticed a distinct set of beeps after every transmission. I thought this was "normal" for trunking systems and was on my way to selling off my Pro-60 for a BC 235XLT when I began reading these newsgroups. It turns out its one of those evil GE/Ericcson systems which are next to impossible to monitor. I am moving soon so to buy a GWhiz board would be a waste of money. My point is to warn vacationers who visit our lovely state to leave your scanners at home. It is not worth the frustration I have suffered through trying to follow the police.

Dwight, CB in Europe sounds like the way it was here when I was still
in high school (I didn't get my Novice ticket until graduating from
college). It was really fun back then with many operators but no
jamming, cursing, hogging channels, etc. I did not operate CB for many
years after high school and was totally shocked when I got back on.
After a few weeks I quit it for good. Unfortunately, now there are many
ham operators who have adopted CB habits for the ham bands, too, but it
still is a good hobby. I enjoy all aspects, from phone, packet, cw and
even am and I think it is worth it to get the code requirement out of

the way.
I learned 5wpm in my spare time while going to college at night, working a full time day job and trying to raise a family. I encourage you to squeak in a few minutes each day if possible. I'd like to visit with you on hf while you are overseas. Good luck, in any event.

Well, that's not exactly correct. The 13 WPM and 20 WPM code exams
can be waivered with a "valid" doctors exemption. The 5 wpm exam
must be passed. There are a number of ways that this can be done,
with lights, vibrating devices and in extreme cases, a sending test
can be given.

: help you in a court of law.

Of course not. You're not in a Constitutional common law court. You're in an "admiralty court" or "rule of law court". The code of law is what is enforced. It makes no difference that you harmed no other person or their property! In your example you would be charged with violating the "gun permit" law. Forget what the second amendment says. And be sure to hire a good lawyer. They seem to be the only ones that work in our entire Judicial Branch of government! And only after years of experience can the be selected to be judges. So much for the peoples court! Our judicial system is of the lawyers, by the lawyers, and for the lawyers!

Peace...jc

I listen to two sometimes three portable scanners at once, so I saw a need to visually see my vol control so I purchesed a couple of vu meters,hooked them inline on my external speaker wires thinking this was my solution, no so, I assume the portables do not have the power to push the meters. Has anyone run across this and have a solution to using vu meters with portables?

Hi Paul,
There are a lot of models available today with a lot of
different features that cover a wide range in prices. You
should educate yourself on the basics to help narrow down
the playing field a bit.
Take a look at a page I recently posted to my web site
titled Picking A Scanner/Receiver

http://www.qsl.net/n2mca/PICKRECV.HTM

That should help get you going. You might also want to
take a look around my main radio page

http://www.qsl.net/n2mca/RADIO.HTM

and see what you can find.
Once you have some definite goals in mind, we can then
work on picking out the radio whose features and price are
right for you.
Feel free to e-mail me if I can help answer any
questions. Good luck and happy reading!

Strong signals,
Rich N2MCA http://www.qsl.net/n2mca/

3874. Your Scanner Opinions

Newsgroup: rec.radio.scanner
Date: 1997-11-11 00:00:00 UTC
From: Rich Wells <wellsr@ibm.net>
Message-ID: <3468C0ED.3C46@ibm.net>
Source record: 180714
Cross-posted to: rec.radio.scanner,alt.radio.scanner

Attention All Scannists,
In an effort to provide everyone with the best knowledge available for purchasing a scanning radio, antenna, book or piece of software, I have created a User Opinions page. This page exists for you to post your personal reviews and thoughts of scanning related items.
I ask each and every one of you reading this message to consider the knowledge and experience you have gained from your monitoring and put it towards helping this effort.
No one expects a thesis to be written. Just your honest comments on what you do and don't like about a particular product. It can take but a few minutes yet make such a large impact to those of use who will make use of it.
To anyone who has ever used the Internet to do research before making a purchase, I think you can see how valuable a resource such as this can be.
Several people have already been unselfish enough to post their thoughts about items they have used. I thank you and hope that others will follow your lead.
To learn more, point your web browsers to

http://www.qsl.net/n2mca/OPINIONS.HTM

A few articles have been added recently and I urge the rest of you who may be considering submitting your opinions to just do it!
Thank you for your time and consideration!

Strong signals,
Rich N2MCA http://www.qsl.net/n2mca/

> those do not fit. It is almost like the BC235 uses a male/female hybrid
> BNC. WHY????

Probably because the center post of the antenna BNC connector has
broken off in the BNC connector on the scanner. There have been a
number of complaints on this. It happened to me too. Give that a
look-see. Best advice is to dump the original crappy antenna and get a
better one. Or if you choose, Uniden will replace it free of charge
with another original crappy antenna.

3879. FS: $75 UPDATE-WOLLENSAK STEREOPHONIC COMPACT REEL TO REEL TAPE RECORDER

Newsgroup: rec.radio.scanner
Date: 1997-11-12 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <64d29jimg11@csu-b.csuohio.edu>
Source record: 180519

UPDATE DUE TO RESPONSES.

WOLLENSACK STEREOPHONIC COMPACT REEL TO REEL TAPE RECORDER

Due to the responses I received for the unit at $75 or best offer--after some thought I decided the best way to handle it was to take the best offer over $75 and set a deadline instead of going back and forth with each interested buyer. This will be the fairest way to handle it I hope & less inconvenient for potential buyers. I am posting this for those who have responded whom I have not gotten to yet.

There will be a deadline for offers and the highest earlier offer if equal to the later offer will get the unit. Honestly, I was totally amazed, because when I first posted the unit, I received few responses. It's a great high quality portable recorder, but I am amazed.

DEADLINE FOR OFFERS:

-- THE DEADLINE WILL BE SATURDAY, NOVEMBER, 22, 1997 AT 12:00 MIDNIGHT EASTERN STANDARD TIME. THE MINIMUM OFFER CONSIDERED WILL BE $75.00.

1. I will try my best to keep those posted that make offers as to what the highest current offer is while keeping the name and email address of that individual anonymous for privacy reasons, but I can't guarantee that I will email everyone on time to update them on offers. I will try my best. So if you're interested in the unit make your best offer if you wish at the outset.

2. I ask that if you wish to increase your offer that you do so by at least $5.00.

3. For those who have made current offers, you may wish to standpat with your offer. After all, some who make higher offers may not have the money when the time comes. In that event, the earliest person who offered the next lower amount will have an opportunity to purchase the unit.

4. If possible, I'll try to post to the groups the current high offer too as time permits.

WOLLENSACK STEREOPHONIC COMPACT REEL TO REEL TAPE RECORDER

It's the stereo version of the monophonic model 15-70.

Nice sounding and running unit for it's age.

Mostly chrome or stainless steel case. Metal speaker grill has some light rust in parts that can be easily taken care of to make it perfect.

Dual 3 3/4 & 7 1/2 IPS tape playing speeds.

ILLUMINATED COMBINATION KNOBS:

- Volume/Auto. Record Level

- Tone/Treble/Bass/Off

- Record Level Meter

INPUT JACKS

- Radio/Phono

- Microphone

OUTPUT JACKS

- Speaker Switch/Record Only

- Accessory Amp

- Earphone/Speakers

TRACK SELECTOR CHART IN UNIT'S COVER

- 2T monaural or stereo
- 4T stereo
- 4 monaural tracks

(It does not have 1/4 track or 1/2 switch, so this labeling is confusing to me)

Has standard record, play, rewind & forward controls

Cannot get the digital tape counter to work is the unit's only short coming. I would guess that's an adjustment and I'll leave that to the buyer.

Handles 7 inch reels.

Has no stereo microphone with it.

Do not know if it's tube or solid state. Can't look inside. Don't want to take apart a unit that is running fine.

$75 or best offer--plus shipping and handling which won't be much, because I'll pack it free.

3880. Service Manuals Available Again !!

There is in fact a policy. I have a copy of it next to my computer.

At 8:15am Pacific Time, Nov 4, 1997, I called 800-theshack to inquire why I couldn't get a service manual/schematic for my Pro--2030, Model 20-407. (This call was follow-up after my local store said a manual for that model, and two others, were not available).

I was told the manuals were restricted. I asked by whom? They read me a memo, then faxed the memo to me. The memo reads, verbatim:

------beginning of memo-----

From: Candy Kothmann [Director of the Ordering Center, fax 817-415-2651]

Sent: Tuesday, October 14, 1997, 3:57pm

Source record: 180521

Could someone fill me in on the details of the program TRUNKER.EXE?

Does this work buy using a soundcard as a decoder for the trunking codes/signals?

Will it also control a computer controlled scanner like the AOR 2500/2700/3000A/8000, Opto 456/535, Icom R10/PCR1000/R7000/R7100/R8500/R9000 and Winradio to follow the target user on some scanners?

Does it only use the speaker jack without taking an output from the discriminator jack (have to add this on most radios)?

What's the difference between the TRUNKER.EXE and TrunkTrac Programs?

Which, compared to the other "popular" mode on HF -- SSB -- it wins
hands down.

>Except for
>some exceptional operators, it doesn't get through noticably better than
>analog voice.

It doesn't take an "exceptional operator" to use APF, a notch filter, and
a 250khz crystal filter to weed out unwanted signals.

>Morse definitely doesn't get through better than a well implemented
>digital mode such as Clover or PACTOR II. They can work with signals
>an operator cannot even detect by ear.

What's even funnier is that even all these fancy digital modes can't
copy a signal that DOESN'T EXIST. And, if you decide to use one of
these fancy modes, that's precisely what you will be listening to
99% of the time, because >hardly anyone< uses them!

Enter the world of amateur satellite communications with AMSAT - Radio Amateur Satellite Corporation. Satellites are amateur radios highest frontier and you can be a part of it. Like working DX but hate poor HF band conditions? Work DX via satellite and leave all be qrm, qrn & qsb behind. Like Digital modes? Upload a message to a pacsat and in 45 minutes a ham on the other side of the world could read it and respond to it. You can leave a message with the cosmonauts on the Mir space station or talk to the astronauts on the space shuttle during SAREX missions. You can also play a part in helping AMSAT complete it latest project, the Phase 3D satellite. Phase 3D is ham radios largest and most complex satellite to date. Construction and testing of P3D will soon be complete. Ham radio satellites mainly operate above 144 mHz, so you won't need a fancy ham radio license to use them. A tech class license will work just fine.
Of course you don't need to be a member of AMSAT to enjoy all these things, But your membership will help keep present and future projects going. If you've decided you won't join Amsat at this time, but would like to donate to Phase 3D. You can send your contribution to:

AMSAT-NA
850 Sligo Ave. Suite 600
Silver Spring, MD. 20910-4703

or call Martha at Amsat: (301) 589-6062

For more info about AMSAT and Phase 3D see: http://www.amsat.org

Source record: 180529

Anon (amidol@gte.net) wrote:
: Perhaps I missed a post on this subject, but I was curious if anyone makes
: a scanner capable of following trunked 800 Mhz channels that use the
: GE/Ericson radio system, or has anyone heard of anyone coming out with such
: a scanner.
: The agencies that I want to listen to in my area use the GE/Ericson system
: and even though I can monitor them (at least for now, barring digital) I
: would like a scanner that is angled towards the GE system as other's are
: towards Motorola.
: Thanks for any information given.

The CCC-ScanSys for the Realistic PRO-2006 and 2035 model
has a "AUTOMATIC CONTROL OF TRUNKED GROUPS". While it
does not decode any trunked signals it does use a smart
way of finnding out which channel is the data channel and
locking it. If the data channel changes, it automatically
changes it, etc. The software is specially written to use
while monitoring trunked systems.

It should work with any trunked system.

If you like more info please email danielz@ix.netcom.com
for more information.

Look in the "Radio Amateur's Handbook." (Published by the ARRL). This can probably be found at your local library. If it is not there, request it on inter-library loan.

There is a diagram in this book for a CT-17 equivalent device using a MAX-232 RS-232 driver/level converter IC.

Source record: 180546

I have a BC-760XLT with a date code of OICD. I have tried the following mods but still can't seem to open up the 800 Mhz capability.

Mod 1- Connect pin 19 to 20
Mod 2- Mod-41 from the scanner mod book....involves some pin work and a 10K resistor
Mod 3- Same as above except it involves shorting 2 legs of a transistor.

What gives? Anyone have any mods that will work. Any help would be appreciated. By the way...I am in Canada and this is legal here.

Thanks,

Mike G.

Date: 1997-11-12 00:00:00 UTC
From: "Edward, III Dickinson" <eddick@worldnet.att.net>
Message-ID: <64cgp3$od4@bgtnsc03.worldnet.att.net>
Source record: 180548

The following table is contained in an article in October 1997 QST, 'Official Journal of The American Radio Relay League'. The article, "What's New About the FCC's New RF-Exposure Regulations?", by Ed Hare, W1RFI, is on pages 51 and 52.

Table 1
Power Thresholds for Routine Evaluation of Amateur Radio Stations

Band (Wavelength)	Transmitter Power (W)
160m	500
75m	500
80m	500
40m	500
30m	425
20m	225
17m	125
15m	100
12m	75
10m	50
6 - 1.23m	50
70cm	70
33cm	150
23cm	200
13cm and up	250

ESSAY QUESTION

Compare the frequencies aligned with lower power thresholds with those which may be useful to Low Earth Orbit satellites. Include in your discussion the implications of non-structured communications verses a potential preponderance 'organizationally prepared' information. Discuss the ramifications of this with the potential dampening of freedom of communication throughout the world. Additionally, discuss the idea of vertically integrated information processing entities dominating the RF Spectrum. References to other recent restrictions on the airways, may be included.

As you see fit, please post this 'essay question' where it may be viewed by Radio Amateurs and interested others.

'Only the Paranoid Survive'
- Andrew Grove

'The price of freedom is eternal vigilance.'

I don't recall that topic.....your posts were mainly under the
WinRadio heading.
Oh, well...we all get a little off topic now and then.

For those still ruminating over the Icom vs WinRadio
issue.....consider that WR makes available, over the Web, free
software upgrades to buyers of the device. I am currently on version
2.12.
I hope Icom follows that lead.
BTW, I own four Icom radios and am happy with all of them. Despite the
fact that Icom Australia has had my ICR10 for over three weeks and the
dealer says he is unable to find out when I will get it back.

3915. Correction to N3ZVM's RR freq. post...

Newsgroup: rec.radio.scanner
Date: 1997-11-12 00:00:00 UTC
From: nobody@REPLAY.COM
Message-ID: <199711120440.FAA13643@basement.replay.com>
Source record: 180646

Hey Eugene N3ZVM, Please read:

The railroads of North America are assigned a group of 97 frequencies in the VHF band. These frequencies are in the range of 160.110 megahertz to 161.565 megahertz, in 15 kilohertz increments. The frequency assignment within this frequency range is managed by the Association of American Railroads (AAR), which is an industry association composed of the various railroads of the United States and Canada.
With the increasing use of run-through trains and leased motive power, many of America's railroads are equipping locomotives with radio transceivers capable of using all 97 railroad frequencies. For simplicity, the frequencies are assigned channel numbers that are used to select the proper frequency on any AAR 97-channel radio. Since the various railroad operating timetables often refer to the AAR channel numbers, they are included in this list.
For historical reasons, a few railroads use frequencies outside the normal 97-channel range. These are listed without AAR channel numbers.
Outside the VHF band, the railroads of North America use the frequency 457.9375 megahertz for transmissions from a train's end-of-train (EOT) device to the train's lead locomotive. Most U. S. end-of-train devices transmit only. However, in Canada, the frequency 452.9375 megahertz is used to transmit from a train's lead locomotive to the end-of-train device. Use of two-way end-of-train devices is gaining popularity in the United States. Before the universal adoption of these EOT frequencies by the AAR, Norfolk Southern adopted its own EOT devices, which transmit on the frequency 161.115 megahertz.

If you are hearing what you think are railroad comms on the VHF-FM marine band it is being done strictly without sanction or approval from the RR.

Better listen more carefully....

>I inherited an old Bearcat 210XL scanner but not the instructions book. How
>do
> I use the SEARCH function?

With that out of the way, you enter the first freq, press limit, enter the 2nd (extreme) freq, press limit. press search. The unit will now search everything between the 2 given freq's. you can press hold to pause the search and use the limit/hold buttons to manually go up and down.

At least thats how it is on the 200XLT

Look also for Radio Shack Wireless CD adapter #12-2051 40$ (page 92
in 1998 catalog). You connect it to the scanner earphone jack and
it transmits the audio on FM. Much more invisible and allows easy
switch between Radio/Tape/CD and the scanner.

Disclaimer: I don't have any experience with this device, all I know
is what the catalog says.

Phillip,
I have reviews covering all three of these radios on my
web site. Try looking around http://www.qsl.net/n2mca/RADIO.HTM
The PRO-64 has 400 channels, lots of useful features and
OK as far as sensitivity goes.
The HS200 has great sensitivity, CTCSS/DCS, great audio,
S-meter and backlit display/keypad. Very good receiver
for being double conversion.
The BC235 has TrunkTracking, good sensitivity and great
interference rejection. Not so great audio and use of
proprietary ni-cad battery pack.
Good luck & happy reading!

Strong signals,

I think filters came in with version 1.0.
I am using 1.5 and it definitely has filter instructions in the help
file.
If you are using a registered copy of 0.99, you should be able to
upgrade via the web.

Yes, and as I remember the AR900 was the reason that Grove boycotted the
whole AOR line for several years.

3926. ANTI SCANNING THREAT STILL ALIVE!

Newsgroup: rec.radio.scanner
Date: 1997-11-12 00:00:00 UTC
From: bobwb3dye@aol.com
Message-ID: <19971112152301.KAA16420@ladder02.news.aol.com>
Source record: 180657

To anyone who scans are operates a ham radio which can scan:

Please read the attached letter I sent to my congressman. Although the amendments to the bill are a good sign---THEY ARE NOT ENOUGH!. If we get lulled into believing our rights are protected, we are wrong.

Eventually all public safety and ham radio systems will use digital technology to modulate their signals. If we allow the "modifyed" version of HR2369 to go thru our scanners will become useless--

Please write your Congressman today--Feel free to use the attached letter.

Bob Reynolds
WB3DYE

Dear Congressman Kanjorski:

I am one of millions of Americans that use scanners for lawful and useful purposes. I am writing about H.R. 2369, introduced by Rep. Billy Tauzin (R-LA). As originally introduced, the legislation would have effectively banned scanners. I understand that the legislation has been substantially reworded as requested by the Telecommunications Subcommittee and now addresses many of the concerns of scanner users. I am still concerned that the bill as amended would prohibit scanners which can demodulate "digital" signals. Congressman as you know we are moving into the digital age. I ask that you amend the legislation to wipe out the prohibition against demodulating digital signals. This would in effect make my scanner useless in about 10 years. If a police agency for example wants to scramble it's signal, it
still can do that. I agree with that provision, but to ban the scanning of digital signals is still a very dangerous thing. I fear the federal goverment already has too much power. This legislation, if not changed will in effect tell the American people for the first time, what they can and can not listen to! That's very dangerous in a free society!

Please use you good offices to protect the legimitate use of scanners by an estimated four million law abiding American citizens.

Sincerely,

Robert Reynolds

I recently downloaded Free Agent. With its limited capabilities, you can ignore a thread, which is helpful, but cannot killfile a specific individual. For now, I can live with killing threads as they come up, as those I wish to killfile usually stick to specific threads anyway. If I find the need, I'll spend the $29.

..... FOR SALE....:

(add postage. Pre-pay. CON-US only!!)

SEIKO CHRONOGRAPH .... beautiful analog watch, chrome
with gold trim around face and down center of band. Has 3
inner dials. Worn twice, but heavier than I like. $ 135.

VORTEX IONIZER.... small, pocket-sized negative ion
generator. Runs on internal 9-volt battery, or on included
wall adaptor. $ 15

RECOTON AMPLIFIED TV ANTENNA..... with AC wall
adaptor. Improves weak signal reception. $ 15

WIRELESS HEADPHONE SYSTEM .... Datawave WH-200
Connect base unit to TV, stereo, or any source of audio.
Transmits (mono) to small receiver on your belt or in pocket.
Range 100-150ft. Uses two AA batteries in receiver. Can use
any headset with 1/8" stereo plug, like Walkman. $ 30

ULTRASONIC PEST REPELLER .... Generates sweeping
ultrasonic tone from 30kHz to 65kHz, to repell rodents and
other pests. $ 10.

---------- P O W E R S U P P L Y M O D U L E S ------
I have several power supply modules available. These are
complete, requiring only the DC input voltage. The modules
contain the necessary IC regulator and caps or coils as
needed. These are new, never used. The boards have the
input and output terminals marked.

1.) 2" x 2" PCB with regulator, transformer, etc, installed.
8V to 16VDC input, +12V / 1A out.
6 units available at $ 4 each, plus shipping.

2.) 24pin DIP regulator-on-a-chip. No external components
are needed! Up to 40VDC input, +5V/1A out.
3 available at $ 4 each, plus shipping.

(or all 9 units for $30 plus shipping)

.

---------- F L A S H L I G H T S ----------

4-D cell (2x2 style), krypton bulb. In box, never used.
$5 + shipping.

6-D cell multifunction lantern. Sleek tubular style with
bright incandescent light at end, 6W fluorescent bulb
along bottom, and flashing red and yellow on top. Also
has electronic sonic alarm that can be switched on with
the flashing lights. In box, never used. $12 + shipping

3-C cell Eveready worklight-style. Bright yellow with
hook for hanging, frosted bulb to diffuse light over area.
Unused, but no box. $5 + shipping

Batteries NOT included.....

COCA-COLA caps. Red cloth, white lettering. New.
$ 5 each + shipping. Only 9 available.

.............MODEMS.............
.
2400 baud internal modem card. Only 3 left. $ 5 each.
.
2400 baud PCMCIA fax/modem card (9600 fax). Only $15
(only 1 available)

14.4Kbaud internal fax/modem card. Only $25

IDE laptop drive: 4" x 2.75" x .75" with mini IDE connector
Seagate ST9546A 540meg $129

MAINBOARDS WITH CPU : Tested with Dos and Windows
(these boards use 30pin memory simms)
386sx 16Mhz $10
486sx 25mHz $35
386DX 40mHz..... $30□

MEMORY SIMMS: (specify parity or not)
4 meg 72pin non-parity .... $ 25
4 meg 72pin parity .... $ 25
30-pin memory SIMMS: 256K 60 or 70ns ($4)
80ns ($3)
100ns ($2)

.............CPU CHIPS.............
AMD 386DX40mHz. A great way to speed up those older boards!
Only $ 5
.

add postage to listed price. CON-US ONLY!

>Its pretty simple logic to see why CW was banned.

I don't know if the MARS director is a Tech or not, but I do know that he didn't order the ban. That policy was set by the Assistant Secretary of Defense. The reason was to establish a uniform military wide communications policy, IE DOD no longer uses Morse.

Has anyone had experience with Selective Calling tones (CCITT type tone sets). I am after software to decode tones straight into a sound card on a PC, from a scanner.
If you can help, your information would be appreciated.

Colin

I have to agree. Bellows doesn't seem to own a scanner that's triple
conversion. I pick up cell on a TrunkTracker (triple conversion) but
from what I can tell it's only because I'm very close to a cell tower.
Take the scanner a mile down the road and no more cell
reception....anywhere in the 800-900 Mhz area at all. So don't believe
the jibberish that ALL scanners can pick up cell images.

Try uniden for the manual or maybe someone can copy their manual and send it to you.Replacement battery packs or the inserts can be purchased from The Nicad Lady(http://ggfx.com/nicad/index.htm)Plus scanner dealers usually carry them at a higher price.Someone had posted trying your local hobby shop that has them for R/C models and may be able to make the insert for you.
Good luck
Robert

Yeah, but you gotta' pass both the written and the on-the-road driving
test separately.

And besides, we gotta' realize that if you only need to get 1-minute of
solid copy out of 5 minutes sent in the Code test, you only need a 20%
score to pass. :-) :-) :-)

Go to your public library. Check out a copy of the American Radio Relay League (ARRL) Handbook for radio amateurs. Browse through this and you should find some ideas/help. Other ARRL publications may help too, such as the VHF manual, if they have one.

Introducing: The Dawley Homepage Weather Website!

Lots of improvements just this week to my Weather Page at:

http://www.geocities.com/ResearchTriangle/Lab/4419/

Designed to provide rapid access to weather information and maps,
featuring an easy-to-use Push-Button format!

Give The Dawley Homepage a try!

Michael L. Dawley

From: Ray Berry <rjberry@tri.net>
Message-ID: <346B5D97.214B@tri.net>
Source record: 180567

PHIL:

Look here:
http://support.tandy.com/support_electronics/doc30/30404.htm

I ordered one for my Pro-39 that had quit taking entries
toatl cost delivered was under $8
Works as good as new now

The part # is 10789824 call RS parts at 1-800-241-8742

Took 10 or 15 minutes at most to change

My scanner had some previous internal work done on it so I'm not sure if
there was some unsoldering of parts they did or not but don't think so
...just removed several small screws..until I got down to where you
could access the keyboard had to lift it a little and pull the old out
and slip the new one in..

Hope this helps
Regards
RB

Actually, I prefer congresscritter, congresscrook,
congressbeing, or congress-slime.

Sad, isn't it, that the only word which seems wholly
inappropriate is "representative."

I heard that hand-launched satellite from MIR, Sputnik-40, while mobile bleeping away on 145.820 MHz, for those of you scannists who are interested.

You'll need a tracking program and MIR 2-line elements to plug into it in order to find out when the satellite will be over your location.

Pretty cool.

>>End of story...NO SALE!
>>Sad.

Odd.... most of the RS stores I have been in make sure they have
batteries in their display models. They let you play with it and check
out all the features. The store I usually go to, if I ask for a manual
to the product, they will got get it for me. Sometimes, I see the item
does not fit my application, but other times that has helped make a
sale. Sounds like you made it to the wrong store.

Source record: 180574

You can now purchase Los Angeles City Fire Department logo items -and-
support the LAFD Widows, Orphans and Disabled Firemen's Fund.

Uniform T-Shirts start at just $6.00* and are ready for shipment

Order now and we'll pay for the call!**

LAFD collector's edition Patches, a miniature metal replica of our Badge,
as well as wide variety of T-Shirts and other Fire Service memorabilia are
all available for public purchase through the Los Angeles Firemen's Relief
Association Store. All store proceeds (yes, each and every dime) is donated
to the Widows, Orphans and Disabled Firemen's Fund of this non-profit
benevolent organization.

You may contact the store directly:

Dalmatian's Firehouse
2900 West Temple Street, Suite B
Los Angeles, CA 90026 USA

**To place an order, please have a MasterCard or Visa ready and call the
Toll-Free Order Line at:

(800) 244-3439 xt 278

**Toll-Free Ordering is available in the US only. All other inquiries and
foreign callers should dial:

Telephone: (213) 380-2900 xt 278
Fax: (213) 380-1028

Store and Telephone Sales Hours are: M-Thur from 0700 - 1600 Pacific Time
Fri from 0700 -
1430

They are closed Weekends and Holidays.

*All funds listed are US Dollars. Does not include shipping. A wide variety
of items are available and prices (naturally) vary.

The Firemen's Relief Association is an established and credentialed
non-profit organization that has supported the men and women of the LAFD
and their families for nearly a century. If you would like more information
about the Relief Association, visit their website (under development) at:

http://www.lafra.org

...IMPORTANT: Due to a contractor error, the phone numbers listed on the
website for Dalmatian's Firehouse are incorrect. Please use the numbers

provided above. The store does -not- take Email orders at this time.

I am posting this information in response to the many who have asked about LAFD apparel. I receive no compensation for my efforts.

+++++++PUBLIC REPLIES ONLY PLEASE*******

Have a Safe and Happy Holiday Season!

Brian Humphrey
Member
Los Angles Firemen's Relief Association

If you have questions, please call the numbers above or visit the LAFRA website at:

> are not here. This fear is groundless.

You left out a few crucial points. For one, since all the 'outlaws'
are likeminded, and talk only to each other, there is no incentive to
move into a ham band unless there is an movement enmass, after all no
sane amateur is going to talk to an illegal so they would be without
anyone to QSO if one came alone. And if the enmass movement takes place,
that would be a very major and serious action sure to bring down the
wrath of the entire amateur community, possibly even building fire under
the FCC's rarely used enforcement mechanism. Easy licensing will bring
that enmass movement.
The times a ham in this area has heard two of them talking inside the
10 meter band and called them down on it, they have vacated posthaste.
'Giving' them a license to occupy HF bands would very much authenticate
their past actions and give them tacit approval to carry it on into the
HF ham bands. It's just as true today as ever--privileges not earned
hold little value and generate little motivation to protect them by
obeying rules.

If easy HF licenses become available, many outlaws will simply become
licensed, as many became no-code techs and occupied the Los Angeles
repeaters, and they would surely cause the same kind of mass havoc
throughout the HF bands. -you recall the post here by Jim Kelley a
couple weeks ago where he recounted a ham-former-cber who told about
hearing cb'ers planning just such a move-"get a no-code license and go
on the repeaters and 'tear things up'". You'd like to believe the fear
is groundless but your explanation is much more so.

> Like an ordinary fence, license requirements only keep out the honest.
> Those with no respect for law easily climb over. But they haven't done so,
> and that can only be because we have nothing that they really want. This
> seems hard for some amateurs to accept. But the truth is staring them
> in the face. Most of the outlaw CBers consider amateur radio *boring*.

Not just hard to accept, impossible. It's ignorance of history. When licensed, they are legitimized, and 'own' a right to operate where they dared not before, and do what it is that so many of them do so well. To suggest we dare allow this to take place is a sure prescription for further serious deterioration of ham radio. License requirements keep out more that the honest-they keep out those who have something to fear and those who have no one to talk to since they have no call sign to use since computer databases today instantly identify fakers.
Open up licensing to all the rest of those people who are not interested enough to learn and earn a license and you have turned a few more shovelfuls from the grave of ham radio. The new licensees will do the rest.

I'm not sure what the point of this posting was...

If the writer was trying to say that there is no code access to HF in
New Zealand, then this is not true. In New Zealand, full access to
frequencies below 30MHz is restricted to those with a valid 12 wpm
pass, or restricted novice segment access with 6wpm. Pretty much the
same as everywhere else. Pretty much as in Canada in fact, or broadly
so. I'll leave other countries to correct their own howlers.

As long as the "sheeple" let them get away with what they do, they will continue to push as far as they can. Until we wake up and correct the situation, the status quo will remain.

I went into a Radio Shack the other day, the sales guy jumped on me about three feet into the store, asked me what I wanted (an AC adapter for my scanner), showed me where to find it, discussed competently the differences among a few models, efficiently wrote up the sale, didn't bat an eyelash when I told him that I wouldn't be giving him my name, and expeditiously took my money. Time in and out: two minutes.

If you can get 24 characyers in a row, but can't guess the 25th (having
seen the context of the previous 24 and copied the following 24), then
something is very wrong! :-)

Not exactly! While one minute of solid copy is 20%, it is not 20% to pass.
You miss one character after 24 of perfect copy, and do this again and
again, and you can still get 96% and fail!

3974. Re: Cellular Capable scanner

Newsgroup: rec.radio.scanner
Date: 1997-11-13 00:00:00 UTC
From: jlarrim851@aol.com
Message-ID: <19971113135601.IAA29517@ladder02.news.aol.com>
Source record: 180584

I own a RS 2039 and a HH RS 29. The 2039 gets cells in the 851 - 856 range as clear as if they were in the room with me but I also live within a mile of a tower. The 29 does not pick them up at all. This seems odd to me because the 29 is a lesser scanner but several times I have tuned them to the same freq. and only the 2039 picks them up. (Of course I do not listen to these calls.) Last I would agree with the person that said it interferes because several of the police freqs. are at times overridden by the calls.

Just my 2 cents, Joe

3978. Great Case for Icom PCR-1000

Newsgroup: rec.radio.scanner
Date: 1997-11-13 00:00:00 UTC
From: Philip Scott <pwscott@erols.com>
Message-ID: <346B231A.5B3754A1@erols.com>
Source record: 180588

I've been using the Icom PCR-1000 for some time and found that it was not all that well protected in the bag with my laptop. I found that the carry case I bought for the Iomega Zip Drive is perfect for it! Mine's from Case Logic, bought at CompUSA (about $25 if I recall???), but there are others who make them. The PCR-1000 fits well in the main compartment (if you move the velcro'd separator a bit), the power brick fits in one of the two zippered side pockets and an RS-232 cable and whip antenna go in the other zippered pocket. Has worked out very nicely for me...theres a nylon handle on the top of this nylon bag.

Enjoy, and let's hope we see some flexible software for this thing. The Icom-provided sw is cool to look at but a pain for those who have used real scanning sw like Scan*Star and ScanCat Gold before.

>
>Any problems with this setup??

For receiving, not really, not unless you're intent on squeezing every
last dB of performance out of your receiver. Some folks will cite the
impedance mismatch. Yes, it is there. In the end, however, unless
you're doing something critical such as weather satellite reception or
something where every last bit of loss matters, you aren't likely to
notice much difference. Since you're talking about an unmatched single
wire antenna here, I doubt that is part of the equation.

One problem with this setup is that even though the other receiver is
off, it often has switching diodes in the first stage. These diodes
can go in and out of conduction in the presence of strong signals.
The result could be some Inter-Modulation Distortion (IMD) that you
otherwise would not hear. How will you know if this is a factor?

Well, if you have a voltmeter, a switching diode (1N4148 or similar),
and a ceramic disk capacitor (value is not critical) and you place the
diode and capacitor across the antenna terminals (with the other
receiver attached) and measure 0.7 volts or more, there is a chance

this problem will plague you.

>Question 2: Does the answer above differ if I'm talking about HF vs. VHF
>signals?

Not substantially.

>Question 3: Is there any advantage over the "T" connector to using
>something like an Alpha Delta 2-way antenna switch (with the antenna
>connected to the 'single' input and the two receivers connected to the
>switchable SO239s? Because the unused receiver is "connected to ground"
>when switched off with the Alpha Delta switch, does this cause any
>problem? Again, this unused receiver itself is OFF.

This is more desirable in that sometimes if both receivers are on, one
of them can radiate LO products in to the other. The switch would
prevent these products from entering the other receiver and
potentially causing an extra birdie or two. It would also take care
of the IMD problem.

A side note: if this switch can ground both receiver inputs, then you
have additional protection in case of a nearby lightning strike. Of
course, it's unlikely this switch will protect you from a direct
lightning strike, but it may save the first stage or two from
destruction if the strike was very close.

Again Dick, I think your arguing both sides of the fence.

We all know that FCC enforcement is a joke: they frankly don't care
what happens within our bands, they only get uppity when interference occurs
to users outside our bands. I think nearly all licensed hams would benefit
from more rigorous enforcement of the regulations. If it takes a drastic
increase in HF licensing, I think that's fine.

Unlike most people, I don't think freebanders are stupid. They know that if
they piss off too many people, their fun will be over. So, they walk that
fine line for the most part, and life goes on.

> The times a ham in this area has heard two of them talking inside the
>10 meter band and called them down on it, they have vacated posthaste.

Gee. That doesn't sound too bad. They really are an unruly bunch, aren't
they?

>'Giving' them a license to occupy HF bands would very much authenticate
>their past actions and give them tacit approval to carry it on into the
>HF ham bands. It's just as true today as ever--privileges not earned

I don't think anyone has been proposing "giving" free HF licenses to anyone.
That is the strawman "Agenda" that you keep ranting about, but nobody working
to eliminate code testing has proposed that. You are invited to cite
counterexamples.

> If easy HF licenses become available, many outlaws will simply become

>on the repeaters and 'tear things up'". You'd like to believe the fear
>is groundless but your explanation is much more so.

There are no doubt social malcontents in any activity. The fact is, if
most of the people were as godless as everyone portrays them, they wouldn't
let the lack of a license keep them from "tearing things up" now.

I have visited the Los Angeles area from time to time. The repeaters there
seem to have their bad spots, but by and large, I hear what I hear on repeaters
here in the San Francisco area: lots and lots of nothing. Massively
underutilized repeaters.

As for your "evidence", it is at best hearsay.

>Not just hard to accept, impossible. It's ignorance of history. When
>licensed, they are legitimized, and 'own' a right to operate where they

Ah, much like your own license "legitimizes" your use of the bands?

>To
>suggest we dare allow this to take place is a sure prescription for
>further serious deterioration of ham radio.

Your attitude reminds me of a guy with a sailboat in drydock. He refuses
to paint it, but he can't take it out without doing so. So, it sits there
month after month, as the boat gets dustier and dustier....

>License requirements keep
>out more that the honest-they keep out those who have something to fear
>and those who have no one to talk to since they have no call sign to use
>since computer databases today instantly identify fakers.

First of all, the "computer databases" can be utilized by freebanders as well.
How many of you would really know if someone adopted the callsign of someone
you had never met? "Oh yeah, I am Bob!". The database says that call
was issued to Bob. Cool, he must be a real ham!

As for the "fear" element, I am reminded of the movie "Amazon Women on the
Moon". During a short sketch, a bunch of eyepatched video pirates plunder
a cache of movies. A pirate claims "Make all the illegal copies ya want
me hearties!". When the FBI warning against copying tapes plays, the head
pirate says in a farcical voice... "OOOoooh, I am sooooo scared!".

The FCC has little money and probably less interest in maintaining regulations
within our bands. Let's face it, if we can't keep the peace in our bands,
we aren't going to have peace.

> Open up licensing to all the rest of those people who are not
>interested enough to learn and earn a license and you have turned a few
>more shovelfuls from the grave of ham radio. The new licensees will do

>the rest.

Actually, the shovels that will bury amateur radio are real shovels. As more and more of our Keys go Silent, amateur radio slips into the realm of historical curiosity, rather than an interesting line of individual achievement.

>in her car and drove another 15 miles to pick one up at another store
[snip]

That happens. The thing to remember with RS is that the stores are independently run. I had a friend who was a RS store manager, and she explained the system. They're (mostly) not franchises or independently owned, but each manager runs his/her store almost like they owned it. Some hire minimum wage droids; usually as few as possible. Some hire good people and train them. When you find a good RS, keep going back to that one.

It's like getting your car fixed at a gas station. If you're getting good work at one Shell or Exxon or whatever station, that tells you about the manager/owner of that place, and not what the next Shell/Exxon/whatever station down the road will do.

300 mAH is a very low capacity battery. If you say it's lasting for "a few
hours" of continuous use it sounds more than I recall getting on my R1
years ago. If you want more then buy an external battery pack or the case
ou can put alkaline AA cells into.

Proprietary and internal batteries are but one strike against radios like
this.

That really depends on what the 25th character is a part of.
If it is a callsign, then there's no easy answer. Likewise,
if it was a part of a numeric sequence, the actual digit
may not be obvious at all.

Yes, Dick. You've dragged my quote out before. The fact is, that basically nobody wants to talk to a lid. These guys give up in short order, and the band returns to normal. There are no more bad guys on VHF than there are on HF, although they can be more disruptive on FM than on SSB or CW. The "easy" license you talk about already exists according to some, and the reported death of the VHF+ bands and ham radio was definitely premature.

When the lights go down on the city, and the control ops have all gone to bed, the 435 repeater is alive, with real QSO's and callsigns, and some semblence of order - albeit less so than the others. And the ops there still run some CB. [kind of an eclectic mix of Journey, and Home on the Range :-)]

I wouldn't use that repeater, but I'll listen to it from time to time - and it can be entertaining. These guys are not dummies. I think it may even have been you who said that you were mildly entertained by 14.313 on occassion. It's all radio, man. The "handles" have been changed to protect the innocent. The attitudes seem to change a bit with time as well. Ham radio is a new ball game for these guys - the rules, and objectives are different, and they soon come to know it. The foul habits change like the weather, or with the full moon. But even in LA, ham radio goes on - basically as usual. Thank god it's no problem to QSY to a clear frequency - and that if they follow you to HF, they can't do as much damage to you.

Some of the good things about ham radio are, that the chances of a knucklehead running 100 times your power are much less, we've got more than 40 channels of room to use, we lack the anonymity of CB, and obviously we have to pass tests to operate on our bands. These things make a really big difference, which you have a tendency to underestimate.

You aren't going to change a foul attitude with a ham test Dick. In fact, I'd say there is some evidence around here that you might just create one.

>licensed, they are legitimized, and 'own' a right to operate where they
>dared not before, and do what it is that so many of them do so well.

I know what you mean, it's like they own the frequency or something. I always wondered about the welded VFO crowd. Now you tell us they're all CBers. So THAT'S the explanation!! Very interesting. "Please QSY! No, YOU QSY! I've had the frequency since 1978. No, YOU!" So, Dick. What was it you were saying about the code test?

>To
>suggest we dare allow this to take place is a sure prescription for
>further serious deterioration of ham radio.

Perhaps now you're talking about the lack of enforcement. I couldn't agree more!

>License requirements keep
>out more that the honest-they keep out those who have something to fear
>and those who have no one to talk to since they have no call sign to use
>since computer databases today instantly identify fakers.

But you would go ahead and talk to a lid simply because he had a callsign? I'm not quite following you here. Fear works in either case Dick - with or without a callsign. Of course with a license, you have more to lose I suppose.

>Open up licensing to all the rest of those people who are not
>interested enough to learn and earn a license and you have turned a few
>more shovelfuls from the grave of ham radio. The new licensees will do
>the rest.

Were we talking about abandoning licenses and testing, you would have a excellent point. Since we are not, you don't.

> . Easy licensing will bring
> that enmass movement.

You still miss the point. Instead of ,"easy licensing" use the term
,"relevant testing".

> If easy HF licenses become available, many outlaws will simply become

If relevant testing were used many technically inclined people would start
drifting back to ham radio, ending its condition of being an historical
society.

> couple weeks ago where he recounted a ham-former-cber who told about
> hearing cb'ers planning just such a move-"get a no-code license and go
> on the repeaters and 'tear things up'". You'd like to believe the fear

can't do without the obligatory no-code bashing, can you

> Open up licensing to all the rest of those people who are not
> interested enough to learn

Point 1

A ham radio license is open to nearly everyone.

Point 2

The litmus test of a willingness to learn certainly should not be, a desire
to memorize a certain obscure code.

3991. Gingrich Cellular Intercept - Update: McDermott asks judge to silence witnesses

Newsgroup: rec.radio.scanner

Hi All,

The following article appeared in today's Seattle Times.

Bob

McDermott asks judge to silence witnesses

by James V. Grimaldi
Seattle Times Washington bureau

WASHINGTON - To fight criminal allegations in the Newt Gingrich tape scandal, Rep. Jim McDermott of Seattle has asked a U.S. District Court judge to stop witnesses from testifying before a federal grand jury, according to federal and congressional sources.

Citing an obscure clause in the U.S. Constitution, McDermott wants a federal judge to quash the subpoenas of two of his congressional aides and of James Cole, the outside special counsel hired to investigate House Speaker Gingrich's ethics violations.

A federal grand jury has subpoenaed the staff members and Cole regarding allegations that McDermott leaked the tape to three newspapers - an act the FBI and Justice Department are pursuing as a criminal violation of the Electronic Communications Privacy Act.

A transcript of the Dec. 21 recording of Gingrich and other Republicans appeared in newspapers in January.

Democrats said the tape showed Gingrich had violated terms of his plea-bargain agreement with the ethics panel, which had resulted in the speaker paying a $300,000 penalty. To avoid a full-blown ethics hearing and potentially harsher penalty, Gingrich admitted wrongdoing and promised not to conduct a media campaign to downplay his admission. Democrats say the tape showed him directing his GOP lieutenants on how to respond publicly to his admission.

In the end, special counsel Cole determined that Gingrich had in fact violated that agreement. But nothing came of it. Cole and the committee took no action and determined it was in "the best interest of the House" to stick with the original settlement.

But Republicans cried foul and said the tape itself was a criminal invasion of privacy.

John and Alice Martin of Florida admitted recording the conversation while listening to the call on a police scanner, which had zeroed in on Rep. John Boehner's cellular portion of the call. The Ohio Republican was vacationing in Florida at the time.

In April, the Martins pleaded guilty to an infraction, paid a $1,000 fine and agreed to cooperate with federal authorities if prosecutors would not charge them with other crimes. They said they gave the tape to McDermott in January while he was ranking Democrat on the Ethics Committee investigating Gingrich.

Case has been delayed

Since the conviction of the Martins, the case has run into delays, according to a letter from Assistant Attorney General Andrew Fois to Boehner.

"Although our investigation has made progress, we cannot predict when it will be complete," Fois said. "Even investigations that appear to be straightforward from the outside may involve complex issues that take time to resolve."

Because of the delays, Boehner is preparing to file a civil lawsuit against McDermott. Boehner, chairman of the House Republican Conference, on Friday formally asked ethics authorities for permission to use campaign funds in the litigation.

The criminal case has become at least temporarily delayed as McDermott fights the subpoenas of Cole and of Charles Williams, McDermott's chief of staff, and Wilda Chisolm, his executive assistant.

Known as the "speech and debate clause," Article I, Section 6 of the Constitution states that "for any speech or debate in either House, they shall not be questioned in any other place."

The speech and debate clause has been interpreted to limit civil or criminal court cases on congressional actions. Over the years, courts have extended the speech-and-debate privilege not only to members of Congress, but also to their staffs.

The clause has been used both by those claiming heroic causes and those who eventually fell in ignominy. Speech-and-debate slowed an investigation into a committee that entered the Pentagon Papers into a hearing report, and also delayed a probe into wrongdoing by former House Ways and Means Chairman Dan Rostenkowski, D-Ill.

The provision also applies in criminal proceedings. In cases where members of Congress have been bribed for votes, prosecutors have been forced to press charges without mentioning the vote to juries. That's because an official legislative activity, such as a vote, cannot be subject to prosecution, according to Supreme Court rulings.

In the McDermott case, the question could hinge on whether his conversations with his staff and Cole are considered relevant to their congressional and legislative duties.

Congressional sources say he was heard discussing the tape with Cole. Cole, whose contract with the House has ended, declined to comment, other than to say: "The cloak of privilege extends to the staff member as well as the member of Congress."

Over the summer, McDermott asked the House general counsel to intercede on his behalf and invoke the speech-and-debate protection for Cole and the staff members. The general counsel is an office controlled by the House leadership, which voted on party lines to reject McDermott's request.

At a hearing Friday in U.S. District Court, the general counsel asked if the House could address the court on the matter. The judge has not ruled on the request.

McDermott declined to comment on his case, but he was eager to discuss the importance of the speech-and-debate clause as a key aspect of the separation of powers between the executive and legislative branches of government.

"Irrespective of my case, it is a fundamental principle of our democracy," McDermott said. "Democracy fails without the open and free speech in the Congress or Parliament. Otherwise, the executive branch could come over and clobber the Congress for something they said."

McDermott said the provision permits members of Congress to engage in a full and detailed discussion of issues. "Secrecy is never good," he said.

Top attorney hired

McDermott has hired Barry Levine, a top criminal defense attorney in Washington. Levine, a former assistant U.S. attorney, is author of, among other articles, "Responding to Subpoenas," which appears in the "Lawyer's Desk Book on White-Collar Crime."

"Mr. McDermott has always, at all times, comported himself with the highest level of rectitude, always unfailingly acted in the public interest and has been, in the House of Representatives, a beacon of morality," Levine said. "The allegations here involve important, indeed lofty principles, and nothing short of constitutional principles."

Levine also attacked Boehner for threatening to file a lawsuit.

"Mr. Boehner apparently believes that the courts are appropriate places for political disputes," Levine said. "There are those who may practice politics in a gutter. Those who do that will have to do it without Mr. McDermott."

But Boehner's attorney, Mike Carvin, said the argument that leaking the tape served a greater purpose is an "ends justifies the means defense" for actions that violated his client's privacy.

"It is wrong for a sitting congressman to commit crimes with impunity and commit unethical acts with impunity," Carvin said.

This is an update to my earlier posting regarding the airlines' policy on
scanners in the cabin. I recently flew to Chicago on America West Airlines,
and before leaving I called the airline and asked about bringing my
scanner. They said, yes I could bring it on the plane, but could not turn
it on during flight. They did not give any technical reason, other than it
may interfere with navigational instruments. Just to see, while waiting at
the gate, I turned on my BC230xlt, and was surprised at how little of the
radio traffic was getting through. Apparently the Airbus we were on was so
well shielded that it blocked most of the signal. Since reception was so
poor inside, I turned it off until we got off the plane. It was nice to
have the scanner handy for my 2 hour lay-over in Ohio....

Thought you'd like to know.

Off topic, but I am a consultant for a small computer company, and have to interject:

Check your classifieds. I have seen people selling 386's for $500+ so anything is possible. One mans' trash.....

As far as those $1000 Pentium 200's, I'd avoid those like the plague. They are usually the non MMX chipset, they are usually 166's that have been jumpered on the motherboard to run at 200MHZ, and are C grade processors (in other words, one step away from the reject bin) Spend $1000 on one now, and you'll be spending another $1000 in repairs and upgrades. It's also possible that these pentiums are gray-market (read stolen) processors. If that is the case, be ready to hand over your PC to the feds when (not if, when) these jokers get caught. If that happens and you want your machine back, you can get it back - for the additional price of a genuine pentium processor at full manufacturer-suggested retail. Don't believe me? Ask Intel yourself! One of our PC service customers got stuck with one of these hot chips, and that's what he went through. The guy that sold him the machine is doing the next 5 years minimum at club Fed, lost his business license and his company, and is paying $250,000 in fines.

FYI: A good pentium 200 system should start at $2500 (including 17" monitor) and go up from there. Anything sold cheaper isn't worth the cost of blowing up.

Have a modified PRO-43 in as new condition except for a scratch on the top plate. The rest of the case is brand new from Radio Shack. Bought the scanner about 6 months ago. The paint on the case was starting to flake which is why I had it replaced. I also had it checked and aligned while it was in the shop. Except for that one scratch, it is in as new condition. $240 shipped con-USA.

Well I don't know where you get those prices but you can have a good
regular 200mhz pentium as the other guy said for arnd $900-$1000. This
is with top quality components.... I also work in the computer biz. and
I believe I know what the prices are.... as far as mmx they aren't near
a the $2000 mark...you can buy a name brand Pentium 2 233mhz for that.
Might want to update your price list.
Just my 2 cents...
Sorry about being off topic of the main post.

Bonjour, mon ami.

To do this you will need a sound card that can do A-D and D-A at the
same time. You'll also need a programme to do it but I don't believe
such a thing exists. I'm not sure what the Surete du Quebec are using.
It may be a very high level of encryption.

Why should it? And, if it did, what's the problem?
Consider...
Outlaws are mostly outbanders. Why? because they can't use the sanctioned CB channels because they are too crowded. They can't use the HF Ham bands because they are too well enforced. So they outband, which is the sole reason they are outbanders. Most will not move to a sanctioned band, simply because they like the "outlaw" image.
However, what's the fear of them using the HF bands? They aren't full (I listen, and I'm telling you they aren't full. I know.) So what's the problem with them using (legally) the Ham HF bands? "They talk." So do you. "They try long distance contacts." Like you don't? Hell, the ARRL runs contests for just that purpose.
Let's face it, the people you want to keep out pose no real problem or threat. In fact, they will help the HAM hobby, as the HAM bands are so little used that the FCC is being asked to take them away and allot them for commercial use. You HAMs need all the help you can get!
As for morse code, a requirement for its use is fine, if you want to use it. But if not, then why? Saying that it will get out when you are stuck in a basement etc., only works *if you are a HAM*. And they are so few as

to be significantly unimportant. (Sorry if this offends, but facts are facts. Not enough HAMs will be stuck in a basement with the equipment needed to make a spark gap transmitter to make a difference.)
CW is nice, I suppose, if that's your thing. And nobody is saying you can't use it. If you want to, bang away. Fine.
But saying that CW requirements will keep out the riff-raff is bullsh*t. Listen to yourselves sometime, and you will see what I mean. The HF bands are full of racist crap, other people blithering about their latest cable change, lengthy discussions about whether an antenna rotator should have 1, 2 or 3 degree stops, half-hour weather reports, and other stuff that grown people spend thousands of dollars on hardware to send by radio so they can save a few stamps. Fine. That's what hobbies are for (I'd hate to add up how much I've spent on computers...). But to think that the HAM hobby is somehow holy enough that the unwashed should be kept out is uncalled for. Especially when they are already there.
But that's just my opinion. What do I know?

And I'll bet you actually think that's right, don't you?
Guess what? You're wrong.
The Morse Code requirement is there for one reason only: The US is a signatory to a treaty that requires it for Amateur Radio (non-commercial) transmissions that significantly cross international borders.
That's why the No-code license grants privelidges on the bands it does: they are line-of-sight.
CWE has absolutely nothing to do with promoting the hobby. It acts instead to keep people out. And the only ones who think that's OK are those elitist people who think that somehow the Amateur Radio hobby is so holy that the riff-raff needs to be kept out.
Well, after listening to the crap that flies on HF, I can say this: it ain't that holy.

ANY phone (or device) that TRANSMITS can be picked up on a scanner.
Depends on how you want to limit your chances of the "average Joe"
picking you up on a scanner are.

Hi Mr. Pratt Jr.

Have you ever considered a reading course. Gary's callsign is part of his email address it seems to be a 2X2 call. In the 4 area this generally indicates an Advanced Class ticket. If you got off your dead butt and checked a callsign database you might find that that is the class of license he has. Can't you pro code test weenines come up with something better than the old "want something for nothing" crap?

Yes.

>Better Question: Anyone care to explain WHY this happens?

They are simple images, twice the 1st IF away from
the frequency shown on the display.

I tested a BC895XLT for the upcoming issue (December 1997)
of Monitoring Times. I, too, heard cellular images in
the civil and military aircraft band. Here's the
relevent passage from my review:

"...The BC895XLT uses the same first and third IFs as the BC9000XLT,
but the second IF differs (see Measurements table). Despite the
high first IF, our BC895XLT hears images of cellular phone
signals in both the civil and military air band. Image rejection
in those areas measures 38.5 dB and 43.0 dB, respectively..."

It doesn't need to be offical. It's just one person asking another to join an organization. You would be doing the same thing when you ask a new ham in your area to join your local radio club. Now, if you want an offical invitation to join AMSAT, I'll have one of the board of directors send you a special e-mail or if you would like, I can have Martha send you a AMSAT membership application by mail.

I think the clever play on words is confusing some folk.

"ARRL got you down", meaning that on the surface of the planet, the ARRL tends to care for ham things (at least that is their intent and purpose), and "Join AMSAT" suggests that if one wants to play a part in the organization that deals with things one sees when one looks "up", one needs to join AMSAT (perhaps in addition to the ARRL).

Cute, but probably needed a preface in the original post to help those of us who tend to be more literal (left brainers) catch up with the artistic license of the more literary (right brainers). Neither is better, just different!

I thought it was cute, but then I tend to float fairly readily between right and left brain approaches ... have to, I'm a counselor and pastor!

Bill, have you noticed, you don't hear that "HF crap" you mentioned on CW. One of the reasons CW fans are so fond of that mode is that others who engage in that mode tend to be much higher quality folks than the SSB mic button pushers. On CW, you get real QSOs with real people (some CW DXer/contesters excepted).

Mike, KK5F

Thanks for this info! I did not know that there WAS such an
organization. I will make sure this info gets to everyone in our Ham
club, which by the way, consists of all no-code licenses except for one.
(He took the exam a few weeks before the code was droped for the Tech
license, so had to learn it. He does not, nor ever has used it though,
and doesn't remember the code anymore anyhow.)

Not if the transmitter is spread-spectrum. Your so quick to cut down
all of my posts, so I decided to look at one of yours, and you are
answering questions that you don't even know about.

What scanner do you have that can pick up a cordless phone with
spread-spectrum?

Hello,
I wonder if someone here knows more about the Flex protocol and is willing to divulge it.
Right now I'm building a flex receiver.
I've been through all the motorola pages and found a description of the Flexchip MC 68175.
All the information however, about the sync words, the blockcounter, the interleaving and the error correction has been left out.
So far I've been able to identify the sync words.
Though I think I'm doing the deinterleaving in a correct way, I'm unable to find enough correct codewords when applying the BCH 32, 21. I suppose it is the same one that is in use with the POCSAG.
So there must be either some tampering with the ECC , or there is something silly with the deinterleaving and I'm too stupid to find it.
I'm working with a 3200 bit/sec signal, so there are two concurrent phases, again guessing how they may be interleaved.
Any help appreciated, best would be a complete description of the protocol.
bye
eduard

> if,
> >when) these jokers get caught.

I think whoever wrote this must work for a "small company" that likes to
get ripped off. <G> I paid what you estimated for a Dell 200 MHz MMX w/
17" monitor, etc... IN MARCH!

From the December 1997 Computer Shopper, all systems include (at
least) 32 MB RAM, 2GB HDD, modem, 15" monitor, 12x CDROM, full software
packages, etc... :

Gateway 2000 166 MHz MMX $1349

Dell 200 MHz MMX (w/ 4.3 GB, Zip drive, & LAN card) $1799

Micron 233 MHz Pentium II $1899

I find it hard to believe that THESE GUYS are using STOLEN PARTS. 8^)
Also, since these companies are now considered "major brands" they were
on the HIGH SIDE of many of the established, reputable mail order
suppliers.

I'm also assuming you've never seen the closeout PC's companies like
Surplus Direct sell (names like NEC & Compaq), such as a P133, loaded
for $549. Compare the SLOWEST P133 to a 486/66!

I wanna sell computers to YOUR company!

Barry

A real good thing about CW is that you can have more international qso's -- you know the goodwill thing -- with hams who do not speak English than you can with any other mode...well without having to purchase additional expensive equipment.

All Airbus airliners are well shielded. They are "fly by wire" planes, and
they need as much pretection from lightning effects, etc, as possible.

You did not give him your name! Do you mean you made a cash transaction
without giving him your name! Well there is hope for this country
afterall. Well, actually I am joking a little bit here, but I am also
serious. I have always been bothered by stores that make it hard to make
just a cash purchase. All that should be needed is the cash. No names, no
phone numbers, etc. Also, I hate it when I make out a check, and they
demand a phone number.Fist of all, they do not need the phone number to
cash the check. Second, if thewy are so concerned about the check maybe
being as bad one, do not take the check! Call the police if they think I
am a bad check writer! When I give them my phone number, (I do not like
the policy, but I want the item also), I always tell them to not call
after 11 at night. They always give me a funny look. I just say to myself,
"you wanted my phone number, why do you want it, if you have no intention
of calling me!". End of soap box.

For sale,

Radio Shack Pro 2006 Scanner

Full coverage incl cell. No other mods than this simple one.

In Mint cond with very little use. No scratches or any wear on the keys.

With Manual and Box.

Price is $340 incl shipping to you conusa.

Please e-mail me at b-team@geocities.com if you have any questions.

Thanks, Bill

4036. Interesting Story about Police Radio

Newsgroup: rec.radio.scanner
Date: 1997-11-14 00:00:00 UTC
From: KC5YWX <jboros@highfiber.com>
Message-ID: <346C7F39.5581C5B4@highfiber.com>
Source record: 180452

Last night on the evening news, I caught part of a story about a new radio system they are planning to impliment here in Albuquerque. They showed the $2,500 (each) Ericson tranceivers (I am not sure if they are full digital or trunked) fail at communications inside buildings, even with someone in the parking lot of the same building. Then they (news crew) bought some cheap 49MHz walkie talkies at Radio Shanck and another pair at a toy store, for $18 each. The toys worked just fine. At the end the announcer asked the cop which he'd prefer in an emergency, and he picked the $18 one.
Frankly, I think an intermediate technology like the Yeasu 50R walkie talkies for about $300 each would be good. That was another complaint that the expensive HTs were NOT rugged and malfunctioned if slighty wet. The FT50R does not. I think even teh toys kept working.

4037. Trade Pro-2021 Scanner For Base CB Radio

Newsgroup: rec.radio.scanner
Date: 1997-11-14 00:00:00 UTC
From: radioman@localnet.com
Message-ID: <64hpvkmbb1@usenet88.supernews.com>
Source record: 180453
Cross-posted to: rec.radio.cb,alt.radio.scanner,rec.radio.scanner,rec.radio.swap

I would like to trade a Realistic Pro-2021 base scanner for a base unit Citizens Band radio (Or a nice mobile unit that will be suitable as a base unit). Hera are the particulars on the unit that I am offering:
Covers the following frequencies:
30 - 50 MHZ
108 - 136 MHZ
138 - 174 MHZ
380 - 512 MHZ
The radio is in very good condition. The only negative about it is that the light panel in the frequency display is dim. This has not been a problem for me and I have poor eyesight. It is however noticible and should be noted. It will come with a factory photo-copy of the owners manual to helpthe new owner get aquainted with it.

I would like to mention that there has for a long time now been rumors of a 800 mod for this radio. If you are looking for that, don't. The display will read out the 800's but there is no RF circuitry in these models to support those frequencies. It is a very sensitive radio for all the other stuff and has performed extremely well in daily use for me.

If you have a base CB that you would like to trade for this unit, e-mail me and lets talk a deal. I prefer to deal only within the confines of the United States.

Regards,
Ray Miller N2NJK radioman@localnet.com

OFF-TOPIC Material, in proof:

Why Engineers Don't Write Cookbooks

Chocolate Chip Cookies:

Ingredients:

* 1.) 532.35 cm3 gluten
* 2.) 4.9 cm3 NaHCO3
* 3.) 4.9 cm3 refined halite
* 4.) 236.6 cm3 partially hydrogenated tallow triglyceride
* 5.) 177.45 cm3 crystalline C12H22O11
* 6.) 177.45 cm3 unrefined C12H22O11
* 7.) 4.9 cm3 methyl ether of protocatechuic aldehyde
* 8.) Two calcium carbonate-encapsulated avian albumen-coated
protein
* 9.) 473.2 cm3 theobroma cacao
* 10.) 236.6 cm3 de-encapsulated legume meats (sieve size #10)

To a 2-L jacketed round reactor vessel (reactor #1) with an overall heat transfer coefficient of about 100 Btu/F-ft2-hr, add ingredients one, two and three with constant agitation. In a second 2-L reactor vessel with a radial flow impeller operating at 100 rpm, add ingredients four, five, six, and seven until the mixture is homogenous. To reactor #2, add ingredient eight, followed by three equal volumes of the homogenous mixture in reactor #1.

Additionally, add ingredients nine and ten slowly, with constant agitation. Care must be taken at this point in the reaction to control any temperature rise that may be the result of an exothermic reaction.

Using a screw extrude attached to a #4 nodulizer, place the mixture piece-meal on a 316SS sheet (300 x 600 mm). Heat in a 460K oven for a period of time that is in agreement with Frank & Johnston's first order rate expression (see JACOS, 21, 55), or until golden brown. Once the reaction is complete, place the sheet on a 25C heat-transfer table, allowing the product to come to equilibrium.

Source record: 180460

I know this is a contrarian way to sell an item, but...

I have an AOR AR-2800 mobile/base scanner.

1000 channels, AM/NFM/WFM/SSB
..5-600, 800-1300 MHz

Paid $450 about 4 years ago, very little use since. Great condition.

I had posted an earlier message offering it for $300, but no takers. How much would you pay for it? I figure it has to be worth at least $200. It is pretty much full coverage, except the rather dead 600-800 MHz UHF TV band. Full cellular.

If you'd like to make an offer, remove the "nospam" from the return address or send to:

Radio Shack sells a book called Police Call, it will have all the freqs
you want for KY, IN, IL, and WI. And then some. It runs at about $12
bucks I think.

Source record: 180465

This will be short because everything is available on our web site and to
avoid a long download.

##################################
THE RCI FEDERATION ANNOUNCES
##################################

RCI-ROM 1.1
A CD-ROM for RCI 2950, 2970, 2980, 2990, Saturn, Satutn Turbo and similar
rigs owners.

All the mods well explained with texts, photos and videos
No a simple listing of Howtoos but a real multimedia product with menus,
musics, sounds...

Multimedia part:

Full Diagram: Main Board + CPU board + Microphone Encyclopedia
Full listing of all the components
Full table of voltage values
Full table of frequencies - channels
Full alignment procedures
Repair tricks, errors, enhancements...
Plenty of mods with photos, videos, voice explanation....
Extreme mods "for transverting to other bands" chapter
A full DX Guide with beaming utilities & programs
A Rci Packet chapter: How to practice Packet with your rig
A complete information on the RCI Federation, the full collection of
already published RCI Newsletter...
The RCI BIBLE 3.0 beta (exclusive)
+ Over 1500 mods for other rigs (Ham and CB radios)

Video part

Component section ID
Internal Controls ID
Channel conversion on new 2950, my old one got stolen.
MRF477 intro and removal of 2SC2312's
MRF477 pin reconfiguration.
MRF477's installed and AMC transistor location.
Observing the radios output on a scope and wattmeter.
Introduction of the Heavy swing modification.
Candlewax (just watch it!)
Observing the effects of the swing kit modification on the
Wattmeter and scope.

Disassembly of the radio.

and much, much more.....

The needed computer will be:
486DX2, Pentium, Pentium Pro, or any other compatible
RAM: Minimum 8 Mb - Hard Drive: 20 Mb free on the disk
Video: 800x600 VGA or upper
A CD-ROM reader 4X & a SoundCard
Everything is in English.

Price: $35
- Credit card Visa/Master Card
- Cash
- Mail orders
- Resellers and importers, please contact for other payment protocols.

Date of release: 30 October 1997. AVAILABLE NOW !!!
We directly deliver 96 Hours in any country and we are looking for local resellers or importers. Please advise.

There is a beta version available at our web site: http://rciweb.cadic.com (9 Mb in a EXE autodecompressing file).
This CD-ROM is the product of an international collaboration (France - USA - UK)

RCI Federation (R)
ACQ - Box 2887
41028 Blois Cedex
France

Non profit making registered association
All the profit is re-invested in the interest of the community.

I am just curious
about something: Why would you want to tinker with a brand new radio, and
risk hosing it, voiding the warranty, and ending up with a $200-$400 paperweight??
What mod could you possibly need in a radio that has triple conversion,
300 channels, and trunking capability?

Every day I see
a posting in this NG from some chucklehead who wants to listen to cell
phones on his brand new TrunkTracker. "Mommy, we want cellular {whine}"
WHY? The most you can expect to hear is some knucklehead calling his psychic,
or getting in a fight with his girlfriend! Trust me I know!

C E L L U L A
R I S B O R I N G ! ! ! !

Why listen to
something as boring as real estate agents kissing some clients ass so they
will buy a house? Or construction workers discussing what kind of concrete
they want to use? YAWN!!!

Why listen to
busy signals and ringing and dial tones all day? You might miss something
actually interesting going on on one of the public safety channels!

If you want to
listen to cellular phones, it won't happen on your new Trunk Tracker. Get an old scanner like the pro 34 or the "pre ECPA of '86" pro 2026. Perform the mods shown on the internet and voila! Cellular. Listen for about a week and you'll never want to do it again. (Well, almost never ;-))

-Phil

Very well said, i have a pro-2022 and did the mod, you're right about a week and i was back to public service monitoring :)

> willing to divulge it.

Hmmm... beyond what Motorola circulates, info on FLEX can be kind
of hard to come by. They consider the protocol "propietary," and only
sell the info to companies that license it. And even then, Motorola's
been known to say things like "Oh, you don't need to license our
protocol... just buy our development kit and pre-assembled receivers, and
you'll be fine." =(

> So far I've been able to identify the sync words.

> phases, again guessing how they may be interleaved.

Check that. A tech who works in paging told me no too long ago
that 6400 baud FLEX is actually a 3200 baud signal, with four concurrent
phases. There is NO true 6400 FLEX, except in terms of throughput -
double the phases, and you have double the effective capacity while not
increasing signal bandwidth. The end result is that you have four data
channels operating in parallel on one frequency, each with a throughput
on their own of 1600 bits per second. So you may want to check if this is
the case in the signals you're trying to recieve... your 3200 bits per
second signal may actually be a "compressed" 6400 bps signal.

Beyond that, he wouldn't (couldn't?) give any more information on
the specifics of the protocol.

(LEGALEZE: I don't advocate the decoding of paging signals not originally
intended to be received by you, as in the US, this may constitute
violation of the ECPA). =)

For my part I had great pleasure last summer to contact U.S. amateurs
from my sailboat with as little as 10 Watts output ... in Morse of
course.
I like CW (Morse) because it is KISS (Keep It Simple, Stupid), just like
anything else I install on board.
Of course we will soon have global cellular phones (Inmarsat, Iridium)
and there will be no more need for the MF, HF and VHF bands. Just as the
invention of the automobile has stopped people from riding horses, or
the invention of the marine engine has removed all sailboats from the
earth, or the snow-scooter has prevented people using ski. Get my drift?

Well, why mess around with buying things we may not want or need?
No need to be dishonest about our intentions to buy or not to buy. Store managers are more likely to call if they think ALL customers
might be dissuaded from buying at RS.

How is that accomplished? We take to the sidewalks with picket signs, advising potential RS customers--all potential customers--of their policies, the effect of which is to deny information and force repairs through their auspices only, not to mention the untoward effect the policy has on hobbyists and emergency communicators.

The ideal situation for picketing and publicity would be:
* 3-5 people with picket signs
* Leaflets that describe the issue and ask potential customers not to
buy at RS until the policy changes
* Find a RS store with a public sidewalk out front and that is close to a TV station. The public sidewalk insures you are not on private property. Nearness to the TV station increases the chance the TV stations will
show up for 10 minutes for a quick interview and video footage.

How does a person get the media out?
* 2-3 days before the picketing, send (or fax) all the media a "Media Advisory." The Media Advisory is basically an alert to an event with background information. Be sure to include a contact name and phone number, and a summary of the issue.
* The night before the event fax a News Release to the media. It should be written like a news story, complete with quotations from a person who
will be at the picket line.

I would be happy to provide editorial review of a media advisory and news release should someone need help for their local area.

You must have some sort of "magic" scanner that can hear "Digital Spread Spectrum" cordless phones.

I'd be surprised if all you needed was a cable with the proper
pinouts. I suspect that the radio will want TTL volatage levels (~5v)
and the computer will want RS-232 levels (up to 25v, but usually less).
Plugging those two into each other without a level converter could be,
uh, interesting.

Just bear in mind that the original 1984 ECPA was passed during the Reagan administration. The 1994 ammendment was passed by a Republican controlled House. So it appears no one in either House likes scanners!!!

: I'm not a fan of Democrats, but I really think Old Newt Gingrich is behind the
: scanner grab. He is the one who was illegally taped.

: DRD

Not only that, but if it passes (I have not been watching it that closely),
you have to think about who has a majority in congress! That means it is
the republicans who will be making it a law. Not the democrats. They
can't stop it from happening, only the republicans can do that. Think about
that for a minute before bad mouthing an organization.

Vote independent next time. Maybe we can shake 'em up enough to get them to
listen to us the people for a while at least. Better yet, Run for office!

You know what folks? I, for one, am sick of reading this off-topic senseless line of crap from the likes of John Mackey. All he does is piss people off. I am not new to this NG, by a long shot, and I have yet to see ONE useful posting that wasn't laced with anti-Bill Cheek or whoever his enemy du jour was at the time.

We shut up that troll Emilio by not responding to his drivel, lets do the same for our "pal" John Mackey.

So long John, Goodbye and good riddance.

> he picked the $18 one.

This is probably something the news guy failed to mention:

If the radios are trunked, the problem was probably because the radio has
to listen to the data channel for a channel assignment before it can
transmit anything. This means you're not trying to hit the radio in the
parking lot just outside, but a repeater on top of the police station, or a
hill somewhere. The radios could probably have received each other, but the
one inside may not have been able to receive the controller, therefore, it
couldn't transmit. The problem is even worse if this is all occurring on
800mhz, which does not penetrate buildings as well as VHF.

Not to say that a $18 radio performing better than a $2500 taxpayer funded
unit is acceptable, but did the news guys try using a "direct mode" on
these units? Some radios (and for $2500, these certainly should) have a
direct mode, where the units transmit and receive on the same frequency,
instead of going through a repeater. That would have made for a much more
accurate comparison.

talkies at Radio Shanck and another
> pair at a toy store, for $18 =
each. The toys worked just fine. At the
> end the =
announcer asked the cop which he'd prefer in an emergency, and
> =
he picked the $18 one.

This is probably something the news guy =
failed to mention:

If the radios are trunked, the problem was =
probably because the radio has to listen to the data channel for a =
channel assignment before it can transmit anything. This means you're =
not trying to hit the radio in the parking lot just outside, but a =
repeater on top of the police station, or a hill somewhere. The radios =
could probably have received each other, but the one inside may not have =
been able to receive the controller, therefore, it couldn't transmit. =
The problem is even worse if this is all occurring on 800mhz, which does =
not penetrate buildings as well as VHF.

Not to say that a $18 =
radio performing better than a $2500 taxpayer funded unit is acceptable, =
but did the news guys try using a "direct mode" on these =
units? Some radios (and for $2500, these certainly should) have a direct =
mode, where the units transmit and receive on the same frequency, =
instead of going through a repeater. That would have made for a much =
more accurate comparison.

I am just curious about something: Why would you want to tinker with a brand new radio, and risk hosing it, voiding the warranty, and ending up with a $200-$400 paperweight?? What mod could you possibly need in a radio that has triple conversion, 300 channels, and trunking capability?

Every day I see a posting in this NG from some chucklehead who wants to listen to cell phones on his brand new TrunkTracker. "Mommy, we want cellular {whine}" WHY? The most you can expect to hear is some knucklehead calling his psychic, or getting in a fight with his girlfriend! Trust me I know!

C E L L U L A R I S B O R I N G ! ! ! !

Why listen to something as boring as real estate agents kissing some clients ass so they will buy a house? Or construction workers discussing what kind of concrete they want to use? YAWN!!!

Why listen to busy signals and ringing and dial tones all day? You might miss something actually interesting going on on one of the public safety channels!

If you want to listen to cellular phones, it won't happen on your new Trunk Tracker. Get an old scanner like the pro 34 or the "pre ECPA of '86" pro 2026. Perform the mods shown on the internet and voila! Cellular. Listen for about a week and you'll never want to do it again. (Well, almost never ;-))

>I was under the impression that it had been 'fixed'. I thought that Tauzin had been quoted as saying that he had got the amatuer/hobbyist/LEO/Firefighter message loud and clear, and was re-writing the bill to accomodate our concerns.

Tom, and others,

While the new version of H.R. 2369 is much improved, there are still several questions unanswered.

First, the new H.R. 2369 has a provision not included in the first bill that bans scanners capable of converting digital transmissions to analog voice audio. This may prohibit the development of scanners capable of monitoring Ericsson EDACS and Motorola ASTRO public safety systems.

Second, although the exemptions included in chapter 119 have been incorporated into H.R. 2369 there some question about what is covered by those exemptions, particularly in the shortwave spectrum.

Finally, although the scope of H.R. 2369 has been narrowed from commercial mobile radio service to cellular and PCS only we still haven't been advised exactly what frequencies will be effected.

We've made headway, and Tauzin has been very responsive to out concerns, no doubt about it. But the battle still has not been completely won.

I agree...RS will fix nearly anything. I do most of my own work but have
on occasion used their service. The prices are fair and they do an above
average job.

Also, for a few bucks you can get the service manual for any RS scanner.
And I don't mean just the owners manual...they'll sell you the complete
schematic, alignment instructions, etc. It is rare that a manufacturer
make this data so freely availible to the average Joe.

Rock on,
Charlie

4075. BC895 Update

Newsgroup: rec.radio.scanner
Date: 1997-11-15 00:00:00 UTC
From: pro2042@aol.com
Message-ID: <19971115143300.JAA03067@ladder02.news.aol.com>
Source record: 180319

Bought a BC895 from Copper Electronics and paid $279.99, which is a pretty good price based on the comparison shopping that I did. Shipping by 3-5 day UPS added $24.75, which seems a little high but I can't complain--placed the order on Tuesday morning and received the scanner on Friday morning.

Nicely built scanner; performs as advertised. Actually, better than I expected.

My only quibble is that the scanner did not come with any information about the computer control scanning features. There's a brief mention in the operating guide but that's it. Luckily, several people have provided info on where to go to get the meat and potatoes.

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than 70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor receivers of various brands in my collection. This article describes a few of the FM receivers in my collection, and other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass, Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass, Monitoring Times, May 1995.

I have published full length reviews and modifications of these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan
Dec 1997 - Uniden/Bearcat BC985XLT Trunktracker |

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700

Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob | Parnass, in Monitoring Times, December 1996, for a review | which includes quantitative test results.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring | Times, March 1997, for review which includes quantitative | test results.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band.

Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997, for a review | which includes quantitative test results.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good

internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on

vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC895XLT TrunkTracker(Uniden): 1997 vintage. Base with 300 | channels in 10 banks. Covers military air band, but other | frequency coverage is limited compared with the BC9000XLT. | Predetermined AM and NFM modes not selectable. Can scan or | search in conventional or trunked domains but not at the | same time. Scans Motorola Type I, II, IIa 800 MHz trunked | systems, but only one trunked system at a time. Programming | Type I and IIa systems requires knowing the Fleet Map ahead | of time or else using exhaustive trial and error. Weather | alert siren. Built-in CTCSS decoder and tone finder. A | query feature identifies duplicate memory channels. Test | unit scans 85 channels/sec and skips empty channels. Triple | conversion, 380.8 or 254.4, 10.85, and 0.45 MHz IFs. 800 | MHz images in commercial and military air bands attenuated | over 35 dB. For technical test results and a review, see | "The Uniden Bearcat BC895XLT," by Bob Parnass, AJ9S, in | Monitoring Times, December 1997. |

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for

each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion,

254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at www.grove.net for | a review which includes quantitative test results.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered

different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate.

Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. For a quantitative test report, see "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997, for a review | which includes quantitative test results.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound

Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort

memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997, for a | review which includes quantitative test results.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in | Monitoring Times, October 1996, for a review which includes | quantitative test results.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in

early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50 frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997, for | a review which includes quantitative test results.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge both Radio Shack's optional, monolithic NiCd pack, and AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997, for | a review which includes quantitative test results.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals. Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned

out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock- outs?
FR104	6	X			no
FR105	6	X			no
FR2512	24	X			no
FR2513	24	X			no
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes

FR2525 10 X yes yes
FR2526 10 X X yes yes
FR2527 10 X X yes yes
FR2528 10 X X yes yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner

crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times | magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and

wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

http://patent.womplex.ibm.com

rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article discusses the purchase of used scanner radios
and includes these topics:

1. Motivation for buying a used scanner
2. A used scanner may be a broken scanner - where to get
it fixed
3. Evolution of the scanner
4. Obtaining crystals
5. Keyboard programmable scanners

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

Anybody with enough money can buy a brand new scanner, but
you can save lots of money if you get a good deal on a used
scanner. Hamfests are probably the best place to find used
radios, but you must be familiar with the equipment.
Hamfests are repleat with older radios you won't see in
today's catalogs.

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. I purchase
most of my receivers at hamfests or horsetrade with other

radio hobbyists.

A Used Scanner May be a Broken Scanner

Getting a bargain is not without some risk. I have had sellers look me square in the eye and tell me their radio worked fine -- when it really didn't.

Buying a used portable scanner is riskier than buying a mobile or base model. Portable scanners are subject to more physical abuse and many have been dropped. If a radio has been dropped, the laws of probability dictate that the first point of impact was probably a corner, so be sure to examine each corner for evidence of trauma.

Scanners used in mobile service are subject to vibration, dust, and temperature extremes. This shouldn't dissuade you from buying a used mobile scanner, but be aware of possible complications.

You should have some recourse if the radio you buy turns out to be defective. For hints on fixing older Bearcat base scanners, see "Tips for Fixing Bearcat Scanners," by Bob Parnass, AJ9S, in March 1996 Monitoring Times magazine.

If you can't fix the radio yourself, you can pay to have the manufacturer or a service clinic repair it for you. Radio Shack repairs scanners, and Uniden can repair newer Bearcat models but often refuses to service older models, claiming they are "unrepairable" and carving the letter "U" on the cabinet.

G & G Communications (telephone 716-768-8151) is a family owned company which repairs scanners and stocks parts and crystals for several older models. They usually don't repair AOR scanners due to lack of manufacturer support. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

The re-incorporated Electra Corporation, (317)326-4419, is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 251 N. 300 W. Greenfield, IN 46140-8496.

Evolution of the Scanner

It helps to understand some scanner history before shopping for a used scanner. You will likely see radios from many vintages at a hamfest, and should avoid buying early units unless you are a scanner collector.

One of the earliest ancestors to the scanner was the converter. Manufactured by Tompkins (Tuneaverter), Petersen, Bearcat (Lil Tiger), Midland, and others, converters were made to operate in conjunction with AM radios. Then came wide band monitor receivers, in both tunable and crystal control models, like the Radio Shack PRO-2B. Truthfully, converters and tuneable FM receivers are interesting but don't work well by today's standards.

While tuneable receivers were in vogue, solid state technologies supplanted tubes. Better performing, narrow band crystal controlled units, like the Sonar FR-105, followed. These units did not scan, rather channel selection was accomplished using a simple rotary switch. Sonar even made a 24 channel unit, model FR-2513, in which crystals were held in a rotary "turret."

The earliest scanners, like the 1968 vintage Bearcat BCH, BCL, and BCU models, did not provide individual channel lockout capability. Electra didn't use the term "scanner" and instead called these innovative radios "business receivers." Other models, like the SBE Sentinel, employed a "Channel 1 Bypass" switch so a user could lockout channel 1.

The first scanners came in single band models, followed by multiband models. As two-way radio users started to populate the 450 - 470 MHz band, consumers were forced to pay a premium for UHF scanner coverage. Some multiband scanners, like the Electra's Bearcat III, required an optional circuit board for each band.

There were scanner mutations, designs which never evolved -- odd combinations of AM broadcast receivers with VHF-FM receive capability, like the flamboyant turquoise Sonar Sentry FR-103 portables, Electra's Jolly Roger, and GE's Surveyor series (see US patent 4,011,515, granted 3/8/77). Lafayette Radio Electronics offered a few CB transceivers with VHF receiver capability. These poor performers didn't interest consumers of that era and you should avoid these models unless you are a scanner collector.

The first programmable (crystal-less) scanners were difficult to program. Users had to look up frequencies in a code book and tediously program the information into the scanner in binary form. Some models, like the Tennelec MCP-1 (see US patent 3,961,261, granted 6/1/76), Bearcat BC-101 (see US patent 4,179,662, granted 8/4/78), and Radio Shack COMP 100, resembled Altair or PDP-8 computers, with a row of 16 or so toggle switches. Instead of toggle switches, the Regency WHAMO-10 was programmed by breaking teeth from metal combs. See US patent 4,057,760, granted 11/8/77. The GRE-manufactured SBE Optiscan (and its Sears clone) required poking or covering a series of holes in

plastic cards which were then inserted into a slot on the front panel.

Keyboard Programmable Scanners

Both Bearcat and Regency, as well as Radio Shack offer some good models. I would avoid the Bearcat 100, and older scanners made by AOR, JIL, Fox, Tennelec, and Robyn.

Scanner features often differ not only by model but by manufacturer. For instance, most Radio Shack and Bearcat programmables allow enable/disable of the delay function on a per-channel basis. Older Regency units permit the delay to be enabled/disabled only globally, that is, for all the channels at one time.

All the older Radio Shack scanners were made by General Research Electronics (GRE). Uniden began making scanner models for Radio Shack in the late 1980s, and now supplies about half the Radio Shack scanners. The older GRE-made models scan a bit slowly and have a higher level of synthesizer noise. Most have too much hysteresis in the operation of the squelch control, but this can be fixed completely by replacing one resistor. Good, detailed shop manuals are available for Radio Shack units for $5 - $12.

In the name of cost cutting, some models have done away with the concept of a "channel bank", i.e. the ability to select/deselect a group of channels at a time. The bank concept was a good one. It may be inconvenient to operate a 30 channel scanner without banks (e.g. Regency MX3000, HX1000) if you operate the way many scanner hobbyists do.

If you want to buy an American-made scanner, you will have to buy an old model. Until the mid 1980s, rivals Regency and Electra (Bearcat) built most of the scanners in their Indiana and Puerto Rican factories. Uniden, a large Japanese electronics company, purchased the scanner product lines of both competitors and moved production to Asia.

My favorite VHF/UHF receivers are the the Uniden/Bearcat BC9000XLT, the 400 channel Radio Shack PRO-2005 and PRO-2006, and the ICOM R7000, R7100, and R8500. The ICOM models are more "communications receiver" than a conventional scanner.

For portable use, I prefer Uniden/Bearcat BC3000XLT and older Radio Shack PRO-43.

Obtaining Crystals

If you do purchase a crystal controlled scanner or monitor receiver, you will probably want to buy more crystals to

cover local frequencies.

Scanner crystals may be ordered from your local Radio Shack store or from one of the companies below. Be sure to specify the operating frequency you want and the brand and model of scanner.

Some companies may ask you to send a schematic of the scanner or require more detailed information, like series or parallel resonance, load capacitance, etc.

Electra Corporation stocks crystals for the Bearcat scanners:

Electra Corporation
11915 E. Washington St.
Cumberland, IN 46229
Phone 317-894-3229

Crystals for Bearcat and other models are available from:

American Crystal Co.
1623 Central Ave.
Kansas City, KS 66102
tel. 913-342-5493

Bomar Crystal Company
201 Blackford Ave.

Just to clarify - the First Amendment is generally considered to
protect *political* speech. Defamation of character, yelling "Fire!"
in a crowded theatre, and lying in product advertising is not exactly
something that most people would encourage.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?" This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores for under $13. Police Call Plus is

basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good

book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times | magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a

frequency label and write down the frequencies stamped on the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are

really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using

call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared.

PRO-2004: Dead

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 watt resistor mounted vertically on the main board.

archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

The original Bearcat scanner line was manufactured by
Electra Company, a division of Masco Corp of Indiana. In
the mid 1980s, Uniden, a Japanese company, bought out the
Bearcat scanner line and Uniden's first Bearcat scanner was
the BC800XLT model.

Most of the models discussed in this article are
base/mobile units made by Electra during the 1970s and
1980s although some of the capacitor failures occur in the
Uniden BC800XLT, too.

Electra stamped all of its scanners with a manufacturing
date code on the rear of the cabinet. The code is comprised
of a single character (C = Cumberland, Indiana, P = Puerto
Rico), followed by four digits denoting year and week the
radio was built. For example, "P8422" denotes the radio was
made in the Puerto Rico factory during the 22nd week of
1984.

One way to roughly estimate a radio's age is to examine the
4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most

recent date stamp.

Schematics, Owner's Manuals, and Parts Available

The re-incorporated Electra Corporation is able to effect repairs on some older (pre-Uniden) Bearcat scanners. They sell crystals, antennas, power cords, owner's manuals ($11 ea). Electra Corporation is located at 11915 E. Washington St., Cumberland, IN 46229. Phone 317-894-3229.

To order a user manual for an Electra/Bearcat scanner from Uniden, call (800)235-3874 extension 2553.

Some schematic diagrams may be obtained from Uniden/Bearcat's parts department, (800)297-1023. Uniden currently charges a flat rate of $54 for scanner repairs. They will repair and return "out of warranty" items without an estimate unless the repair charges exceed the flat rate charges.

The phone number for repair is (800)297-1023, too. I recommend you call repair before sending the broken scanner. Items for repair via UPS (include receipt if still under warranty) are usually sent to:

Uniden America Corp.
4700 Amon Carter Blvd.
P.O. Box 95002
Fort Worth, TX 76155

If Uniden doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

Common Construction

Most of the classic, metal-cased Bearcat base/mobile models were built using two printed circuit boards:

1. a "radio board" containing the synthesizer, RF, IF, and audio stages, and
2. a "feature board" containing the microprocessor controller and memory circuitry which gave each model its own personality.

Although there are various vintage radios boards, they all have similar circuitry.

Bad Solder Joints Common

Before addressing specific symptoms, circuit boards in the malfunctioning scanner should be inspected for poor solder joints.

The Electra/Bearcat BC350, BC300, BC250, BC220, BC20/20, BC211, BC210, and BC210XL models were hand assembled, and every one I've serviced had several connections that were either soldered poorly, or not soldered at all.

Resoldering joints on the ribbon cable connecting the RF and keyboard logic circuit boards in a BC250 attenuated the microprocessor/synthesizer hash noise noticeably.

A Bearcat 20/20 was experiencing periodic loss of memory on some, but not all channels. When the problem occurred, the frequencies on some channels would be completely changed. On other channels, the frequency would still be intact, but the channel would be locked out, and the delay toggled from "on" to "off". Some channels were not affected.

The 2 "AA" memory backup batteries, and their holder, tested good. Much time was spent tracing logic, heating and cooling components, and making voltage measurements.

One of the secondary leads from the power transformer was connected to the main circuit board through a hole drilled through foil traces on both the top and bottom sides of the board. A close examination revealed that this lead had been soldered only on the top of the board - the bottom side had never been soldered.

Soldering the lead on both sides of the board solved the memory loss problem.

Symptom: Blank Display

The BC300 scanner, and several other Bearcat models, employ a switching type power supply stage to generate plus and minus voltages in excess of 20 volts DC. When this switcher fails to function, the display goes blank, but the squelch control appears to work, and white noise can be heard in the speaker.

In almost a dozen of the BC300 and BC800XLT scanners I've fixed, C98, a capacitor in series with the primary of the switching transformer failed, causing the output of the supply to drop below the level needed to power the display. The switching transformer is mounted on the RF circuit board, and is much, much smaller than the main power transformer, which is usually fastened to the metal

chassis. The 22uF/16V capacitor used for C98 in early BC300s was marginal, and was replaced with a 47uF/25V capacitor in later units.

Paul Grohe replaced a failed C98 with a low ESR (equivalent series resistance), high frequency, switching regulator grade capacitor, e.g. a Panasonic HF series capacitor. He also recommends adding a 0.1 ceramic capacitor in parallel with C98.

I replaced the 22 uF capacitor in the switching power supply stage of a BC210XL which caused the same symptom. Other capacitors in the switcher stage have failed. C114, a 4.7 uF/35V tantalum capacitor failed in at least one BC250, causing the display to blank.

A more sinister problem affects the switcher in earlier models. The switching supply stage in the BC250 and original BC210 is driven by a clock signal derived from a custom Exar NC57902 divider integrated circuit (designated IC6 in the BC250 scanner). I've seen this divider IC fail in several BC250s, causing a blank display (except for a decimal point in the BC250's rightmost digit). This custom IC is no longer available from Uniden.

Failure of IC9, the 9 volt NJM78M09A regulator in a BC800XLT is another cause of a blank display.

Symptom: Invalid Frequency Displayed

A common Bearcat 250 malady is manifested by an invalid frequency displayed on the readout. This condition is temporarily "cured" by unplugging the AC line cord from the wall, then replugging it. This condition is symptomatic of a power supply problem in which Q204, a Texas Instruments TIP-29 located on the feature circuit board, fails.

A Philips ECG291 will work as a substitute for the TIP-29. Don't try a Radio Shack substitute, it hasn't worked. See Martin Toomajian's article, "Bearcat 250 Erratic Display Cure", in January 1987 Monitoring Times.

A similar problem in the Bearcat 20/20 was discussed previously in the section on bad solder joints.

Symptom: Squelch Won't Eliminate White Noise

Most Uniden/Bearcat base/mobile scanners feature an AUTO squelch position, actuated by rotating the squelch knob fully counter clockwise. The BC350 used a separate pushbutton switch for this purpose. These scanners use a flimsy potentiometer (designated R81 in BC300s) internally mounted on the RF circuit board, to set the level of signal

required to open the squelch when in the AUTO position. This pot also has an effect on the squelch action in the non-AUTO mode, and determines at which point the squelch knob must be positioned in order to silence the radio.

Although the potentiometer is adjusted at the factory, changes in component values due to aging often necessitate readjustment of this internal pot. Misadjustment of this pot has been the cause of "no squelch" complaints in two BC300s and a BC250 I fixed.

Another squelch failure is due to a blown transistor that acts as the electronic switch in the squelch circuit. I replaced this transistor in only one BC300, so I don't know if this is a common problem.

Symptom: Scanner Completely Dead

In Bearcat scanners using an internal power supply (e.g., BC350, BC250, etc.), the main power transformer is connected directly to the AC line. Since the on/off switch is on the secondary side of the transformer, current flows in the primary as long as the AC line cord is plugged into an active AC outlet. These transformers contain an internal circuit breaker, not visible without unwinding (destroying) the transformer. The internal breaker is known to fail prematurely in a batch of Bearcat power transformers.

If your scanner is completely dead, check the primary of this transformer for an open circuit condition.

Symptom: Keyboard Bounce

After much use, the Chromerics keyboards in Bearcat scanners start to wear out. The first sign of trouble is usually keyboard bounce on the most frequently used key, e.g., the MANUAL key. Replacement keyboards are usually available from UNIDEN, but replacement requires dexterity, as one must take care not to tear the flat, flexible strip connecting the keyboard to the logic board.

Symptom: Keyboard Completely Unresponsive

The keyboard matrix is "scanned" by the microprocessor. Another problem is when none of the keys seems to function; the receiver just keeps scanning in spite of key depressions. I found this condition in a BC210XL scanner owned by a heavy smoker. Perhaps nicotine smoke was to blame, as the resistance between two input port pins on the microprocessor was down to about 1000 ohms, fooling the microprocessor into believing that a key was stuck in the "down" position. Scraping the circuit board between the

two pins with an X-Acto knife fixed the problem.

Uniden/Bearcat BC200XLT Portable
Loss of Audio and Dial Lamp

If you can program frequencies into your BC200XLT but there is no audio and the green backlight no longer functions, a tiny transistor may have failed.

Check for a defective PNP surface mount transistor, Q201 (2SB815B6-YDY). Q201 is used as a switch to furnish 8 VDC to several stages of the BC200XLT. Its main purpose is to switch off power hungry stages of the BC200XLT when the CPU thinks the NiCd voltage has fallen below a threshhold. That's an attempt to limit the current drain on weak NiCds to avoid permanent damage.

Q201 is located on the foil side of the "Micom" board, adjacent to the black multi-pin connector which mates the Micom and main boards together.

Q201 can be destroyed by a few different causes, primarily, by something in the scanner drawing too much current through it. In one case, capacitor C36 shorted. It's a 220 uF 10v electrolytic, located on the component side of the main board, connected from pin 8 of the audio IC (IC2 NJM386SL) to ground. Capacitor C55 shorted in another BC200XLT. In a pinch you bypass Q201 by soldering a short piece of bare wire between the collector and emitter, but you must first fix the component which caused Q201 to fail.

BC9000XLT: Loss of Sensitivity

John Ward has fixed two BC9000XLTs which suffered from "low sensitivity." He fixed the solder joint where the antenna jack connects to the circuit board. In both cases the tab from the board was on the opposite side of the jack from where the little blob of solder applied at the factory was located.

It was an intermittent problem that depended upon the position of the antenna cable - if the weight of the cable placed tension on the jack in one direction contact was made and the radio worked fine. If the cable placed tension on the jack in the opposite direction contact was lost and so was reception. The gap was barely noticeable.

Other Problems

Complaints of low audio output and occasional microphonics in three Uniden/Bearcat 800XLTs were caused by a bad 47 ufd electrolytic capacitor in series between the external speaker jack and audio amplifier.

Andy Domonkos reports he often uses a tape recorder
connected to a Uniden/Bearcat BC890XLT. RL-1, the carrier
activated relay inside the BC890XLT wore out. Andy found
the identical relay sold at Radio Shack (part #275-232) and
says the BC9000XLT uses the same relay, too.

4086. Ideas for 800 Mhz Antenna

Newsgroup: rec.radio.scanner
Date: 1997-11-15 00:00:00 UTC
From: David Hitchner <nospam@nowhere.net>
Message-ID: <64kjjg$1hl@mtinsc03.worldnet.att.net>
Source record: 180373

I looking for ideas for increasing the 800Mhz range of my BC235XLT
Trunktracker.
The local police tower is well within range, but the sheriff's tower is on
the fringe.
I've got the GRE Super Amp. It helped some, but I'm thinking the antenna
may
be the problem. I'm using the stock antenna.

Are there any handheld antennas tuned for the 800Mhz range? I've tried to
find
a cell radio antenna, but none have BNC connectors. I've heard of the
Condor
antenna. Does it help in the 800Mhz range?

Thanks.

Hi Rich,
Just read a post you made for a guy interested in handhelds and thought I would ask you; Do you know if/when Uniden will be coming out with a new handheld to replace the BC/UBC-3000? I had heard a rumor or two and would really like to know. I now have a UBC-3000 which I think is the best handheld I have ever used. So much so that I want to either A. Buy another one, B. Buy a USA BC-3000, or C. Wait and hope there is a new model coming soon might add an alpha numeric display.

Your knowledge on this would be greatly appreciated.

Please E-mail me at studioded@aol.com

Thanks,
Dave

Then you must not read very many of the messages posted. Would you like me to forward some to you or post them here? (although I doubt that would remove your DENIAL of the FACTS)

> and it ONLY came when he
> threatened to boot you fromn the FidoNet Scanradio echo, and then DID
> so, when you refused to follow the rules that the rest of us followed.

FUNNY, Bill was kicking about 5 people a day off of his Fido echo, YOU FORGOT TO MENTION THAT. When Bill took over moderation of that Fido echo
posts went from about 50 a day or 5 or 10 a day, YOU FORGOT TO MENTION THAT
TOO. OBVIOUSLY, MANY PEOPLE GOT KICKED OFF, BUT YOU DON"T MENTION THAT EITHER.

BTW - I was speaking against Bill BEFORE he became moderator. That is WHY he kicked me of within the first few days he became moderator.

Also, your comment about "> you refused to follow the rules that the rest of us followed" is VERY misleading. For example, Roger Cravens was allowed to post his weekly garbage yet others were kicked off for the same thing (everyone knows how Cravens was a massive kiss-ass for Bill). If EVERYONE had been allowed to follow the SAME set of rules things would have been VERY different.

> I doubt you've EVER had any business with Bill that would give you cause
> to doubt his honesty OR his skills.

You are wrong.

Regarding honesty, I have caught Bill is lies many times.

Regarding skills, anyone who would suggest tuning a RF oscillator with a metallic tuning stick (which Bill did) OBVIOUSLY has some VERY POOR SKILLS in
RF electronics.

> You probably know LESS about Bill than anyone reading this newsgroup.

Coming from you that means nothing. Bud, you know LESS than anyone reading this newsgroup.

4105. Re: Ideas for 800 Mhz Antenna

Newsgroup: rec.radio.scanner
Date: 1997-11-15 00:00:00 UTC
From: Tom Gasta <tomgasta@worldnet.att.net>
Message-ID: <64kr4g$jot@bgtnsc02.worldnet.att.net>
Source record: 180392

David,

You can get commercial 800Mhz portable antennas with BNC connectors and this is a vast improvement over the dummy load, I mean antenna, that comes with it. However, I recently began using an Icom R-10 antenna on my BC235 and found that its 800 Mhz was really good. I ordered one from Icom just for the BC235. As an added bonus, it looks really good on the TTracker, and is broad band for all the other freqs the TTracker can use. The antenna is matching gray, and the connector is fully enclosed by the rubber so once installed on the BC235, you dont even see the BNC. There is only one minor drawback, the Icom antenna is $29. Most any two way shop can order you an 800Mhz only antenna with BNC, but you will loose efficiency on the other bands, which may not be of concern.

Tom

ONLY spread spectrum 900 MHz digital cordless phones are *nearly* 100%
immune from evesdropping. I say nearly because no doubt eventually someone
will build a device to monitor them. There is nothing on the market *that
I know of* right now that you can use to listen to them.

This is true, but in light of the divisive nature of much of the political rhetoric bandied about nowadays by groups who use the banner of "diversity" it could well be that immature and unflattering remarks of an ethnic nature ESPECIALLY WHEN MADE IN PRIVATE no matter how they may have been intercepted may be covered by the First Amendment as well. It seems clear that what some like to characterize as "hate speech', where not designed to create immediate action or encourage specific danger to others is clearly protected by the First Amendment. If it isn't covered then the First Amendment means nothing.

Hey all.....

A while back, I heard of some review or comparison test done between the Radio Shack PRO-2035 and the PRO-2006.
Any idea where I can find this review, or what the outcome of this review was??? Ive got both radios, and Im trying to find out which radio has the best "performance" in the UHF Military band (220-400 mhz) Once I find out, Ill probably end up putting the Dressler antenna on that radio.....

Also --- any idea how to monitor voice comms from MILSATCOM?? Ive got a hundred freqs in there (around the 260mhz range) and Ive got 'em set for Narrow FM mode. So far Ive picked up NOTHING!!! Any suggestions???
What am I missing??

Thanx Much!!!!!

I think the term you're looking for is ARPANET. It is (was) an advanced computer network set up by ARPA (Defense Advanced Research Products Agency) to link universities, think tanks, and military research installations. The theory was if many switching stations were knocked out by a nuclear attack, there will still be some switching stations left over to handle message traffic, hence the many nodes on ARPANET/Internet. I got this from the glossary in _Top Secret - Espionage Role Playing Game_ - TSR Hobbies - Second Edition, February 1981.

Yes well I have a problem with a Uniden SC-150B. I bought one of those
RS telescopic antenas and the scanner got dropped a lot. It sits on a Stereo
speaker because that's the best place for the 800 MHz that I listen to coming
in. Now that it hit its last fall, its nearly stopped picking anything up.

Pressing on the side of the antenna will restore it until you let go. In
fact it is in and out. You can connect the antenna and sometimes it will
receive. Sometimes the antenna does not function.

Will a new (Rubber duck) antenna solve this problem or is it more likely
a loose connection in the scanner? (IE get me a used scanner from here
with conversion and cell mods)

Enter the world of amateur satellite communications with AMSAT - Radio Amateur Satellite Corporation. Satellites are amateur radios highest frontier and you can be a part of it. Like working DX but hate poor HF band conditions? Work DX via satellite and leave all be qrm, qrn & qsb behind. Like Digital modes? Upload a message to a pacsat and in 45 minutes a ham on the other side of the world could read it and respond to it. You can leave a message with the cosmonauts on the Mir space station or talk to the astronauts on the space shuttle during SAREX missions. You can also play a part in helping AMSAT complete it latest project, the Phase 3D satellite. Phase 3D is ham radios largest and most complex satellite to date. Construction and testing of P3D will soon be complete. Ham radio satellites mainly operate above 144 mHz, so you won't need a fancy ham radio license to use them. A tech class license will work just fine.
Of course you don't need to be a member of AMSAT to enjoy all these things, But your membership will help keep present and future projects going.If you've decided you won't join Amsat at this time, but would like to donate to Phase 3D. You can send your contribution to:

AMSAT-NA
850 Sligo Ave. Suite 600
Silver Spring, MD. 20910-4703

or call Martha at Amsat: (301) 589-6062

For more info about AMSAT
and Phase 3D see: http://www.amsat.org

>you tune to while using the navigation radio.

But the standard way for pilots to check the ident is to match the Morse symbols with the pattern of dots and dashes printed on the chart, next to the other data for the navaid. There is no requirement or even expectation that pilots will actually *know* Morse code.

Just moved into my new place here in Windy Western Kansas. Got a nice 2BR house, so now it's time to start "decorating" the roofline. Not looking for anything fancy or elaborate (want to stay on the good side of the landlady :-), but I'd like to put up an omni for 10/11 meter and a discone or similar for 2m/70cm and scanner use. An A-99 would be great for 10/11, as would an older groundplane/Starduster/Penetrator/etc. And a broadband VHF/UHF with transmitting capability on 2 and 440 would work perfectly for these radios and the scanner. If y'all got some extra coax and/or mounts laying around, that would be good, too. Snow's gonna be falling pretty soon, so I want to get these up ASAP. What do you have that you want to get rid of?

-Drew in Windy Western Kansas-

: Says who? If your statement is accurate, then why are hams the ONLY ones
: to use Morse? The military doesn't use it. The government doesn't use
: it. Commercial radio doesn't use it. Very few hams use it. NO ONE uses
: it, except a few old geezers with an attitude.

I usually keep outof stupid flamefests like this, ... But:

I get pissed, when people base their arguments on assumptions that are
completely wrong, rather than facts.

Fact is:

If you turn your dial up and down the shortwave bands, you will, at all
times, be able to pick up a few hundereds of commercial (non-ham) stations
that make heavy use of morse code.

Worldwide *ALL* of the organisations you menthioned above *DO* use
morse code.

Just to get this straight.

Regards,
Friedhelm

Greg Dean (n9nwo@gte.net) wrote:

: I am becoming convinced that Perot works for the democrats. He always
: steps in to swing the election their way. He seems to pull the Reagan
: democrats out of the election.

My late grandmother thought that too. I don't know myself, but I though
his pulling out of the 1992 election and coming back in again was a
little fishy. However, if Perot wasn't in the picture, I would say Bush
would have won.

: However, if he should be able to win a law suit that would open the
: process to third parties, he would be doing us all a favor. And third
: parties would distroy the Democratic Party as it is a mix of groups that
: have little in common. The Greens would be the first to leave.

Could be. The Democrats appeal (or try to) to various interest groups
although they don't succeed at making everybody happy. Still the
Republicans are like that in a way because there are varying factions
amongst them too. Heck, I'm more of a Teddy Roosevelt/Pat Buchanan
Republican and I always get into it with the free-trade side of the Party.
I think the boat needs rocked after 100 year or so of the current
Demo/Repub battle we have now.

: Remember, the Germans have 26 parties and most Germans say that even
: with so many parties, nothing changes!!

Yeah, they could be a problem where you don't have a 50% + 1 vote in any
election. I mean Dole got like 37% of the vote, Clinton 47%, and Perot
the rest. I may be a little off, but still, like in '92, their wasn't a
majority. Perhaps the trick is to have the top two or three run off in a
special election.

: Get your newpaper fired up about HR 2369 and HR 1964. It is their
: scanners too that will banned.

Sorry for being off topic but my view is politics enter everything and
affects everything. Politics took the cellular frequencies away from all
new scanners.

> GOOD! WE'RE HAPPY ABOUT THAT!

EXCUSE ME.......... But not in trying to make a Political battle out of this particular issue, I AM a DEMOCRAT and a POLITICIAN. ALSO, I DO happen to be an avid Scanner listener, Ham Operator, and use other types of radios when need be, as I'm involved in Fire/Rescue and etc.

I've been a scanner listener since scanners came out, into Fire/Rescue and Ham, since I was old enough to be.

I don't care what party anyone is from, that isn't the issue here. I DO NOT appreciate EITHER the fact of anyone trying to take away an AMERICAN FREEDOM. DO NOT condemn ALL democrats just for the doings of a few.

Instead of making a political agenda out of this, write to your local Senators and Congressmen/women and tell them how you feel.

It's the few jerks that make all of us look bad, no matter what arena you're in. Be it scanners, ham, cb, politics, etc.

Mr. Roger and I DO have codes, but we don't understand why the morse must be a requirement for HF voice operation. We rather suggest to have more practical exams instead of morse.

> they want everything given to them !

I prove my morse code skills and then complain against it (because the morse code requirement does NOT make senses logically).

I don't complain something just because I don't want to do anything.

Says who? If your statement is accurate, then why are hams the ONLY ones to use Morse? The military doesn't use it. The government doesn't use it. Commercial radio doesn't use it. Very few hams use it. NO ONE uses it, except a few old geezers with an attitude. That should tell you something. I find it humorous that the "know code" faction preaches about how great Code is, yet can't explain why this so obviously great and wonderous communications mode is rejected almost unanimously.

> Please remember that ham radio is not commercial and I for one believe that
> if you can't perfom the basics, how can you ever expect to perform the more
> complex?????

I suggest you put your money where your mouth is and promise not to drive a car until you have learned how to ride a horse. You will also refrain from reading, speaking, or writing English or any other modern language until you have learned how to interpret cave paintings...and so on.

I would buy your "basics" argument except that Code is the "basic" of NOTHING. Once you learn it, then what? Other than increasing your copy speed, where will you go with it? Conversely, Ohm's Law and algebra, for example, are used in higher forms of science and are legitimate building blocks to learning. Code has no application beyond itself.

Furthermore, I wonder how many among the "code snobs" are using memory keyers and computer programs to do the dirty work for them, or use straight keys exclusively. I'll bet a majority of those clowns don't even OWN a straight key.

For the record, I got my ticket the "hard way"; if you're going to rip me, find another angle.

Since I've modified my email return address, the spam has virtually stopped. Unfortunately I made the mistake of posting for a week without a modified address.
Simply modify your return address as I have. Add a numeral or two then leave a signature file that explains what #'s to get rid of to reply. Numbers in emails is extremely common as we all know and the magicware they have simply couldn't be intelligent enough to remove the RIGHT numbers. They may be smart enough remove capitalized X's or the words "nospam" but not certain numerals.

Solution #2: Go to www.hotfiles.com and download "Spam Exterminator". This utility scans your mailbox for known spammers and certain properties in the subject line of emails. If it sees any of the properties of SPAM email (like !!!, or $$ in the header) it dumps the mail and automatically sends an abuse report to them and their ISP, all

without user input. It works pretty well. Good luck to all.....

I am becoming convinced that Perot works for the democrats. He always steps in to swing the election their way. He seems to pull the Reagan democrats out of the election.

However, if he should be able to win a law suit that would open the process to third parties, he would be doing us all a favor. And third parties would distroy the Democratic Party as it is a mix of groups that have little in common. The Greens would be the first to leave.

Remember, the Germans have 26 parties and most Germans say that even with so many parties, nothing changes!!

Get your newpaper fired up about HR 2369 and HR 1964. It is their scanners too that will banned.

Please explain what you mean by "higher quality falks."

I know a lot of CWers (without advanced) who don't know how to change
the freqs by using VFO. Does this make them high quality ??

Ohh.... I have to mention (:( ). You can have advanced license
without CW, but the band set is same as the basic... here in Canada.

> On CW, you get real QSOs with real people (some
>CW DXer/contesters excepted).

then no CWers aren't real people ??

I don't think so...

4144. Re: 1/4 Wave Homebrew Antenna vs Discone Antenna

Newsgroup: rec.radio.scanner
Date: 1997-11-15 00:00:00 UTC
From: JungleJim <junglejim@delta.com>
Message-ID: <346DA703.6D85@delta.com>
Source record: 180503

Since both are 1/4 wavelength they would probably be similar. If you have a home made ground plane vs. a commercial discone I would bet on the discone because while we can make good antennas at home they are often outperformed by the commercial ones of similar designs. May I suggest building a 1/2 wavelength dipole antenna. It won't be broadbanded like the discone but then neither is your ground plane. The discone should cover the entire 225-400 with a low swr and roughly a 50 ohm match. The down side is that a discone and 1/4 ground plane provide unity (0) gain. On the other hand a 1/2 wave dipole will provide (in theory) 1.7 db of gain over both other ants. This is a small amount and some would argue its usefulness but I have built dipoles for many different freqs. and have been satified with most of them. For more information please try out the newsgroup rec.radio.amateur.antenna

Bust of luck,
JJ

4146. Optoelectronics N100 Filter

Newsgroup: rec.radio.scanner
Date: 1997-11-15 00:00:00 UTC
From: fkelcz@facstaff.wisc.edu
Message-ID: <fkelcz.282.000F7ED4@facstaff.wisc.edu>
Source record: 180505

I recently purchased the Optoelectronics N100 FM band notch filter due to local FM radio stations always locking up the Scout freq counter (even miles away). Although the N100 is expensive ($100), I can report that it works very well. Using an ICOM 7100 to measure attenuation, the FM radio signals were cut at least 40 dB. Below and above the FM band, reception was not affected. Attenuation around 65 Mhz was neglibible and at 162 Mhz was also negligible. I have yet to try it closer to the FM band edges (eg. airband 120 Mhz freq). Size is approx 2 " long x 0.75" square with BNC's on both ends (male & female)

(No I do not work for or own stock in Optoelectronics).

Al thanks for the tip about the adjustment screw in the back being possibly a sensitivity adjustment. I haven't messed with it yet and will only do so if I know what its for and have a need.

Mr. Arnold, by now I hope you've gotten the unit to show its stuff.

As of now I've put my unit to a lot of use and have encountered only 1 problem. On rare occassions the onn-off switch doesn't turn the unit on; this is probably a mechanical problem with the switch.

One other note, when you first start the unit, you'll see an annunciator for a speaker flash on briefly adjacent to the lock annunciator. I wonder whether the original plans for the unit included a tone generator to indicate a hit. This would be a nice addition as now you cant tell when you get a hit unless your look right at the display.

Dave, I'm in the same boat, but I thought EEB was going to be helpful.

I wouldn't give you a broken BC 210 for that computer.

I don't know Radio Shed's official policy, but I walked into RS and they sold me the complete service manuals for both my scanners...no fuss, no questions. Perhaps I hit them at a weak moment.

Another possibility: I am a "regular" at the same RS. The droids know me and know I spend a lot of money there. Perhaps they normally would not have given me the manual but found it hard to say "no" to one of thier steadies.

Introduction to Scanning
by Bob Parnass, AJ9S

[NOTES: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

This introduction is intended for people new to the
scanning hobby and is oriented to scanning in the USA.
High level overviews of the following topics are presented:

Why Scanning?
Is Scanning Legal?
What Scanner Should I Buy?
What is a CTCSS and DCS Tone Squelch Feature?
How Do I Determine the Proper CTCSS or DCS Code?
Scanner Antennas
Coaxial Cable Feedlines
Where Can I Buy A Scanner?
Modifying Your Scanner
Scanner Repair Shops
Where Can I Obtain Frequency Information?
Do Your Own Frequency Detective Work
How Can I Use Equipment to Uncover New Frequencies?
Scanner Clubs and Mailing Lists

Why Scanning?

Every day and night, scanner hobbyists are entertained by
what they overhear on their radios. Police cars, fire
engines, ambulances, airplanes, armored cars, trains,

taxis, and buses are all equipped with radios and you can listen to them. You can monitor the local sheriff and fire departments to hear about events "as they happen," before the news reporters hear about them. Hostage dramas, bank robberies, car crashes, chemical spills, neighbor and domestic disputes, tornado sightings are all fair game. In a single afternoon, you can hear a high speed police chase, Drug Enforcement agents on a sting operation, and undercover FBI agents as they stakeout a suspect.

How about listening to a presidential candidate discuss strategy with his advisor from a 415 MHz radiophone in Air Force 1, or a team of G-men protect him while transmitting in the 167 MHz range?

Baby monitor intercoms are actually transmitters and you can hear them between 49.67 and 49.99 MHz.

Stay ahead of road conditions by listening to highway road crews, snow plows, and traffic helicopter pilots. Many midwesterners monitor the state police and and county sheriff to learn of approaching tornados long before warnings are broadcast on TV and commercial radio. Take your scanner to sporting events and listen to race car drivers, football coaches, etc., in the 151, 154, and 468 MHz ranges.

Monitor the everyday hustle and bustle of businesses, from cable TV repair crews tracking down pirate descrambler boxes, to security guards at your nuclear power plant or mall security guards chasing a shoplifter.

Is Scanning Legal?

In the United States, scanning from your home or at work is perfectly legal in most situations. The Electronic Communications Privacy Act of 1986 made it illegal to listen to mobile phones, common carrier paging, and a few other types of communication. Public law 103-414, signed Oct. 25, 1994, amended the law (Title 18 USC, Part I, chapter 119, sections 25110 and 2511) and outlaws listening to cordless phones, too, but many scanners cover these | frequencies.

It is illegal for companies to sell or import into the USA recently manufactured scanners which cover or can be easily modified to cover the cellular phone frequencies, but sales by private individuals will still be allowed.

The rules define "readily altered by the user" as "clipping the leads of, or installing, a simple component such as a diode, resistor and/or jumper wire; replacing a plug-in semiconductor chip; or programming a semiconductor chip

using special access codes or an external device, such as a personal computer."

Speaking of privacy, federal law also requires you to keep what you hear to yourself and not use the information you hear on your scanner for personal gain.

Be aware that several states have laws pertaining to scanning while in your car. Indiana restricts some portable scanners. A few states have enacted their own laws against listening to cordless phones. You can find out about these restrictions in a paperback book, Listeners Lawbook, compiled by Frank Terranella, Esq. available for $9.95 + shipping from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902.

What Scanner Should I Buy?

Radio Shack and Uniden (maker of Bearcat, Regency, and Cobra brands) offer a wide choice of scanners. Radio Shack scanners are actually manufactured by both GRE (General Research Electronics) and by Uniden. Personally, I don't recommend Trident nor many of the AOR brand scanners, although the AR8000 and AR3000 have good reputations and the AR5000 works well.

Programmable (synthesized) units have replaced crystal controlled models as they don't require crystals and usually have a keypad that permits you to store frequencies into channels. Programmables are now so cheap it doesn't make sense to buy a crystal unit as your main scanner unless you get it for under $45 or so.

You can get a battery operated hand held scanner, a bigger "base" scanner which is powered from an AC outlet, or a mobile scanner which connects to your auto's electrical system. There are tradeoffs -- base and mobile scanners have larger displays and almost always provide more audio than portables, and some portables are more prone to interference when connected to outdoor antennas than base models. But when severe weather knocks out the power in your home, there's nothing like having a battery operated scanner to monitor the power utility and police frequencies!

Make sure your first scanner has a "search" feature, which allows it to search all the frequencies between two frequency limits of your choosing. Beware of low cost programmables which can't search. Some of the newer models, like the Uniden SportCat and Radio Shack PRO-2046, allow searching between limits, but the limits are factory programmed and cannot be altered.

Get a model which covers the 800 MHz band. Usage of the 800 - 950 MHz band is growing fast and you will miss out on the action unless your scanner covers this band.

If you're not sure whether you'll like scanning, don't want to spend much money, a 50 channel scanner will do. In general, the more channels and banks, the better.

Most of the action takes place on frequencies between 30 and 1000 MHz, so don't be misled by scanner models boasting coverage from 3 to 2000 MHz. There's currently not much to monitor in the 1000 - 2000 MHz range.

If you are interested in receiving short wave, that is, signals in the 3 - 30 MHz range, it's best to get a short wave radio specifically designed for that purpose. Although some scanners receive the short wave band, their performance in that range is often second rate. The $2000 Icom R8500 and AOR AR5000 models are exceptions.

Deluxe scanners can be controlled and/or downloaded by a personal computer, a feature which appeals to a small but growing number of scanner owners.

Almost all low and mid-priced scanners are prone to receiving images -- receiving the same signal erroneously on two or more frequencies. With a few exceptions, images are unwelcome due to the interference they cause, e.g., hearing aircraft transmissions while the scanner is tuned to the local police frequency. Premium quality scanners use "up conversion" circuitry, a scheme which greatly reduces, but does not eliminate, image reception.

Currently, the more popular scanners include the discontinued Radio Shack PRO-2006 base/mobiles, the Uniden/Bearcat BC200XLT (a/k/a BC205XLT), BC220XLT, BC230XLT, and Radio Shack PRO-43 and PRO-60 portables. A number of owners report problems with the Icom R1 portable and the older Uniden/Bearcat 8500XLT base and 2500XLT portable. The Uniden BC9000XLT base and BC3000XLT portable work very well and are my current favorites.

Looking for value? At $180 discount price, the 100 channel Uniden/Bearcat BC860XLT base is a good value and available at most Wal-Mart stores. The RELM HS200 portable performs | very well is an excellent value at its $250 street price.

Considered by many as the best scanner ever made, the 400 channel Radio Shack PRO-2006 was replaced by the 1000 channel PRO-2035, which was replaced by the PRO-2042. The portable Radio Shack PRO-64 and PRO-60 are good performers. All five models employ up conversion and are made for Radio Shack by GRE (General Research Electronics).

CTCSS and DCS Tone Squelch Feature

Upscale scanners can be optioned with a subaudible tone decoding squelch circuit. There are two types: CTCSS (Continuous Tone Coded Squelch System) and DCS (Digital Coded Squelch). In simple terms, this feature lets your scanner ignore signals you don't want to hear.

Most land mobile two way radios, except trunked systems, transmit either CTCSS or DCS signals subaudibly along with the voice information. U.S. military field radios employ wider deviation and a 150 Hz CTCSS tone, not supported by most scanners or CTCSS decoders.

There are over 40 different CTCSS codes and you can program a specific CTCSS or DCS code into each memory channel. Using a CTCSS or DCS decoder permits your scanner to open the squelch only if the transmission has a code which matches the code you program.

CTCSS and DCS decoding offers several advantages:

1. Ignore unwanted signals on shared frequencies: It is common for several users to share the same frequency, e.g., my county sheriff uses the same frequency as Chicago Police, located about 60 miles away. I want to hear my sheriff's transmissions but don't want the scanner to stop on or listen to Chicago Police transmissions. This is especially a problem when radio propagation is good, e.g., during a "band opening," when reception range is temporarily increased.

2. Combat intermodulation interference: Helps keep out intermod and image interference from strong pagers and other signals which are not transmitted with a matching code.

3. Ignore scrambled transmissions: Many federal law enforcement agencies (FBI, Secret Service, etc) and some local police agencies employ digital voice scrambling, which sounds like white noise and is annoying to hear. The CTCSS or DCS code is sent only when the station is transmitting unscrambled, or "in the clear." You can program federal frequencies along with the proper code into your decoder-equipped scanner so you won't have to listen to the scrambled mess and only hear their transmissions when they are unscrambled.

CTCSS also goes by various tradenames: Motorola's PL (Private Line), GE's Channel Guard, and RCA's Quiet Channel. Motorola uses the tradename DPL (Digital Private Line) for its digital coded squelch.

How Do I Determine the Proper CTCSS or DCS Code?

There are a few ways to determine the CTCSS or DCS code transmitted by a station:

1. Use an outboard CTCSS/DCS reader which must be attached to the discriminator output circuitry inside the scanner. The reader has an LCD or LED display which indicates the code when a station transmits. I use a CSI model CD-1 Communications Decoder Unit, an an excellent reader which sells new for about $200. (Connect Systems Inc., Ventura, CA, 800-545-1349, www.connectsystems.com).
2. Many of the ScannerMaster guides, as well as scanner club newsletters, print the CTCSS codes used by transmitting stations.
3. On some scanners equipped with the CTCSS squelch, you can program into memory the frequency of interest. Then you "tune" slowly through all the different CTCSS and/or DCS codes until the squelch opens and you hear the dispatcher talking. This is a slow process and the station has to keep transmitting during it.
4. A slow, brute force method is to program the same frequency but a different CTCSS code into several channels and see where your scanner stops.
5. In some cases, I've actually examined the walkie-talkies I want to monitor and found the CTCSS code printed on a label on or inside the radio.

Scanner Antennas

All scanners come with a built in antenna, permitting reception up to about 20 miles or so.

Portable scanners are supplied with a helical (spring shaped) antenna, covered by rubber. The rubberized antennas furnished with current models are too stiff and place stress on the antenna jack. Older scanners to be supplied with more flexible antennas. I prefer these alternative antennas for use with portable scanners:

1. The Icom FA-1433B dual band flex antenna, a thin and very flexible rubber antenna, is slightly longer than a stock heliflex but provides better performance.
2. The Austin Condor is a 12" long rubberized antenna available for about $30. While considerably longer than the stock antenna and the FA-1443B, the Condor is very flexible and provides VHF-high band reception superior to both. It is not designed to cover the VHF-low band, but will allow reception there at least as good as shorter antennas.
3. The "Thin-Stick" is an 18 inch telescoping antenna for extended range. It is made in USA by Smiley Antenna

Co., Inc. and is designed to cover both the 2 meter and 220 MHz bands, but its variable length means it can be adjusted for optimum performance on other bands. What makes the Thin-Stick different from an ordinary telescoping antenna is the spring between the antenna and the connector portions. The spring absorbs most of the impact if the antenna collides with an object. The street price is about $17 and it is available from Amateur Electronic Supply, Milwaukee and other retailers.

Outdoor antennas, like the Channel Master 5094A or Antenna Specialists AV-801 (recently discontinued), can extend reliable reception to 50 miles or more, depending on terrain. If you do use an outdoor antenna, be sure to disconnect and ground it during storms and when not in use to avoid a lightning hazard. Discone and ground plane type antennas can be more prone to cause scanner damage due to static charge buildup because they are not at "DC ground."

Coaxial Cable Feedlines

If your antenna installation requires more than 50 feet of feedline, use RG213/U or high quality RG8/U coaxial cable. RG213/U, e.g., Belden type 8267, has a non-contaminating jacket and will last longer. Each has an outer diameter of about 13/32". Similarly sized Belden 9913 cable and clones have lower attenuation but are difficult to bend, require special connectors, and can accumulate moisture inside because they are hollow.

If you must use a small diameter cable for long runs, use RG6/U. Avoid RG58/U (7/32" OD) due to its losses at high frequencies. RG8/X (1/4" OD) is suitable for short patch cords.

Where Can I Buy A Scanner?

Almost every community has at least one Radio Shack store, and you can find scanners there. Be sure it is on sale, as Radio Shack list prices are high and their scanners are offered at reduced prices by mail order discounters.

Discount chain stores like Wal-Mart, Best Buy, K-Mart, Service Merchandise, and Circuit City sell scanners, but carry just a few models. Department stores, like Sears Roebuck and Montgomery Wards, sometimes offer low end scanners, although at high prices.

The best buys on new scanners are from reputable mail order radio dealers, for example:

- Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902. For a free catalog, call (704)837-9200. Telephone (orders only): (800)438-8155. Web page is http://www.grove.net

- National Electronics (formerly National Tower Company), PO Box 15417, Shawnee Mission, KS 66215. Telephone (800)762-5049, (913)888-8864. Web page is www.sound.net/~ne/

- The Ham Station, 220 N. Fulton Ave., Evansville, IN 47719-0522. Telephone (800)729-4373, (812)422-0231.

- Scanner World (Albany, NY). Telephone (518)436-9606.

- Amateur Electronics Supply (Milwaukee, WI). Telephone (800)558-0411. Web page is www.aesham.com

Beware of inflated "shipping and handling" charges and be sure to include these when comparison shopping.

Used scanners may be found at hamfests, flea markets, garage sales, or listed in the classified advertisement section of your newspaper.

Modifying Your Scanner

The term "mod" is often used as shorthand for "modification." If you are handy with a soldering iron, you may be interested in modifying ("modding") your scanner to add features or enhance its performance. Be warned this usually voids your warranty and current models are difficult to service due to the small, delicate surface mount components. By federal regulation, new scanner models cannot be easily modified to tune the cellular phone bands.

The term "mod" has been narrowly used by some people to mean a change which permits a scanner to receive cellular phone frequencies. This definition is far too restrictive as there are several ways one could modify a scanner, e.g., changes to improve audio quality, adding an S-meter, expanding the number of channels, changing the earphone jack to accept stereo headphones, etc.

Modification article files can be copied from several ftp sites including the /pub/ham-radio/mods directory at:

garfield.catt.ncsu.edu
oak.oakland.edu (IP address 141.210.10.117)

Modification articles posted on Usenet seem to have a life of their own. Frequently, they are plagiarized from the Internet and compiled by book, CDROM, and magazine publishers, sometimes reworded, then sold. Hobbyists then

copy the modifications from the books, CDROMs, and magazines back onto the Internet or BBSs (bulletin board systems)!

Grove Enterprises and other companies advertise a warranted, modification for fee service.

For information on "virtual downconverter" modifications, see Steve Donnell's article in January 1995 RCMA Scanner Journal or February 1996 Monitoring Times. Reprints of articles from Monitoring Times are available for $3.00 each plus a self-addressed stamped envelope from:

Grove Enterprises,
7540 Highway 64 West,
Brasstown,
NC 28902. For a free catalog, call (704)837-9200.
Telephone (orders only): (800)438-8155.

I don't get any part of this reprint fee.

Scanner Repair Shops

Is your scanner broken? Aside from sending the scanner back to the manufacturer for repair, here is one company which repairs scanners:

- G & G Communications (telephone 716-768-8151) - (www.iinc.com/ggcomm or email ggcomm@iinc.com or ggcomm@aol.com) This family owned company repairs scanners and pagers and stocks parts for several older models. G & G cannot usually repair AOR scanners due to lack of manufacturer support. G & G sells and sometimes buys old scanners and parts, too. They are located at 9247 Glenwood Drive, LeRoy, NY 14482.

Repair tips for Bearcat and Radio Shack scanners are discussed in two other FAQ articles.

Where Can I Obtain Frequency Information?

To avoid chaos, the FCC licenses two-way radio users and assigns them specific frequencies. Groups of frequencies are allocated to specific types of users, so you won't usually find fire departments using the same frequencies as taxi drivers, for example.

Scanner enthusiasts can obtain frequency information from several sources, including books, government microfiche records, or other listeners.

Books: The most convenient source of fire, police, and local government frequencies is Gene Hughes' Police Call Plus, published each year in 9 regional volumes by Hollins

Radio Data, and sold at Radio Shack and larger book stores. | The newest editions contain abbreviated business listings, | too, although callsigns and other details are listed only for local government and public safety licensees.

I also recommend the book, Monitor America, published by SMB Publishing (now known as Scanner Master Publishing), and available from Grove Enterprises for about $30. A 1100 page 3rd edition is now available. Monitor America contains several pages of police, fire, local government, news media, sports, federal government, and commercial broadcast frequencies for all 50 states. It contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Uniden has published several regional directories using the "Betty Bearcat" name, although there are much better directories available from Scanner Master (Newton Highlands, MA, tel. (508)655-6300) for some regions.

The most readily available source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Commercial Magazines: Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times (tel. 704-837-9200, www.grove.net) and the sensationalistic Popular Communications, (tel. 516-681-2922). National Scanning (NatScan) is a national scanner magazine published bimonthly and is affiliated with Uniden's Bearcat Radio Club. Early issues disappointed experienced scanner hobbyists, but it now has a good column on scanner modifications and has greatly improved its coverage of east coast frequencies since merging with NESN (North East Scanner News). The best scanner frequency

lists are often found in club publications, not commercial magazines, and are discussed later.

The Scanner Club is the name of a bimonthly magazine published by Les Mattson. It is a successor to the Northeast Scanning News and is the official publication of The Scanner Club, a not-for-profit club organization. TSC's main strength is local frequency information, including CTCSS codes. Sample issues are $4 each. A yearly membership costs $24.95 and includes 6 issues. Write to The Scanner Club, PO Box 62, Gibbstown, NJ 08027 for more information.

Government Records: Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS). The high cost of buying government records limits their appeal to hardcore enthusiasts. You can write for a catalog of FCC Master Frequency Database items to the NTIS, 5285 Port Royal Road, Springfield, VA 22161.

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100. The PerCon Spectrum CDROM sells for $29 and contains a handful of fields for every FCC license in the US. The Spring 1995 edition works in DOS, Windows, and Mac environments.

Grove enterprises sells FCC license information on CDROM for $100. In the 1995 edition, fields are different than PerCon's Spectrum CDROM but the data appears to be of the same vintage. The licensee name and licensee city are used instead of the DBA (doing business as) name and transmitter city which makes query results confusing.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

RadioMap has been advertised monthly in Monitoring Times | magazine since 1995. The graphical nature of RadioMap allows you to identify antenna sites and visualize the

transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Do Your Own Frequency Detective Work

When you try listening to a frequency for the first time, you'll want to know who you're hearing.

Although FCC rules require radio systems to identify their operations with their assigned call letters either automatically or verbally, most ignore the regulation.

This often makes it difficult to know who is transmitting. Moreover, many radios are now being placed in service illegally, without first obtaining the required FCC license.

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and try to determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

You can examine the FCC license on premise. I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the mall security office or company guard shack. You can examine the labels on radio equipment. Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret. Hobbyists are urged to exercise a modicum of restraint and good judgement, however.

How Can I Use Equipment
to Uncover New Frequencies?

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. A few models, like the ICOM R7000/R7100, and R1, and older Bearcat 250 and Regency K500, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy, a Radio Shack CTR-82 will do. It's best to use a shielded, attenuating cable to feed the scanner audio into the recorder rather than relying on the recorder's internal microphone.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, and a frequency counter for close-in work.

Are There Any Scanner Clubs or Mailing List?

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than any pile of magazines.

Peter Laws administers an electronic mail list read by over 700 hobbyists devoted to scanners and scanning. It's called "scan-l" and for more information, read:

http://www.wildstar.net/~plaws/scan/scan-l.txt

Clay Irving <clay@panix.com> administers a scanner electronic mailing list, called "scanning." To subscribe, send an Email message to: majordomo@lists.panix.com

In the body of the Email message, put: subscribe scanning

All Ohio Scanner Club

A smaller club is the All Ohio Scanner Club. Its bimonthly publication, The American Scannergram, is about 60 pages

long. Although concentrating on Ohio and the Northeastern states, there is frequency information from other states, and plenty of good product reviews and scanning tips.

Annual dues are $18.50 and more information is available from:

Dave Marshall, Managing Editor
All Ohio Scanner Club,
50 Villa Road,
Springfield, OH 45503.

Chicago Area Radio Monitoring Association

The Chicago Area Radio Monitoring Association (CARMA) is the foremost club for scanner radio hobbyists in the northern Illinois area. CARMA was formed from the Chicago chapter of the Radio Communications Monitoring Association (RCMA), and we have been meeting since the early 1980s.

Many CARMA members are active in ham radio and GMRS, but the club is devoted to scanning and scanners.

Meetings are held on Saturdays, many at area restaurants, about 6 times a year. Although lunch starts at noon, the meetings begin officially at 1 PM and often run until about 4 PM. You must purchase a lunch since we get the room for free. Meetings consist of a quick review of club business, sometimes a special presentation, and a "round table" discussion/question & answer session. Large quantities of information and frequency lists are often distributed in the form of free handouts. Members often sell radio equipment at the meetings, too.

In addition to regular meetings, there are two CARMA picnic/field days during which members meet at a park, erect antennas, eat, and operate scanners from battery power. CARMA members take organized tours of various communications facilities in the area.

Club meeting dates and times are published in the CARMA newsletter, published 6 times a year. You can obtain an electronic subscription to the CARMA Newsletter. For more info, see:

http://www.TheRamp.net/shabec/carma.htm

The club's mailing address is:

CARMA
P.O. Box 2681
Glenview, IL 60025

Some CARMA members participate on the CARMA computer bulletin board, run by Will Sperling. There is a $15 annual fee for the BBS. If you have a modem and terminal or computer, you can reach the CARMA BBS by calling (630)852-1292.

All meetings are held on Saturdays at locations announced in advance. Meetings are usually held at:

- the Destiny Restaurant, on Rand Road, in Des Plaines,

- Philly's in the shopping center at the corner Rt. 83 and 53rd St. in Willowbrook,

- The Great Escape, on Irving Park Road, Schiller Park

and at other restaurants.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Minimum Volume Setting

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and

feature priority scan and a separate trimmer capacitor for
each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197	47K try 220K.
Radio Shack PRO-2004	R148	47K remove R148 or replace with 220K.

	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)
Radio Shack PRO-2022	R91 33K replace 33K
	with 220K.
	Between pins 12 & 14

Yes, but keep in mind that we have more than a handful of democrats
who changed parties. They stuck their fingers in the air and said "I
better go over here if Im going to keep my job!"
They still vote like democrats on important issues.

Hi there,

I saw some great undocumented features and tricks for the BC3000XLT,
such as:
[2,9 & manual] Zeroes out and locks out all memory channels!
[2,9 & keylock] Displays firmware version.
[Sft & 5] Toggles battery save on/off
etc. etc. etc.....
You can see the BC3000 features on:

http://www.universe.digex.net/~bnr/tricks.html

** I'm trying to find the undocumented features and tricks for the
(U)BC9000XLT. **

Please Email it to me or tell me on what site I can find them.
It would be greatly appreciated.

Greetz from Jan.

Nov 16,1997

Hello,

Can anyone tell me what was the last Radio Shack pocket scanner to have
full cellular coverage? Thanks. J W

I was in radio shack yesterday window shopping their scanner radio
stock...the salesman informed me due to the bill that was passed in
congress in regards to public safety monitoring, that tandy company
would be out of the scanner radio bussines after the first of the year!
I wonder if he could be correct!
Have you heard anything about this?

When they beep, yack, game and ragchew When they (in at least one case)
continually state that what happen in the past is irrelevant and then
geezer on about their dreary military career in some backwater area of
postwar Korea. When they insist that others are too cheap to buy the
type of equipment that they themselves "BORROW" from their employers to
"use" at home for work related projects. And finally, when they profess
to know more than anybody based on THEIR longevity in a hobby/service

Just a musing from......

4173. A WARNING: YOUR SCANNER MAY BECOME ILLEGAL SOON!

Newsgroup: rec.radio.scanner
Date: 1997-11-16 00:00:00 UTC
From: D avid <david084@flash.net>
Message-ID: <346F4228.3B85@flash.net>
Source record: 180233
Cross-posted to: alt.radio.scanner,alt.radio.amateur.misc,rec.boats.electronics,rec.radio.scanner

HR2369 MAY OUTLAW THE OWNERSHIP OF SCANNERS THAT YOU OWN NOW!

DO NOT THINK THAT BECAUSE THIS BILL HAS BEEN MODIFIED, YOU WILL NOT BE

GREATLY AFFECTED! MANY MANY FREQUENCIES WILL BE REMOVED FROM FUTUERE

SCANNERS, AND YOUR PRESENT SCANNER MAYBE OUTLAWED!

THAT WOULD MAKE YOU A CRIMINAL IF YOU KEEP THE SCANNER YOU NOW OWN!

WE MUST FIGHT THIS BILL MUCH HARDER! CONGRESSMAN TAUZIN OF CALIFORNIA

HAS RELAXED SOME OF THE BILL'S RESTRICTIONS, HOWEVER, HE MAY HAVE

DONE THAT SO THAT HAMS AND THOSE INVOLVED IN THE SCANNER HOBBY WILL

SHUT UP AND ALLOW THE BILL TO PASS!

Are you going to shut up for Congressman Tauzin so he can get his bill passed and keep getting those big bucks from the cellular industry for his reelection????

If you will only contact your three members of Congress, you may save the hobby we all so enjoy. Do you know your zip code? IF so, then click on the page below. When the page comes up, you will be able to find your representatives names, phone numbers etc. simply by plugging in your zip code!!! HOW MUCH EASIER CAN YOU HAVE IT?

Bottom Line: The Feds hate your scanner. Far more Democrats are involved in this attempt to ban many many frequencies from being recieved. Untill pressure was applied, Tauzin who is a Democrat who changed parties and now calls himself a Republican, though few believe him, was trying to pass this bill in its origianal form which would have totally killed the scanner hobby!
Now, the bill has been adjusted, however, your present scanner may become illegal, and all new scanners will have zillions of frequencies removed from them! DO YOU WANT THIS TO HAPPEN?
In 1986, the Electronic Communications Privacy Act was passed. It cut out a large amount of frequencies from scanners. HR2369 will cut many more. And, just as with the attempts by Democrats to remove guns from America, gradualism is being used here to take away more and more frequencies from scanners. Why you ask? Because government always seeks to govern more! Replace the word govern with the word control and you will begin to understand why you face a continual war being waged against your freedoms by the very people you elected into office!

ITS TIME TO RAISE HELL WITH CONGRESS! As I mentined earlier, more democrats are sponsoring this bill than are Republicans. Tauzin is a turncoat, untrustable Democrat who claims to be a Republican.
Lets get to work and put this billout of existance!

Put your Congressmen on notice! : http://congress.org/search.html

REPEATEDLY call the nine sponsors of this bill:

1. Markey (D-MA) DC-202-225-2836, or 508-875-2900

2. Eshoo (D-CA) DC-202-225-8104, or 408-245-2339

3. K. McCarthy (D-MO) DC-202-225-5516, or 516-489-7066

4. Manton (D-NY) DC-202-225-3965, or 718-931-1400

5. WYNN (D-MD) DC-202-225-8699, or 301-588-7328

6. C.Peterson (D-MN) DC-202-225-2165, or 218-847-5056

7. Oxly (R-OH) DC-202-225-2676, or 419-999-6455

8. Gillmor (R-OH) DC-202-225-6405, or 419-872-2500

9. Deal (R-GA) DC-202-225-5211, or 770-535-2592

10 TAUZIN!!! (R-CA) DC-202-225-4031, or 504-876-3033
Tauzin, How much money are you getting from the cellular industry for pushing this bill???? Its almost reelection time and he needs MONEY!!!

(ALWAYS FOLLOW THE MONEY!!! and youll understand your elected official!)

Below is a list of the frequencies that may be affected and removed from future scanners. See if you think Tauzin is trying to kill off your hobby.

Let's take a look at that list of frequencies to be cut:

30.76-31.24, 33.14-33.16, 33.40, 35.02-35.14, 35.18, 35.20-35.66, 35.7-35.72,
35.88-35.98, 42.96-43.00, 43.20-43.66, 137-138, 148-150.050, 151.625-151.955,
152.030-152.240, 152.480-152.840, 154.570-154.600, 154.625, 157.200-157.400,
157.740-158.100, 158.460-159.700, 161.800-162.000, 216-222, 399.900-400.050,
4540-455, 457.525-457.600, 459-460, 460.650-462.1875, 462.750-462.925,
463.200-465, 465.650-467.1875, 467.750-467.925, 468.200-470 (and similar chunks of
the 470-512 MHz band), 806-821, 824-866, 869-902, 929-932, 940
941,1525-1559,1610-1660.5, and 1850-1990 MHz.

That's over 363 megahertz-- nearly 20% of the entire VHF/UHF scanner spectrum from
30-2000 MHz! Pretty scary. And that's just the beginning.

Several trunked web pages are showing a 25 frequency trunked city assigned to The State of Minnesota. Does anyone have any information on this system? I am in the Minneapolis area and find no activity on it. Future plans? Other parts of the state?

Also interested in communicating with others who monitor trunked radio systems in Minnesota.

Thanks very much!

I have 3 minitor I monitors on VHF low, one pager has a bad volume control.
Two of the pagers look like new, the other one shows significant wear.
I have 5 drop in chargers, 3 of which have the antenna connection's.
Chargers are discolored somewhat as they look like the were in a smokers
environment.All the chargers work.
Would like to trade for one minitor II on VHF low with a drop-in charger.
Regards,
Jody

>The only gripe I have with my BC235XLT is the 180 miliwatts of audio that it has and was wondering if anyone knows of any way to increase the volume.

That may be difficult, but you could use a decent external speaker. You will be amazed at the difference. I know you wanted an INTERNAL fix, but if you don't get one, try the speaker idea. Of course, you could go with an amplifier speaker, but that may be overkill. A Motorola speaker works great for me. By the way, anyone have some of these lying around? Cheap?

Please post any good ideas that you may receive for all to benefit!

Dear radio hobby club volunteer:

FBOM Magazine Online, the interactive version of FBOM Magazine, is offering to post information about your non-profit radio club's hamfests, jamborees and other large radio hobby-related events free of charge on our web site (http://n-lemma.com/FBOM/).

The only strings attatched are that your club is a non-profit organization and you can use some extra publicity.

These listings will be continously updated. As an added incentive for others to rely on the listings, we will contact you 2 weeks prior to your event and put a "Confirmed or not confirmed by FBOM" stamp on the listing.

Please send us information about your club's fundraising events as soon as possible. You can also use a form on the our web site. Simply click any references to "Hamfest listings."

For any questions, email the Publisher, Eric Bond, N9VJG (n9vjg@n-lemma.com) or the Webitor, Chuck Brown, N9UPO (n9upo@n-lemma.com).

Feel free to spread the word to other radio hobby-related clubs and organizations--especially those who do not have internet access.

Thank you and 73s

Eric Bond, N9VJG W.C./NCI-1099
Janitor and Publisher

When severe weather strikes, I tune my scanner to 154.220, my local
fire department and police emergency channel for the latest on the
approaching storm. I have developed a weather page for use alongside
my scanner: It has everything I want to find out from the Net!

Presenting The Dawley Homepage Weather Website!

http://www.geocities.com/ResearchTriangle/Lab/4419/

Featuring an Easy-to-Use Push-Button format designed for
high-speed use, you can obtain valuable weather
information and maps you need during this El Nino year!

Here's a sample: Go to my Today's Weather Observations page
at::
http://www.geocities.com/ResearchTriangle/Lab/4419/geo9.html
You'll be able to obtain reports on the past few hours weather in
any State in the USA, and move from State to State in seconds!
Normally, these reports appear about 4 seconds after you click on
the button! Then you can go back and get another one!

You won't have to look all over the Net to find weather that
applies to your area. The Dawley Homepage Weather Website
has one purpose in mind: To deliver your weather to you as
quickly as possible, in an easy-to-use Push-Button format.

You'll find the latest from the National Weather Service, arranged
so you can find the weather that applies to you!

Improvements are always being incorporated into
The Dawley Homepage Weather Website, so check back often.

Visit us today!
http://www.geocities.com/ResearchTriangle/Lab/4419/

Hi all,
I just picked up a used Realistic PRO-2021 200 channel scanner for about $60.00, there was no manual included and I'm having trouble programming it. I have tried pressing the <manual> button, (to get it to stop searching), and the <program> button. It will go into program mode but then won't allow me to enter in any frequencies. Does anyone have any ideas? If so please reply to this message or email me at cyberbiker@juno.com. In the headding please put PRO-2021 that way i don't accidentily erase it! :-)

Thanks!
Steve-O

4194. Kenwood FreeTalks for Christmas Sale

Looking for freqs. for that scanner? Point your browser to:

WWW.PERCONCORP.COM/DB_SRCH.HTM

What you will find is access to a database that asks for your location
and what ya wanna look for (what service) and itll give you a number of
frequencies for that service in your area. Give it a try it works great
for me. They also sell this database on CDROM

:
: I have to agree. Bellows doesn't seem to own a scanner that's triple
:conversion. I pick up cell on a TrunkTracker (triple conversion) but
:from what I can tell it's only because I'm very close to a cell tower.
:Take the scanner a mile down the road and no more cell

:reception....anywhere in the 800-900 Mhz area at all. So don't believe
:the jibberish that ALL scanners can pick up cell images.
:--
: Regards,
: Dean

I have a Yaesu FT-50RD and a Yaesu FT-3000M. Both have wide band receivers with scanning, and both have cell bands blocked. I can listen to cell phones on the FT-50 via images in the 900Mhz region. I have not found any way to listen to cell calls on the FT-3000 and I think I know why. It seems that, on that particular radio, the cell images fall just outside its frequency range. I wonder if Yaesu did that deliberatly.

Barry

It isn't libelous (or "defamatory", as it is known in many states) if it is NOT true. So, the aggrieved party can choose to put their personal life at issue if they wish. Moreover, assuming it isn't true the defendants could raise the "politically correct" defense that since this is just an "alternative lifestyle choice", there should be no harm from the mistake and, accordingly, no damages.

Build an inverter. Its not too tough. The Walkie-Talkie trick really
stinks :)

Schematics can be found in Rudolf F. Gtaf & William Sheets "Encyclopedia
of Electronic Circuits VOLUME 4" Page 26.

If you want to dig through your old copys of Popular Electronics,
you can also find one in the July of 91 issue on pages 70 and 71...

Enjoy :)

Go to a communications shop and ask for a MaxRad 800mhz antenna. They make these in the 5db gain. It will have two "swirls" in it. Kind of a long cellular antenna. They can put a BNC end on it for you.

Cost should be about $35.00. But well worth it. My cellular phone and 800 mhz radios work much better with the 5db rather than the 3db.

Of Course, my 3 watt cellular bag phone at home is connected to a 12db directional antenna mounted outside. It sound really clear.

Take Care!

Source record: 180327

The only gripe I have with my BC235XLT is the 180 miliwatts of audio that it has
and was wondering if anyone knows of any way to increase the volume. I bought
a Radio Shack PRO-66 for my wife that has 500 miliwatts of audio and have a hard
time believing that cheap thing out performs BC235XLT's audio. There has to be
some internal part that can be modified or replaced to increase the volume as it
is hard to hear if there is any noise in the background such as traffic when I am
outside or the TV when I am inside.

You may interpret the first ammendment as political only but some of us do not. As a matter of fact, I would venture to guess that most people consider this ammendment a protection of one's right to their own opinion. If a person doesn't have the freedom of his own thoughts an opinions then we are obviously progressing towards a communist regime. I think we are already being governed by "New World Socialism".

I recently bought a Sanyo CLT-927. It's fantastic. Much better then
the Tropez it replaced, and has better range, too. It has battery
backup in the base set so you don't lose memories and can talk during
power outages. I purchased it from ONSALE.COM, a reconditioned model
for about half price.

Sanyo makes several other models, too.

The Radio Shack PRO-2035 Scanner:
How Does It Compare With the PRO-2006?

Copyright 1994 by Bob Parnass, AJ9S

[NOTES: An earlier version of this article was published
in the author's Scanner Equipment column, Monitoring Times
magazine, January 1995. This article may not be reproduced
in whole or in part on CDROMS, in bulletin boards,
networks, or publications which charge for service without
permission of the author.]

Radio Shack recently discontinued the PRO-2006,
perhaps the best base/mobile scanner radio ever sold, and
replaced it with the 1000 channel PRO-2035. Bob Grove
reviewed the PRO-2035 in October 1994 Monitoring Times
magazine. How does it stack up against the PRO-2006? Read
on.

Background

In 1986, Radio Shack introduced the PRO-2004 wide
band programmable scanner and it immediately captured the
attention of hobbyists. The PRO-2004 was made by General
Research Electronics and was different from other models of
that era due to its large 300 channel capacity and nearly
continuous frequency coverage of 25 to 1300 MHz. Key to
the PRO-2004's superior performance over such a wide
frequency range was the use of "up conversion," a design
found in expensive commercial and military receivers.
The PRO-2004 was replaced by the PRO-2005 in 1989,
which was upgraded to the PRO-2006 one year later. The
PRO-2005 and PRO-2006 were manufactured using tiny surface
mount components, and despite a different cabinet, display
panel, and keypad, the PRO-2004 and PRO-2006 circuitry and
features were very similar. The PRO-2006 scanned and
searched faster and was more sensitive. Except for the use

of a plastic case, the PRO-2006 was equal to, or better than the PRO-2004.
By 1993, the highly prized PRO-2006 was getting long in tooth. Uniden introduced the Bearcat 8500xlt, the first Bearcat scanner featuring up conversion and a tuning knob. Radio Shack's somewhat late response to the 8500xlt is the new PRO-2035.
The PRO-2035 analyzed in this review was purchased from a local Radio Shack store and bears a serial number near 3000.

Physical

The PRO-2035 is about 5/8" wider and 1/2" taller than the PRO-2006. Extra room in the spacious cabinet will interest experimenters and companies who may provide aftermarket accessories for the PRO-2035.
The dark plastic case has rounded corners, typical of contemporary "European" stying. The squelch and volume knobs are the same dark color as the front panel, and you can't see where they are set as Radio Shack opted not to paint the hairline marker grooves a contrasting color. You can paint a white groove in each knob using a small bottle of White Out correction fluid, a product intended for covering typing mistakes.
Although there is a jack for running the PRO-2035 from a 12 VDC source, Radio Shack refers to this model as a "home scanner."

Frequency Coverage

There is a typographical error on page 3 of the owner's manual which specifies that the PR0-2035 tunes the 470 - 805.750 MHz range. Coverage in this band actually stops at 520 MHz and resumes at 760 MHz. Despite the limits cited in the manual, the PRO-2035 tested for this article tuned 25 - 520, 760 - 823.995, 849.005 - 868.995, and 894.005 - 1300 MHz.
Lately, the most frequently posed scanner question on the Internet and computer bulletin boards is, "How can I modify my scanner to cover the cellular phone range?" The FCC no longer permits companies to sell scanners which cover the 800 MHz cellular phone frequencies or which can be easily modified to cover them. As sold in the USA, the PRO-2035 does not tune the cellular frequencies directly. This raises an interesting question for a product reviewer or scanner experimenter: If he or she finds an easy way to expand frequency coverage into the cellular phone band, should the information be published? Doing so could lead to a product recall.

Memory Features

The PRO-2006 has 400 conventional memory channels and 10 Monitor channels backed up by an ordinary 9 volt battery. The PRO-2035 has 1000 conventional memory channels and 100 Monitor channels backed up by a special 3 volt battery soldered onto the main circuit board. The owner's manual states memory contents will be retained for up to 3 months in the event of a power interruption.
Both the PRO-2006 and PRO-2035 have 10 pairs of search limits, but the PRO-2006 permitted searching only one range at a time. The PRO-2035 is more flexible and allows "linking" search ranges together sequentially. You can set search range #1 limits to 46.61 - 46.97 MHz and search range #2 to 49.61 - 49.97 MHz, for example, and the PRO-2035 will alternate searching both ranges.
Here's a tip: If your favorite search range has one or two birdies, or frequencies you want to skip, you can break the range up into two or more sequential ranges and link them together.
Not only are there a lot more channels in the PRO-2035, but several new ways to manipulate them. By pressing a few keys, you can:

1) zero all 100 memories in any single bank

2) zero all 1000 memories in all banks

3) zero all the locked out memories in any bank

4) display the number of "empty" channels in any bank. The PRO-2035 owner's manual refers to memories which contain 0.0000 as "empty" memories.

5) move all the nonempty channels in a bank downwards to fill in the empty channels in the bank

6) transfer multiple Monitor channels into one or more banks

7) transfer all the channels in any bank into the Monitor channels

With so many channels, the PRO-2035 needs another feature, but it's missing: it should skip over empty channels automatically. Although the PRO-2035 scans twice as fast as the PRO-2006, it still wastes time scanning empty channels unless they are locked out. The bulk move operations listed above clear the lockout on each destination channel. Owners will certainly grow weary of pressing the LOCKOUT and MANUAL keys for each empty channel.
There are 10 banks of 100 channels each. Bank 1 is for channels 1-100, bank 2 for 102-200, and so forth. This is more difficult to use than the numbering convention employed in the Icom R-7100, where bank 0 is for channels 0-99, bank 1 for channels 100-199, etc. With Icom's numbering system, you can easily tell what bank a channel

is in by its first digit, e.g., that channel 650 is in bank 6. In the PRO-2035, channel 650 is in bank 7, and that's confusing. All that aside, a better scheme would be to have more banks and fewer channels per bank, say 50 banks of 20 channels, or even user definable banks, because a bank of 100 channels is really too large for sensible programming.

Almost 20 years ago, the Electra/Bearcat BC-250 incorporated a fantastic new feature termed "search and store." One could program a pair of frequency limits, start an automatic search, and store all active frequencies into a special scratchpad memory. The active frequencies could later be recalled and programmed into regular memory channels. Electra's scheme was elegant -- smart enough to store each active frequency once and only once. What's more, one could store unwanted frequencies, e.g., birdies and paging frequencies, into the scratchpad and they would be skipped during conventional searches. Today's Icom R-7100 receiver boasts a similar feature.

Scanner hobbyists were hoping Radio Shack would offer a search and store feature in its next premium scanner, and it did -- sort of. The PRO-2035 has an Auto Store mode which stores active frequencies found during a search into one or more conventional memory banks. Once all the empty channels are filled, the PRO-2035 emits a series of beeps and stops searching. There is a separate pair of frequency limits for Auto Store so you won't use up one of the 10 pairs mentioned earlier.

What a pity the Auto Store implementation is not all it could be. You cannot use it to skip unwanted frequencies. Worse, it will store the same frequencies over and over again into empty memory channels. Let's say you program the PRO-2035 auto store limits to search between 407 and 419 MHz, and specify that active frequencies will be stored in bank 4. You start the search and let it run while you run some errands, hoping that while you are away, the PRO-2035 will be catching dozens of interesting federal frequencies.

Upon returning, you find the PRO-2035 snared a busy Veteran's Administration hospital paging system and stored the same frequency in 30 channels! That's just what happened during the evaluation. Even with its limitations, the Auto Store mode is beneficial and a few new frequencies were found while using it.

Here's a tip not mentioned in the owner's manual -- you can use the Auto Store mode to intentionally store the same frequency in several channels. Set both the lower and upper auto store limits to be the same frequency, open the squelch, and start the auto store search. The PRO-2035 will chug along, storing your favorite police or other

frequency in all the channels in the banks you selected.
The tests which follow were performed by switching
an outdoor Antenna Specialists AV-801 antenna back and
forth between a PRO-2006 and the PRO-2035.

Sensitivity

Spot checks were made to compare sensitivity by
listening to the same weak signals on both scanners. Both
radios were similarly sensitive except in three instances:
the PRO-2035 was slightly more sensitive at 147 and 852 MHz
and noticeable more sensitive at 460 MHz.
This could be splitting hairs, as my 10 year old
Electra/Bearcat BC-300, an old design optimized for 4
bands, beat both Radio Shack models in the sensitivity
department.

Dynamic Range

The PRO-2035 and PRO-2006 are high end models, and
people who buy them are more apt to connect them to outdoor
antennas. Therefore, it's important that they perform well
in strong signal environments.
Perhaps the biggest performance difference between
the PRO-2006 and our PRO-2035 became apparent when
listening to weak signals in the presence of a strong
station transmitting on another frequency. The PRO-2006
has much better dynamic range than the reviewer's PRO-2035.
Using the PRO-2035, a moderately strong signal from
the 460.525 MHz sheriff's repeater 10 miles distant wiped
out weaker signals on frequencies 50 kHz in either
direction and produced hiss on weak signals 100 kHz away.
The desense phenomenon was a problem in the 155 MHz band,
too. The PRO-2006 was not affected by these signals.
To explore the problem further, the PRO-2006 was
replaced with a PRO-2005 and the tests run again. Neither
the PRO-2005 nor PRO-2006 were desensitized by the
moderately strong signals.

Images and Spurious Responses

The PRO-2004/5/6 series, the portable PRO-43, and
the PRO-2035 use "up conversion," but the PRO-2035's
609.005 - 613.5 MHz first IF (intermediate frequency) is 2
MHz higher than the earlier models. We speculate the
change was made to avoid interference problems which
bothered some owners of the earlier scanners who lived near
a channel 20 television transmitter. The TV signal mixes
with one of the local oscillators and generated a third
signal near 48.5 MHz, the 2nd IF, causing interference on
several frequencies.
Although up conversion affords improved image

rejection, triple conversion and frequency synthesis circuitry are complicated and several images were heard, especially on the PRO-2035.
On both the PRO-2006 and PRO-2035, images of paging transmitters were audible in the 159 - 162 MHz range. Analysis shows these signals to be 771.9975 MHz higher than the displayed frequency. For example, the 931.5125 MHz KOR933 paging transmitter, located more than 7 miles away, was heard when the PRO-2035 was tuned to 159.515 MHz.
A paging image hindered reception of a sheriff's repeater in the next county on 159.15 MHz. The same paging images were present but barely detectable on the PRO-2006.
Another image, heard only by the PRO-2035, appeared on 146.075 MHz, and it was actually a 904.075 MHz data transmission.
The PRO-2035 received cellular phone images, reduced in strength, between 1105 and 1115 MHz. The difference between the actual and displayed frequencies varied:

PRO-2035 tuned to (Image)	Actual transmitted frequency (Actual)	Difference (Actual - Image)
1105.550	870.450	235.100
1107.875	876.120	231.755
1110.900	881.100	229.800
1113.470	886.530	226.940
1114.840	893.160	221.680

New Features

The new tuning knob has a light feel but is a welcome feature nonetheless. A look inside the PRO-2035 revealed the tuning knob is connected to a special switch assembly rather than an optical chopper, or photo interrupter, used in higher price radios and computer mice.
The knob can be operated as a channel selector or as a VFO control. We discovered a technique, not mentioned in the owner's manual, which let's one enter a frequency and tune around without actually storing the frequency. To tune around 154.6 MHz, for example,

1) press MANUAL (if not already in the manual mode)
2) press 154.6
3) press TUNE
4) rotate the knob in either direction to begin tuning

If you have never used a scanner with a tuning knob, you will be pleasantly surprised how handy it is to be able to tune around using a knob instead of fighting with the up and down keys on the PRO-2006.

While putting the PRO-2035 through its paces, the tuning knob was used in the VFO mode to chase down and identify a spurious paging signal, a "spur," which was drifting up and down the 2 meter ham band. The spur caused a serious interference problem to three area repeaters. Chasing a wandering spur requires the use of a tuning knob and the PRO-2035 served well. The PRO-2006 was virtually useless in this application.

Other Considerations

The PRO-2035 specifications state 50 channels per second as the fastest scanning speed. Our PRO-2035 scanned slightly faster than 50 channels per second in a bank loaded entirely with 800 MHz NFM frequencies, and slowed to 40 channels per second in a bank purposely loaded with a mixture of frequencies in different bands and modes.
Some scanner buffs refuse to use the priority feature on their radios because priority sampling tends to "chop up" transmissions on nonpriority channels. The priority feature in the PRO-2035 is well behaved in this regard, and one can hardly tell it's enabled.
While the squelch on the reviewer's PRO-2035 had an acceptable amount of hysteresis, some users may wish to reduce it. That is, decrease the amount of "play" in the squelch control. One could lessen the hysteresis by replacing the tiny 100 Kohm surface mount resistor between pins 12 and 14 of IC-2, a TK10420, with a 220K or 330K ohm resistor.
Wine gets better with age. That's not true with the EL (electroluminescent) panel used to backlight the displays in the PRO-2004, PRO-2005, and PRO-2006. The EL panel grows dim as it is used. To prolong its life, GRE replaced the dimmer switch in later production PRO-2006s with a switch used to turn off the back light.
Instead of an EL panel, the new PRO-2035 utilizes LEDs (light emitting diodes) to illuminate the display, and that's an improvement. Unless overdriven, LEDs will work reliably for a very long time.

Summary

Being at the top of the Radio Shack scanner line, we expect a lot from from the PRO-2035. Its tuning knob and memory manipulation features are significant advantages over the PRO-2006. The discontinued PRO-2006 exhibited better dynamic range and fewer images and remains an excellent performer.
The PRO-2035 is a very good scanner. With a few changes, it could be a great scanner.
After this review was written, Uniden introduced the

BC9000XLT top line base model, which the author tested and prefers to the PRO-2035. See the BC9000XLT review in Monitoring Times, March 1995 for more information.

This is one of those times where you box the scanner up and mail it
(insured) to Uniden. I belive you also have to send along a $50.00
check or money order. If the repairs exceed this, they will write you.
If repairs are less, they will reimburse you the remainder. But in our
case, if you send $50.00 with your radio, be prepaired to send in some
more money. Uniden's repair shop is excellent from my experience. I
even mailed in my BC 200XLT with cell mod made and inclosed a signed
note requesting they not Un-Mod my mod. When I received the unit back
the first thing I did was check to see if they had replaced the resister
that I had removed. It worked like a champ. They fixed the radio, but
di not touch the mod. It was a pretty old and well used radio when I
mailed it to Uniden for repair. I also sent in a comprehensive list of
what I thought was wrong or what wasn't working. I also got it back
in less than 45 days. I thought that was great turn around time giving
the number of radios their repair shop has to fix.

Just my experience, and it was a very good one. Hope this helps you
deicde on how to best handle your 200XLT. Oh! They also brought the
radio back into specs via tuning/re-tuning. Works now probably better
than the day I purchased it.

I also agree. while scanning with my UNMODIFIED pro-2026, I have heard my own, as well as other people's cellular conversations. I'm not sure if it's "ghosting", a phone malfunction, or what, but it is possible.

> it, except a few old geezers with an attitude.

Actually, all pilots use Morse to identify navigation radio becons.VOR and ADF
stations modulate morse at 1050 kHz, TCAN
(military) modulates it at 13 - something kHz, and I forget where
DME has the "ident".

You're suppose to verify the letter designator of the station that
you tune to while using the navigation radio.

And it IS more reliable.

> That should tell you
> something. I find it humorous that the "know code" faction preaches
> about how great Code is, yet can't explain why this so obviously great
> and wonderous communications mode is rejected almost unanimously.

It's great because the entire power of the signal is concentrated at,essentually,
a single frequency. It is great because a trained ear
can pick morse code out of a lot of noise.

A buddy of mine who was a communications officer in Brittan
told me a story about how his unit was setting up a big rhomboid
antenna for HF communication with another outfit in South Africa.

He watched his men fiddle with the antenna, then go huddle near
a fence and then go back and fiddle somemore with the antenna.

He was curious and went to see what the huddle was about. There
one of his men was tapping out in morse code, low power, and
was communicating with the South African unit. They were
checking to see if they were getting a signal with the big, offical

rhomboid antenna. You can do with code with a few watts what
takes a few kiloWatts with voice.

People don't use code anymore because it's too hard to learn.

> > Please remember that ham radio is not commercial and I for one believe that

> on.

While I agree that code and voice are two different things. considerbandwidth.
Code is MUCH more efficient, power wise. It also take
up much less spectrum. 3 kHz voice requires much more power than
a couple dozen Hz code. And code is much less suseptible to certain
atmouspheric efficts, or the effects of speech intelligibility. And since
there is only 30 MHz of HF anyway, at 3 kHz per voice, it would get
used up with not a whole lot of communication.

The reason why code is required of Hams is because it's simple
stuff. The transmitters are simple, and so are the recievers. Its
harder to screw up, and when you do screw up, you take out
less bandwidth. Of course, in this day and age, Ham radio is
no longer about radio technology. Only heros build their own
rigs anymore, and most who do build their own are looked
down upon by the guys with the multi-thousand dollar rigs
from ICOM. Code was required of novices because it
was easier to build and operate and screwing up did less
damage to the frequency space.

> I would buy your "basics" argument except that Code is the "basic" of

> even OWN a straight key.

I have two bugs myself. Don't have one of those neat little computerprograms, But
then, I let my license lasps. No time to listen to old
men talk about their latest prostrate operations anymore. :-)

> For the record, I got my ticket the "hard way"; if you're going to rip
> me, find another angle.

Good for you. But getting your ticket is not an excuse for notknowing the
advantages of code. It's basic radio communication
stuff. You seem to be well aquainted with its disadvantages, which
is good.

> Charlie

I have a feeling you're right on the mark on this one. I've never voted
for a democrat, and those who know me already know this by heart.

But if you will remember that it was a Republican from Louisiana that
proposed the most damaging law. In its original form, it would have
made the U.S. the most restrictive in the world in terms of scanners.
This is a situation that you would have assumed only occured in
communists countries such as the old Soviet Union or China.

Americans better be exceptionally careful. This is not the only
thing Congress wants that you have. They continually pass
more and more restrictive laws on guns and other things that
when I was growing up in the 1950's and 1960's there wouldn't
have even been an arguement over in terms it was off limits
for the federal reps to even consider such a law.

Well scanner fans, welcome to the United Socialist States of America.
And this is just the beginning. It's called gradualism. They take a
little here and a little there while people aren't watching and Congress
buries these super-restrictive laws inside other laws that have

absolutely nothing to do with the original subject.

You/we had better watch Congress like a hawk. The next thing
the'll come for are your children to send to Government controlled
brainwashing schools. It's not too far off either. I've checked some
of my kids school texts as well as teacher-assigned homework and
I'm amazed at what these people are doing.

Well, so much for that sidebar soapbox. Apologies for takeing up
so much bandwidth. But I happen to feel this is extra-ordinarily
important, and if American's don't wake up, what used to be their
country will soon be under total control of the United Nations.

I have been also successful with POCSAG decoding using sound card connected to Winradio, although this in theory should not work because you should use a direct connection to the FM discriminator because of the low frequency component - apparently Winradio has a very good audio frequency response on lower frequencies otherwise this would not work.

I must admit I don't know much about ACARS - what type of modulation does it use?

Mike

Newt does not back the bill his office told me just last week when I
called about another issue. Tauzin is a wolf in sheeps clothing. He
did convert or switch partys just to save his rear end and keep his job,
but as we can see, he is still a confiscatory democrat through and
through.
Why is it that democrats are the ones always trying to take stuff away
from Americans? They passed the Brady Bill, Assualt Weapons Band, Radar
Detector Bad for trucks, the largest Tax increase in history, etc, etc.!

This has been posted before, and I am looking for any tech/non-tech answers. Anything related to this model would be appreciated as I haven't had much luck figuring out the modification for this unit. I have had very many successful modifications on other units (RS, BC, Uniden, etc) but for some reason I just can not for the life of me figure anything out.

I am looking for, but not limited to, the following modifications for the Radio Shack PRO-29 800mhz scanner:

1) Cellular Restoration
2) Memory Expansion/Utilization
3) Antennae Modifications/Expansions
4) Power Saver Addition

Waiting to hear from anyone via email or newsgroup reply. Posting to both email and newsgroup would be appreciated...

Don't know about where you guys are from, but NC requires a little school
called BLET and then you can try and get a job as an officer. That seems
harder than the old way of OJT. And the same for the fire service,
retired after 23 years and it is harder than ever.

Back to the code! Keep it but also make amateurs prove they are
proficient in packet, amtor and all other sub cultures of radio. This
includes having respect for others.

Many scanners will receive callular (820-849 and 869-896) or can be easily
modified to receivethese frequencies.

you hear everything from a wife asking her husband to get some groceries
girlfriend-boyfriend arguements and breakups
realestate deals
construction crews ordering equipment and supplies
people making credit card purchases
people checking their bank account balances
people calling their stock brokers
people reporting accidents, drunk drivers, and other road hazards
people making airline reservations

I even heard a gal give her friend directions to her apartment for a party
I was in the area when I heard this...only whish I could have gone to the
party too :)

cell calls, for the most part ARE NOT private unless they are encrypted.

I tell people I know that use cellular phones or cordless phones to be
careful about what they say.

Generaly, you can only receive a cellular call as long as you are within a
few miles of the phone or the cellular base station. you can receive the
base stations for a greater distance than the mobiles.

I have a Standard C528A 2m/440 handheld I would like to sell.
It's clean, lightly used, and has a new battery pack. It puts out 5
watts on both bands. It comes with the manual, schematic, and original
box. I've done the keyboard mods to extend the TX/RX range. I'm asking
$300 US but will entertain best offers. If you are interested, please
email me at perry@alpha.jpunix.com.

Source record: 180170

Hi there.

I found a mod for the Realistic HTX-100 which allowes 26-30 MHz, but when I did the mod, it did not work. Here are the details. But first, here's the mod I got:

>Remove bottom cover. With the radio upside down and display facing you remove >the synthesizer board with the four screws, this is near the front of the radio.

>This gives access to the small board underneath with the surface mount >components on it. Locate the processor chip IC401 (UC-1208).Locate pins 28 >and
>29 which are on the right hand side of the chip and are 4th and 5th from the >top. Note they are bridged with solder.
>CAREFULLY cut the copper track NEXT to the pins. DO NOT attempt to >unsolder the two pins form the board. Use a GROUNDED soldering iron. Locate >the two rows
>of connector pins above the chip. On the bottom row locate the last pin on the >right. Verify with a VOM that this
>pin has + five volts. Solder a 10k (1/4 w) resistor between this pin and pins >28 and 29 on IC401.The synthesizer will now tune from 26.00 Mhz to 30 Mhz.

Ok, here's what I did: I found pins 28 and 29 on the IC401 (UC-1208), they were bridged together with solder, as it said. I took a 10k resistor and soldered it between pins 28 and 29 and the last pin on the right lower connecter row. I powered the radio up, and it works as usual. I don't get the expanded range, it just covers 28.000 - 29.699 MHz as it does normally. There was absolutly no change at all. Should I reset the radio after the modification? It seems like nothing changed! I am also looking for the schematic for this radio. If anyone can help with either problem, PLEASE HELP. I would REALLY APRICIATE any ideas that you might have on what may be wrong. Please email me. Thank you very much.

Based on what you just said, you have a broken connection in the jack, or to the board inside the scanner. Open it up and look at the jack connections under a good light and possibly with a magnifying lens. Then, just resolder the broken connection.

I am interested in finding a listing of frequencies that are commonly known as ARINC frequencies. These are typically used by the airlines as company frequencies where the pilots can talk among themselves, talk to maintenance bases and call in range to destination airports. Typically they are found from 130.0 - 133.0 or around there. Could someone point me in the right direction or provide me with a list of some of the major freqs say for Continental, United and such? Any info will help.

Thank you,
Mike Mikolay

Well, I wish I could agree with the Libertarian party, but so far,
they seem to be a bunch of organized dope smokers and that is about it.

Here it is:

Amendment in the Nature of a Substitute to HR 2369

Offered by Mr. Tauzin of Louisiana

Strike all after the enacting clause and insert the following:

1. SECTION 1. SHORT TITLE.

This Act may be cited as the "Wireless Privacy Enhancement Act of 1997."

SEC. 2. COMMERCE IN ELECTRONIC EAVESDROPPING DEVICES.

(a) PROHIBITION ON MODIFICATION--Section 302(b) of the Communications
Act of 1934 (47
USC 302(b) is amended by inserting before the period at the end thereof
the following: ", or to modify
any such device, equipment, or system in any manner that causes such
device, equipment, or system
to fail to comply with such regulations."

(b) PROHIBITION ON COMMERCE IN SCANNING RECEIVERS - Section 302(d) of
such Act
(47 USC 302(d) is amended to read as follows:

"(d) EQUIPMENT AUTHORIZATION REGULATIONS--

"(1) PRIVACY STANDARDS REQUIRED - The Commission shall
prescribe
regulation, and review and revise such regulations as
necessary in response to
subsequent changes in technology or behavior, denying
equipment authorization
(under part 15 of title 47, Code of Federal Regulations, or
any other part of that
title) for any scanning receiver that is capable of--

"(A) receiving transmissions in the frequencies that are
allocated to
the domestic cellular radio telecommunications service or
the

personal communications service;

"(B) readily being altered to receive transmissions in such
frequencies;

"(C) being equipped with decoders that-

"(i) convert digital domestic cellular radio telecommunications service, personal communications service, or protected specialized mobile radio service
transmissions to analog voice audio, or

"(ii) convert protected paging service transmissions to
alphanumeric text; or

"(D) being equipped with devices that otherwise decode encrypted
radio transmissions for the purposes of unauthorized interception.

"(2) PRIVACY MEASURES FOR SHARED FREQUENCIES - The Commission shall, with respect to scanning receivers capable of receiving
transmissions in frequencies that are used by commercial mobile services and
that are shared by public safety users, examine methods, and may prescribe
such regulations as may be necessary, to enhance the privacy of users of such
frequencies.

"(3) TAMPERING PREVENTION - In prescribing regulations pursuant to
paragraph (1), the Commission shall consider defining 'cable of readily being
altered' to require scanning receivers to be manufactured in a manner that
effectively precludes alteration of equipment features and functions as necessary
to prevent commerce in devices that may be used unlawfully to intercept or
divulge radio communication.

"(4) WARNING LABELS - In prescribing regulations under paragraph (1), the
Commission shall consider requiring labels on scanning receivers warning of the
prohibitions in Federal law on intentionally intercepting or divulging radio
communications.

"(5) DEFINITIONS--As used in this subsection, the term
'protected' means
secured by an electronic method that is not published or
disclosed except to
authorized users, as further defined by Commission
regulation."

(c) IMPLEMENTING REGULATIONS--Within 90 days after the date of
enactment of
this Act, the Federal Communications Commission shall prescribe
amendments to its
regulations for the purposes of implementing the amendments made by
this section.

SEC. 3. UNAUTHORIZED INTERCEPTION OR PUBLICATION OF COMMUNICATIONS.

(a) AMENDMENTS--Section 705 of the Communications Act of 1934 (47
USC 605) is
amended--

(1) in the heading of such section, by inserting "INTERCEPTION
OR" after
"UNAUTHORIZED";

(2) in the first sentence of subsection (a), by striking
"Except as authorized by
chapter 119, title 18, United States Code, no person" and
inserting "No person";

(3) in the second sentence of subsection (a)--

(A) by inserting "intentionally" before "intercept"' and

(B) by striking "and divulge" and inserting "or divulge";

(4) by striking the last sentence of subsection (a) and
inserting the following:
"Nothing in this subsection prohibits an interception or
disclosure of a
communication as authorized by chapter 119 of title 18, United
States Code.";

(5) in subsection (e)(1)--

(A) by striking "fined not more than $2,000 or"; and

(B) by inserting "pr fined under title 18, United States
Code," after
"6 months,"; and

(6) in subsection (e)(3), by striking "any violation" and
inserting "any receipt,
interception, divulgence, publication, or utilization or any
communication in
violation"; and

(7) in subsection (e)(4), by striking "any other activity
prohibited by subsection
(a)" and inserting "any receipt, interception, divulgence,
publication, or
utilization of any communication in violation of subsection
(a)".

(b) RESPONSIBILITY FOR ENFORCEMENT--Notwithstanding any other
investigative or
enforcement activities of any other Federal agency, the Federal
Communications Commission shall
investigate alleged violations of section 705 of the Communications Act
of 1934 (47 USC 605) and
may proceed to initiate action under section 503 of such Act (47 USC
503) to impose forfeiture
penalties with respect to such violation upon conclusion of the
Commission's investigation.

Go to Part 47 of the U.S. Code, Section 302 and to see how Section 2
applies to
scanning receivers if amended.

Go to Section 705 of the Communications Act of 1934 to see how the
proposed
amendments to Section 3 will affect the radio hob

>Have you heard anything about this?

That's pure bullshit! There is a bill pending in Congress that will impose some additional restrictions on scanner manufacturing and radio monitoring, but it's nothing that would put Tandy or anybody else out of the scanner business. Besides, Tandy buys their scanners from GRE and Uniden, and both those companies will continue to make scanners for the overseas market, so you can bet Tandy will continue buying them for sale here as long as the public wants to buy them.

Check out www.popcomm.com for details on the proposed new laws.

4275. HR2369 - Letter to Senator- Opinion

Newsgroup: rec.radio.scanner
Date: 1997-11-17 00:00:00 UTC
From: herb jabs <jabberh@worldnet.att.net>
Message-ID: <64ovqg$ka7@mtinsc04.worldnet.att.net>
Source record: 180196

Dear Sen. Kohl:

I am writing to appose the passage of HR2369 bill which could make police scanners illegal. Possession and use of police scanners does not constitute a crime, where in fact there have been numerous instances where some of the conversations heard over a scanner have allowed me to tip Madison's "Blue Blanket", a special division of the Madison Police Department drug enforcement of illegal activities in my neighborhood.

Most users of scanners are law abiding citizens and generally share an interest in the successes of their local police, fire, and other organizations. Most of their listening is of curiosity, information, and of support for the agencies they frequently monitor. In addition, it allows listeners to monitor their public service employees effectiveness in various situations and in my case has truly allowed me to appreciate the challenges they face on a day to day basis.

Most police agencies have secure channels they can use for confidential usage if needed. If the concern for the bill HR2369 is to limit their access to criminals to be illegally used as an advantage in their pursuits then the bill is not justified. Most criminals have access to illegal goods regardless of specific laws passed to prohibit them such as hand guns and other powerful weapons, drugs, counterfeit money and the like. A bill such as HR2369 can have minimal effect.

The trade off is not favorable. Often have I heard of officers looking for a specific vehicle traveling through the state as a wanted individual and in one instance I did come across that vehicle in my travels. I was able to contact 911 with my cellular phone to notify police of the sighting. Scanners can and do help local officials by their users providing information that can assist their pursuits.

Many police agencies, television shows, and other multimedia efforts have put together "most wanted" programs or listings for citizens to be on the lookout for criminals to assist in their investigation. Information from a police scanner is another tool individuals have to assist in helping make their local a safe and low crime area.

As to the privacy issue pertaining to cordless phone and cellular phone monitoring it is unfortunate that those frequencies fall into multi purpose bands. Industry has already responded by marketing digital cellular phones along with numerous models of digital security in 900MHZ cordless phones. Products are available for consumers to purchase should they have concern about privacy at near equal pricing to non secure conventional cordless phones. Consumers do have a choice.

On a secondary note, it is also my understanding this bill may also include language to restrict or eliminate the use of radar detectors. If true consider their effectiveness in helping control traffic, that is with the emergency radar used in areas such as construction zones and accident areas, the radar signal triggers radar detectors in all the vehicles that have them and help slow down traffic in areas of concern. I90/94 under construction in Madison uses the technique as a 24 hour measure to limit speed in a hazardous area of the interstate.

Here again, if the effort of the bill to restrict radio monitoring to help control speed on our highways those users who are habitual speeders will continue to do so regardless of the measures short of a speeding ticket or a police vehicle hiding in a ditch.

I feel most people who use scanners use them in a responsible manner and for the most part rely on them for information in pursuit of safety. Most people who use a radar detector such as myself use it to help me keep alert as a random reminder to monitor what my speed is rather than use it as a crutch as a free ride to high speed driving.

Most people who have owned a radar detector and used the crutch, have paid a fine or two for what they perceived themselves as untouchable. Now they own one to help them stay in check with their driving habits so as not to find them digging in their wallets again for their foolishness.

Sincerely,

Herb Jabs

4276. Digital/Encryption/CTCSS

Newsgroup: rec.radio.scanner
Date: 1997-11-17 00:00:00 UTC

You may be confused on the technology of radio.

Digital simply means that the voice is being carried at ones and zeros across the airwaves--it's not been encrypted per se. It's just that an analog radio won't be able to properly decode the digital data and produce a voice.

Encrypted signals are specifically scrambled in order to prevent anyone from decoding the voice or data signal. I suppose you could encrypt analog, but it's really at its peak with digital radio signals. Unless you have some real computer horsepower, properly encrypted signals aren't crackable.

Continuous tone carrier squelch (CTCSS) means that a sub-audible tone is added to an analog radio signal, to help distinguish it among other users of the same frequency and reduce interference. It isn't meant for "privacy," although that's what it's sometimes called by Motorola. Practically speaking, it just filters out some radio station on the same frequency that's beyond the hills, yet comes through loud and clear on summer nights, etc.

Hope this clarifies.

I am also a member of the ARRL, although I do not like their viewpoints
lately, and WELCOME a message such as the one posted giving me an
alternative group to join that may have issues more in the direction of
myself. I don't think wording it any other way would have got the point
accross that I indeed understood.

Just like George Washington and Thomas Jefferson. If your refering to
the single issue (out of many others) of RE-legalizing Marijuana, did
you know that at one time in this country, many farmers were REQUIRED to
```

grow it! It was much needed in producing ropes for ships, as well as material for clothes. And lots of people smoked it as well, no worse than having an alcoholic beverage today. I'm sure during prohibition of alcohol, there were those like you that would have been against any party that wanted to RE-legalize alcohol, thinking that it was ALWAYS illegal, just as most do not remember NOW that Marijuana and other drugs were not always illegal as they have been in the last few decades.

I have a very nice Compaq 386 computer with color monitor, keyboard and mouse. This is a complete working system, fully operational, with Windows 3.1 loaded on it. I will trade this system for a 2005 or 2006 scanner.

From: sctreact@aol.com
Message-ID: <19971117145200.JAA17534@ladder02.news.aol.com>
Source record: 180211

DISASTER COMMUNICATORS NEEDED:

The IMPACT Disaster Response Unit is looking for volunteers to help staff a one-of-a-kind Disaster Response Unit. The IMPACT Unit is on-call with most public service agencies through-out Southern California. These agencies include Fire, Police, Sheriff, CHP and more.

With the expected winter storms of El-Nino, IMPACT is going to be very busy and can use lots of help. We utilize all types of communications; including CB, Amateur, GMRS, FRS, VHF/UHF Commercial Bands, Cellular and more. You do not need any special training or equipment to be part of this unit.

Send your snail mail address, or any questions to
sct_impact@bigfoot.com
and we will send you more information and an application for the IMPACT DISASTER RESPONSE UNIT right away.

Thanks,
IMPACT Board of Directors

here are the undocumented features for BC9000xlt

****Uniden Bearcat BC9000XLT Tricks****

By holding down the 2, 9 & DLY keys as you turn the 9000XLT on, you
enter a
sort of Test Mode. To do a "keycheck test" you can hit any key or turn
the VFO
knob either direction and the alpha display will tell you what key
you're
touching or which direction you're turning the VFO knob.

At this point, if you momentarily hit LOCK (to the right of the VFO
knob) and
one other button various things will happen:

LOCK & C - REPLACES ALL MEMORIES w/1300MHz and alpha-tags channels
1-250
with CH 00-249 in the display. Again, will effectively wipe
out
your memories!

LOCK & D - Checksum and Firmware Version Number (v.09 in ALL 9000s to
date)

LOCK & E - LCD Display Test

LOCK & PROG - Runs a short, continously-repeating Demo Program
incorporated
specifically for showing at the Jan 1995 CES in Las
Vegas. It
also sounds attention tones as the message scrolls on
the
display! (Note that the word "scanner" is spelled
"Scaner" in
the demo program; it was too late to change this booboo
that
originated in Japan.)

The last three tricks will NOT wipe out memory. Only LOCK/C will do
that.

Additional notes

There are more tricks, but they're currently being translated from
Japanese.
One of these has something to do with using the CTCSS button to change
"Decord" from High to Low. No info yet on this.

The Uniden Sales Dept specifically requested that cellular images be
included in the BC9000XLT (since it's legal to do that). The front end
was
left wide open to allow this in the 360-385MHz range.

No reason available on why the FM filtering is narrower (ie less HiFi)
than
on the BC8500XLT. It was done in Japan without explanation.

The audio amp doesn't shut off as in the BC8500XLT during quiet
periods. There
was an improvement in the circuit, but this means a bit of hiss when
no
transmissions are coming through.

All BC9000XLTs (whether built in 1994 - serial numbers 45+ - or in
1995
- serial numbers 55+) have firmware version 0.09. And all have AM mode
available on any frequency the scanner is capable of.

The BC9000XLT is capable of having an alpha tag attached to any
channel, but
250 tags is the limit. (This was verified by doing the LOCK/C trick.
The
scanner loads 250 tags and shows a memory full warning if you try to
enter
additional tags.)

A tip from Bob Parnass (Monitoring Times)

You can use the SND button during a Search as a sort of Radio
Shack-type
MON button, transferring a freq to any bank you'd like to become your
"Monitor" bank. With RS scanners, you have to go through extra steps
to
transfer the memories from Monitor channels to permanent channels.

enjoy

Black wizard

Beware of 900 MHz cordless phones that claim to be digital. I had a
Northwest Bell phone that was alleged to be digital. It was analog
and came in just fine on the scanner. I sent it back.

Don't know if there are any others like that.

>within in the cell freqs. It only picks up cell while in AM mode.

No. It's picking them up in FM, it just sounds like poor-quality AM because it's off frequency. The scanner is not tuning in the proper 30Mhz increments for cellular. I had a Bearcat 200XLT that did the same thing. WOuld tune cellular, but only in 12.5Mhz steps.

This post may be to the wrong group, but I though it worth a try. I wish to purchase a radio for my wife that will permit her to receive a variety of talk shows from other areas. I am unsure whether this is possible. We live in Pittsburgh it is possible what kind of radios' and or antennas are required.

I would like both receiver and antenna recommendations. I would like to get this equipment as a Christmas present for my wife.

Pro 2026 Scanner. 100 channels. Model #20-148. Date code 4 A 2. Very Good condition.

Freq Ranges are: 29-54mhz
108-136.975mhz
137-174mhz
406-512mhz
806-956mhz.

However, this can be cellular modified by clipping a wire in the back of the front panel. Radio has been sitting around for a long time in desk andand not used. Works and looks great.

$120 + COD shipping

Just so everyone knows, McDermott is a verminous reptile of the worst order. To allow this felon to plead to a misdemeanor would be a gross injustice! The only just result for the underhanded dishonesty and breach of public trust would have to involve McDermott's immediate resignation from the House Of Representatives. This absolutely detestable excuse for a gentleman is worthy of the scorn and contempt of the American people and the House calls into question its own standards by allowing him to retain his seat.

VOTES speak loud also. Why let anyone in office if they keep pulling off the same crap? Never ceases to amaze me, people bitch - then vote them right back in.

If need be, Boycott the companies. That is the voice they hear.
I'm not sure this is a good alternative either due to the hardship it may place on the employees, but there HAS to be an answer.

All I am saying basically, is it doesn't matter the party, they are taking away our freedoms a chip at a time, no matter what it is.
Be they Democrat, Republican, etc., vote them out and let yourself be HEARD. But don't blame ALL those of a particular party. ALL of the HIGH RANKING politicians have their own agenda and are getting away with MURDER at our expense. As I said, I too, am Democrat, and I DON'T appreciate their trying to snuff out the right to do the things we've long taken for granted. I ENJOY my scanner and have since I've owned one since they first came out.

Arguing back and forth on here, name calling, finger pointing, and generalizing, solves NOTHING. Why not instead, come up with some workable solutions to the dilemma and THEN post an ad for those here also concerned to get involved and HELP. If people would spend a few moments to call or write their leaders as much as they complain on here, then something MAY be heard and done.

I guess the old adage applies, NEVER take anything for granted.

4334. Using pager as receiver for POCSAG . . . Need pinouts..

Newsgroup: rec.radio.scanner
Date: 1997-11-17 00:00:00 UTC
From: George Viaud <geo69@concentric.net>
Message-ID: <347000BC.7B2EF3AB@concentric.net>
Source record: 180301
Cross-posted to: rec.radio.scanner,rec.radio.amateur

Looking for info from someone who knows pagers.. A few pagers have come my way with diff. receiver freqs. and I want to wire up the receiver end to my computer to decode ALL of the messages on that Frq. . .

The problem:

I can't seem to get the receivers to work independantly (Without the rest of the pager...) . . I can however pull a partial demodulated signal off of the unit when together. It seems that the pager "chops" up the signal on and off twice a second with a 50% duty cycle. . . I can't seem to find another point on the receiver that puts out constant signal.. I do notice however that whenever the pager receives a message intended for it, it allows the signal to come through without the "chop" . . . It also works for a few seconds when the pager is first turned on. Shame shame if these pagers go to waste!

If someone knows the pinouts on the receiver and how to hook it up independant of the rest of the pager, OR . . If someone knows where to pull a signal off of the receiver end without "choped up signal" . . Please drop me an Email :) Appreciate any help or some insight..

Thanks

George

> across the fan leads.
Better yet don't put any filters in , instead connect your power
connection as close to the battery as possible (ground lead as well)
now don't make the mistake some people do and connect your ground right
at the battery post (or if you do put a fuse in line with it) because
if for some reason your main battery ground cable disconnects from the
vehicle all starting current goes through your poor little scanner wire
(poof) anywho if you still have noise after connecting to the battery
then you have a poor bonding problem (all or some of your ground straps
have come loose) and will need to find the loose or corroded ground
strap if this still doesn't do it are you trying to listen to an
aircraft frequency as they are more prone to this type of noise , but
the grounding fixes would still help and yes see if the capacitor that
is usually across the fan motor is loose or bad.
but it sounds like you don't have a good ground going to the scanner.

But to summary the majority of vehicle 'noise' problems were fixed by
moving the plus and minus leads from the fuse block to as close to the
battery as possible and the only time I have had to ever use a filter
was when there was no possible way to connect to the battery and the

maintenance mech. didn't want to repair the alternator :(

Good luck

Such a thing DOES exist. Try http://www.lpcom.com. Most sound cards
are full duplex these days.

Try holding the light key (the one that lights up the display) until the
scanner beeps twice. If that doesn't work, repost your question, but this
time tell us which bearcat you have. Chances are, someone else will have
that same radio and will know what to do.

From: allanstern@aol.com
Message-ID: <19971118211701.QAA06934@ladder02.news.aol.com>
Source record: 179969

I keep the frequency 335.55 programmed into my Pro-2036 scanner, because it is a popular Military air-to-air frequency. Very often I receive transmissions on that channel from the Melbourne Ham Repeater, which is on 443.8, and I hear the repeater self-identify as 443.8. According to the manual for the 2036, its IF frequencies are 10.8MHz and 450kHz. How can I be receiving the image on 335.55?

This is a multi-part message in MIME format.

------=_NextPart_000_01BCF435.AFF5D920

In an earlier post, I mentioned that there was a diagram available for the BC895xlt serial cable. I have since constructed this cable, and was successful in getting both RadioMax and Scan*Star to run it. The diagram is at www.futurescanning.com and the parts to make it cost me about $10 at my local radio shack.

You will need :
1 db-25 or db-9 serial crimp-on connector (or solder connector, if you wish)
1 plastic hood for above connector
1 CD ROM Drive Audio cable

I used the cd-cable for two reasons: 1, the cable has 3 leads in it, which is all you need, and 2, the little sockets inside the large black plastic connector fit perfectly on the BC895's rs-232 leads.(You will need to pull the sockets out of the cable's connector to make them fit.) Then I just clipped the leads at the other end, crimped on the pins, and assembled the connector. Works perfect. ($30 for a cable! Puh-lease!)

The site has all the pinout's, as does my previous posting, so I won't repeat them here. If you have any questions, post them here. I'll be glad to help.

Note: RS does not have an in-line plastic connector small enough to fit the serial port on the scanner. I'm sure some of you are going to want to make the cable as professional looking as possible (I personally didn't, it's ugly sure, but works like a charm!), so if you come across a supplier for the in-line connector, post it here so others will know.

Yeah...I go to the same RS too. It's funny to see the look on their faces when I skip right past the cheezy overpriced digital thermometers and caller ID displays and trot back to the semiconductors and components. I think I know the RS product line better than they do!

The probelm is that like all other retail operations, their management turnover is huge, and the sales staff turnover is even worse. So it's hard to establish any menaingful business relationship.

It's also disappointing when you're treated like crap because all you're buying is a $3.00 semiconductor instead of a $3000 computer. I guess they'd rather sell me a computer once and never see me again than ring up $5-$10 orders for me every week or so.

No Biggie. Just my opinion.
Charlie

I recently installed a pro 2026 in my car along with an outside mag mount antenna and a GRE Super Amplifier 3001. It seems that the amplifier does improve reception but at times also brings in interference. When I turn off the amplifier, the interference usually goes away. I'm wondering if I'm better off with just the antenna and no amplifier. Any opinons or suggestions would be appreciated.

Yep, you are so right! That is why most Republicans really are
working to reduce the size and scope of government on all levels.
But, those old democrats out there still see government as the
solution to all of lifes little problems.
Big Brother has the Democrats on his side!

I would like to sell the above scanner. Excellent (like new) condition. American full frequency bandplan. Includes Optoelectronics Scout & interface + RS232 interface & ScanCat Gold for Windows software. Everything is like new with very little use. I will sell all for $850 or best offer. Will trade for AR3000A (full frequency). Will accept partial trade of Pro 43 (full frequency) or Pro 2006. Any trades must also be in "like new" condition.

If interested, please e-mail jolson@twistedpair.net.

Thank you for reading this posting.

Hi All,

This is a follow up article that appeared in the Seattle Times today!

Bob

McDermott denies he sought deal

by Danny Westneat and David Postman
Seattle Times staff reporters

A top-ranking Republican congressman says he has rejected an offer of a "back-room deal" from Rep. Jim McDermott, and intends to pursue a civil suit accusing the Seattle congressman of leaking an illegally taped phone call with House Speaker Newt Gingrich.

McDermott denies making any overtures, calling the claim by Ohio Rep. John Boehner "ridiculous."

And John Russell, a spokesman for the Justice Department, called the latest allegations "odd" and said the case gets more and more "bizarre."

McDermott is under investigation by the Justice Department and FBI for allegedly violating the Electronic Communications Privacy Act by giving reporters a tape of a cellular call involving Gingrich, Boehner and others.

A Florida couple who recorded the call Dec. 21 say they gave the tape to McDermott, who at the time was the leading Democrat on an ethics panel investigating Gingrich.

Boehner, the fourth-ranking House Republican, says that in return for admitting guilt, McDermott asked he be given only a reprimand and a possible fine by the House of Representatives.

McDermott says it would make no sense to propose a settlement with Boehner because Boehner has no control or authority over the matter.

"It's simply illogical," McDermott said. "They continue to try to use smear tactics."

McDermott never has answered direct questions about whether he leaked the tape. Yesterday, he was in Seattle speaking at a conference on privacy and consumer protection in the electronic age. His prepared remarks centered on legislation he has introduced to ensure the privacy of medical records.

A spokesman for Boehner said McDermott, using "intermediaries," has approached Boehner on multiple occasions since last spring to suggest various ways to "cut some sort of deal."

McDermott said he would be willing to publicly admit he committed a misdemeanor and would accept a reprimand and fine from the House, said Dave Schnittger, a press secretary for Boehner.

Boehner rejected the offer and continues to call for McDermott to resign from the House, Schnittger said.

The spokesman added that while it's true Boehner has no authority over the Justice Department's criminal investigation, the Ohio Republican has stated for months that he may file a civil suit and an ethics complaint once the investigation is completed. Last week, Boehner asked the House Ethics Committee for permission to use campaign funds to pay legal fees associated with the civil suit.

"It's not at all preposterous that McDermott would try to cut a deal with us in an attempt to preclude a civil suit or an ethics complaint," Schnittger said. "The point here is that a federal official presiding over
an ethics investigation has himself committed a felony, has never owned up to it, and now is trying to cut back-room deals to get out of it."

McDermott's attorney, Barry Levine, said statements by Boehner and his staff about felonies and misdemeanors are proof that they are lying. Levine said federal law says disseminating a taped phone call is an "infraction," a lower level of crime than either a felony or misdemeanor.

"Why in the world would Mr. McDermott propose a deal saying he's guilty of a misdemeanor when the code in question says the worst he could be guilty of is an infraction, which is less than a misdemeanor?" Levine asked. "It makes no sense. It's a complete fiction."

Levine also attacked Boehner for wanting to use campaign funds to file a personal civil suit.

"Does this sound like a guy who was wronged," Levine said, "or a guy who is playing political games?"

On the tape, Gingrich could be heard discussing how to respond publicly to his ethical troubles, even though he had promised the House he would not conduct a media campaign. He was later found to have violated that promise.

John and Alice Martin of Florida admitted recording the conversation while listening to the call on a police scanner. In April, the Martins pleaded guilty to an infraction, paid a $1,000 fine and agreed to cooperate with federal authorities if prosecutors would not charge them with other crimes.

Justice Department spokesman Russell would not comment on whether a deal between participants in the case would have any effect on the investigation.

> stereos, burglar alarms, and benchtop radios. Do you?

Well, I store food in the fridge, not to mention photographic film,
certain medications, etc. But what does that have to do with the
supposed "con" of WiNRADiO? WR doesn't have anything to do with
the information in the computer. The guy tried to make the point
that the computer....and therefore the radio....were subject to
lightning damage.

Yeah...so what? All radios are. And anything else connected to
the power gid.....including refrigerators.

> BTW, Do you put 30-foot-high antenna for your refrigerator?

No. But the fridge connects to an antenna that's hundreds of
miles LONG. (the power lines). That's even worse......

Rather than using a pager to recieve, I would use a scanner wired to
a 'Hamming' type interface via either the audio out or discriminator
output. Radio Electronics magazine (may or june??? 1997) has an article
"Simple POCSAG Decoder" that shows how to do this. There is a shareware
program called PD - POCSAG Decoder available that runs on a PC under
DOS. I have found that it works quite well once you get the audio
level set correctly. Good luck.

But unfortunately, I think that decoding pager signals is very
illegal courtesy of our wonderful government.

Brian

$24.75 for shipping!!!!!!!yeah thats real high.I can get a 10lb. gun
shipped cross country for $10.

I'm not a big Clinton fan, but I will say he's no bigger a scum then all
the others before him.

Someone correct me if I'm wrong, but isn't Tauzin a Republican?

I am looking for the base version, not the handheld unit.
I also will need the schematic and book for mods.
Thanks,
Bob

4366. 895 XLT line jack ??

Newsgroup: rec.radio.scanner
Date: 1997-11-18 00:00:00 UTC
From: wizardsden@aol.com
Message-ID: <19971118165100.LAA15537@ladder01.news.aol.com>
Source record: 180034

HELP... I've been using my 895 XLT for several weeks now, and it's performed up to all my expectations... except for one problem. When recording audio from channels selected by the AUX button, there is no output from the line jack - there is however audio at the external speaker jack - of course, this disables the internal speaker, and the audio output level must be adjusted by the volume control. I've checked several other units at local stores, and all have the same symptoms. The techs at Uniden tell me they have no service manuals or schematics for the 895 at this time & they're "looking into" the problem. Has anyone experienced similar problems ?? Am I doing something wrong ??

Thanks... Happy Scanning... Bruce

Jason,,,,,,Your another one,,,,,Stop complaining about the prices
of second hand scanners.........
You sound just like my wife..." Thats too much money !! "
If its too much for you......either your not a scanner
enthusiast.......or......
you better stop flip'in hamburgers and get a real job !!
I have a 2026 and I wouldn't let it go for anything less than $ 175.00
There's another post for a 2026 and he (or she) wants $180 and he
will get it !!!!
later

I own both an Ar-8000 and an R-1. No scanner is "perfect" and has all
the performance and features we'd like. Of the two I'd clearly go with
the AR-8000, though I'd not like to part with my R-1 for various
reasons. I can't speak as to the Yupiteru 9000, but it does have its
adherents. I REALLY like my AR-8000 for what that is worth.

As an interesting (and off topic) aside I just heard "RALEIGH - XX"
(unit number deleted) check in on final with McChord Tower a few minutes
ago. The "RALEIGH" callsign is one that I've associated with previous
B-2 appearances here near Seattle/Tacoma. Whether this is significant is
anyone's guess.

As an interesting (and off topic) aside I just heard "RALEIGH - XX"
(unit number deleted) check in on final with McChord Tower a few minutes
ago. The "RALEIGH" callsign is one that I've associated with previous
B-2 appearances here near Seattle/Tacoma. Whether this is significant is
anyone's guess.

Thanks. Good thoughtful sort of thing in your posting. Altogether too many PLOTS! out there. The real
problem with the scanner grabbers may indeed be the spectrum resellers (cellphone, etc..) who want to
tell their customers that no one will be able to listen to their analog conversations. If you recall the FCC auctions of this type of spectrum, the resellers also have Huge Money to spend on political pimping.It's not about rights, right or left, integrity or its lack. It about reelection money. too bad.
Take care.
John

The ownership and editorial management of the Seattle Times is well known to lean heavily in support of Congressman McDermott in almost every regard. The quoted article (excised for brevity) is, not surprisingly favorable to him To have this individual speaking at a privacy seminar is rank hypocrisy of the worst kind. It should be readily apparent to any who have followed this case that Congressman McDermott is guilty of violating the privacy and confidentiality provisions of both The Electronics Communication Privacy Act as well as the older Communications Act Of 1934. He should do the reasonable and honorable thing and resign forthwith. The man is a scoundrel and unworthy of the public trust!

Two years ago at Christmas time, I was offered a job at our local Radio Shack. Starting pay was $4.50 and hour and a Whopping 1% (yes that is one) percent commission. Ten percent discount off of merchandise too. I don't know if it is universal, but I always try and keep that in mind while I am there. It helps put things in perspective.

Tim, I do not believe that war is the answer to the problems we are
having with Saddam. I also do not trust a draft dogging, dope smoking,
gay loving, womanizer to lead us into war! His ability to think is not
very clear and he often avoids responsibility by calling in the evil
united ugly nations!
How wonderful it will be to see a draft doggers who went to the USSR
to protest against the USA lead our citizens off into war to die.
What a joke!

I'm not absolutely certain, but I believe that the U.S. customs service may seize one that is shipped into the U.S.

However, I also believe that if you went abroad, purchased one, and brought it back with you that would be acceptable. Even if not, the odds of the guy on duty at the airport knowing what he was looking at are probably pretty slim. The odds are probably greater that a package being shipped would be more closely investigated.

I could be wrong about this, so please don't repeatedly flame me as though I'd sworn on a stack of Bibles atop my mother's grave or anything. A simple, polite reply to the newsgroup will suffice.

And John, I suppose you trust Tauzin who at first, was willing to wipe
most of the VHF and UHF right out of the newer scanners.
Wake up man. You are not a first grader who has no idea of what
politicians are like! Tauzin is not trustable at all. If you lower
your guard, he will take advantage of the fact that people have stopped
calling about the bill. This will result in an outcome you never
expected, but then its far too late!

I actually make a little game of trying to see if I can get back to the parts before one of them tries to sell me some gadget I don't really need.
I do it even if I'm really looking for a battery or some other thing they should know about.

Occasionally I'll even get my girlfriend to go in at about the same time as me and we see which one of us they'll stop. She doesn't think its quite as much fun as I do to mess with the sales droids.

In all fairness, though there are a couple of store managers in the stores I frequent that really know their stuff.

Dave,

Another hint for getting along with people in here...

When someone posts privately to you, you do not, in turn, then take that private message and then post it back out on to the newsgroups. When they take it out of the newsgroup it's like "taking it to simplex," so to speak, to continue a conversation off the "main frequency," and to have a private discussion.

That's the quickest way to lose all friends as well as the chance at any further communication with people.

Now that you've done that, I'm wondering how many of your other posts are others' messages also posted to you privately.

Todd

Your "Modified HT" (Ham HT I suppose) is not legal to use on FRS Freqs. It has too much power and the bandwidth of your transmissions is too wide. If it is a ham HT then it's also off-frequency here and probably emitting other spurs you are unaware of. You are probably causing interference to legitimate licensed GMRS operations and or repeaters. Personally I dont care but this sort of thing leads to radio chaos. There is usually a reason for rules and regs. There are reasons FRS doesnt require a license, uses low power, uses narrower bandwidth, etc. And while I'm here go jump off a cliff Emilio.

>
>It should work with any trunked system.

Sounds like a cool mod. However, as all too many of us are all too well aware, the problem with the EDACS trunked systems is not so much the control channel data, (which is usually changed once a day in EDACS systems), but the annoying "anti-scanner" tones at the end of each and every transmission. When GE first started setting up these systems the "tones" consisted of the most horrible rendition of the "G.E. - We Bring Good Things To Life!" theme music ditty, played in loud, obnoxious, off-key, square wave tones, if you can imagine that. I first heard those mellow tones several years ago while visiting Corpus Christi, Texas. (Scanning between all those steak tacos, I gained 10 Lbs on that trip!). We were staying at the Bayfront Marriot, and from my 18th floor room I found I could beat the system by listening to the mobile inputs.

It seems the theme song got to be a little to controversial, advertising as they were on public safety frequencies, so in many areas EDACS now plays 5 little annoying beeps at the end of each transmission. While you are still hungup on those beeps the conversation in progress has moved to a new frequency pair and is already continuing. And yes, the frequency changes each and every time somone in a talk group unkeys their radio.

The Illinois State Police in the Chicago area is now using an EDACS system. I had a ScannerMaster anti-edacs board in my PRO-2004 before it died (the radio, not the board). It worked great. It would not follow talk groups, but simply sent the scanner back to scan when it encountered one of those beeps. You still had to lockout the control channel daily as it rotated around and un-lock yesterday's. I can't imagine how cool it would be able to actually be able to follow the talk groups on this system. I have heard of people getting GE trunking handhelds and hacking the programming to get it to follow groups as a receiver, but right now, that's the only way and you need access to the programming software, cables, codes, etc.

The simple fact that edacs has "anti-scanner tones" may serve as a indicator of the political difficulties ahead for any manufacturer wishing to build an edacs trunk-tracker scanner. But then I remember Motorola's "The Eavesdroppers" ad they ran promoting the non-existant security of their trunked system to public safety users. (Nothing like an educated consumer...). It appears Uniden was able to assuage Motorola's fears by blocking unit-unit calls and phone patches on the trunk-trackers. You guys who bought those things DO realize that you are not tracking those types of calls while folks with conventional scanners are still hearing them, don't you??? Most EDACS systems are digital ready for future expansion. The ISP's system is also DVP/DES capable and it does get used from time to time. The ISP system also includes conventional repeaters on the NIPSPAC 800 Mhz Mutual Aid Channels. If you have any public safety trunked 800 Mhz systems anywhere is your local area, especially those employing the 866.0125-868.9875 freq range you should have these in your scan bank, as chances are, someone in your area has the capability of using them:

866.0125, 866.5125, 867.0125, 867.5125, 868.0125

Happy Scanning & visit the CARMA Web Page:

Any other Optoelectronics Xplorer users floatin around with tricks &
tips up their sleeve?
Lookin for mods & unlock codes for the Xplorer, saw the Cell Unlock code
on here before but didn't pay it any mind. DOn't care all that much for
cell, but now would'nt mind having ability to Unlock & lock back at
will... Understand only certain models are able to be unlocked... can
anybody fill me in?
Any body try using the Audio from the Xplorer for decoding data? i.e.
POCSAG...
Understand you can run it through the Optolinx's "AUX" input and that
will convert your levels for decoding via PC, any comments?
Would ike to get the most out of this incredible toy while I can.

jg@izap.com
New Xplorer user.

I hear what you are saying, but how do you account for the fact that
it was Bill CLinton and a Congress owned by Democrats in 1993 who passed
the Brady Bill, the assualt weapons ban, the radar detector ban in
trucks, etc. etc. And, do not forget that since he has been in office,
Clinton, Bruce Babbit, and EPA head, Carol Browner, have done all they
can to chip away at your property rights! Now the damn EPA is about to
outlaw the usage of your backyard grill, your fireplace, some if not all
gasoline powered lawn equpt, new and heavy taxes on your vehicles, etc.
All done under Comrad Clintons new clean air rules from the EPA.
We had better wake up in America and quick! Soon, we will live in a
socialized country with an all mighty government controlling your every
move! But few seem to care as long as they have money in the bank, they
look the other way instead of marching in the streets.

One of the most irritating and aggravating scenarios
in the Universe is when somebody lets the cat out of
the bag and spills its guts all over creation.

Now my dear Mongrel Monkey Mackey is going to hit
me up for a raise in his commissions. He's been
bothering me for a raise anyway, since his main job
at a state insane asylum as a bedpan changer competes
with his time to work for me. He thinks I should pay
him more for this highly technical work.

Dang! Drats! Why did you have to tell all? Why? Why?
Please tell the good people that you were just kidding.

Pretty pleeeeeeze........???? I'm begging you, man....

Compare to a scanner of equal capabilities and advantages - you won't
find one.

>2. Takes up a slot in the computer.
True, but it is better than if it occupied a serial port: In a typical
PC setup, one serial port is used by the modem, the other by the
mouse.

>3. Not easily portable.
True. But not everyone likes to carry scanners around.

>4. Blocked coverage.
True, as with all scanners legally sold in USA.
(If this worries you, you can always get one from Canada.)

>5. DC to daylight? Hardly.
500 kHz to 1300 MHz.

>6. Possible lightning damage to computer.
When was the last time your VCR (connected to a TV, connected to an
antenna) was damaged by a lightning? Get real. Or get insured.

7. Iconoclastic and innovative, therefore hard to accept by
conservatively minded people.

>Just my opinions. Yours may vary significantly.
Not really (with the minor additions above).

> 3. No dusting required.

Pardon me if I add....

4. Convenient for some serious radioing. When you need
to view the spectrum and make quick changes to your
listening patterns, WiNRADiO is a "bingo"! When you
need to set up and store a multitude of configurations,
it's unbeatable.

5. Synergy. Most people aren't aware of this, but you
can stack two or more WiNRADiOs in one computer and
kind of make them work together....up to eight. I
shouldn't think the hobbyist to ever consider more
than two, but two will work in tandem.

> CONS
> 1. Too expensive for what you get.

Cheap for what you get! Decent shortwave receiver; excellent
scanner; lots of automation and then there's the Spectrum Scope
and VisiTune.... Where are you going to get those goodies at
even twice the price?

> 2. Takes up a slot in the computer.

....instead of sprawled out all over your workbench, yeah.

> 3. Not easily portable.

True. But what radioist doesn't already have something that goes
portable?

> 4. Blocked coverage.

Not fair. No radio sold in the US is without blocked coverage.
It's the law. Now if you want to import one from another country,
that would be your business, I suppose.

> 5. DC to daylight? Hardly.

Well......I agree it should go lower. I like to play around
with WWVB at 60 kHz and some Navy comms down under 25 kHz,

but 500 kHz to 1.3 GHz ain't bad.

> 6. Possible lightning damage to computer.

Ummm hummm. And to your refrigerator, TV's, stereos,
burglar alarms, and benchtop radios as well.

> Just my opinions. Yours may vary significantly.

Yeah, opinions are what turns this old planet on its
axis. And no two are exactly alike.

IMHO, of course.

Ho ho ho, there sure were plenty of those, including the venerable Cobra 2000GTL and Cobra 148GTL and the Pres. Grant in its mid-life incarnation. But yeah, there were many others.

There isn't a better word for it than 'cloning', though I didn't use the term in any negative connotation. More to the point, lots of people have a certain Brand-X radio and then wonder why they don't see any information posted on it. But if they knew the one or two or even several other "clones" of that rig, then they could watch for anything said of the bunch. Likewise, one service manual often serves the purpose for the several.

Well, true.....and in that vein, the same can be said of the
BC-100XLT and BC-200XLT.....they do use the same motherboard.
The BC-100XLT has a lot of unpopulated pads....resulting in
no 800 MHz and only 100-channels.

I kind of thought better of mixing oranges and kumquats, though.
Could be too confusing..... nevertheless, a good point.

A fundamental truism. A cosmic principle. It's even
mentioned in the scriptures somewhere. I think Deuteronomy
foresaw the coming of the Mongrel Monkey Mackey and
counseled on the judicious use of Shit Lists as the best
way to chap his hide, yank his chain, hose 'im down; and
goose 'im a little, and then watch 'im dance a jig, gnash
his teeth, and snivel the blues whilst blowing snot bubbles
outa his nostrils.

Come to think of it, it was in the Book of Jasher; a work
that was inadvertently left out of the Bible centuries ago,
but nevertheless, a profound work.

:-)

I have the same problem. I had a VU210 RS huge TV antenna. It was pure junk. A guy from here who stated he worked for RS told me he would help me replace it. He never did.
I took the problem to a new RS far away from my home, but still in my town. The manager was a very pretty lady who told me that she would be glad to replace it for no charge whatsoever!
The next day, I brought in the old VU210 and got the new version (makes you wonder why they had a new version dosent it?) and everything seems to be fine now with the antenna.
All she did was look in her refernece book to find out if the manufacturer would take the anteanna back. She said they would, so it would be easy for RS too.
Anyone of the managers in my area could have done the same thing, but they are all idiots who are just learning to speak english as a second language. Heck, going to the RS in my posh part of town is like driving through Burger King. You never know what language you are about to learn!

> and you just weren't aware of the changes in the law, lately.
>
> Todd

Actually, the changes were incorporated in the quote I listed which
came directly from the Monitoring Times website.
As noted, I stated that your present scanner may be outlawed. I read
this in several areas where the comments by the propenents of this bill
had stated that no decesion had yet been made with respect to the
legality of ownership of scanners that were capable of recieving the
outlawed frequencies.
Therefore, it is obvious that they are looking at the possibility of
outlawing the scanner you currenlty own. Call this what you will, but
this is information others will not tell you because they have not
looked deep enough into all the ramifications of this proposed law.
Why take second best? Go for the gold! KILL THIS BILL ENTIRELY!

I simply am amazed at how trusting of our officials some of you are!
Maybe your democrats who fear for your party. You should be concerned.
Currently there are 6 Democrats vs 4 Republicans and one of those
Republicans is probably a Democrat in sheeps clothing. That would be
Congressman Tauzin who proposed this bill.
We all should be as angry as Hell about this bill and we should figure
that Tauzin is absolutely not trustable! HE ORIGINALLY PROPOSED BANNING
SO MUCH OF THE SPECTRUM, THERE WOULD BE LITTLE REASON TO OWN A SCANNER!
Why would you begin to trust him now simply because he has given into
some of our demands?
This bill is not unlike the liberal attempts to disarm America.
If the people begin to get upset, you simply take less from them, but
you take all you want in several bills, not just one.
If Tauzin gets enough votes to pass this awful piece of Big Brother
legislation, he will be happy to take less now because he knows that
incrementalism will work down the road and ultimately, your scanner will
be outlawed, or so much of the spectrum will be outlawed that companies
will not sell nearly so many scanners in the US because so many
frequencies will have to be removed from them.
You people who disagree need to wake up and realize that you are STILL
fighting to save the hobby, and a very important piece of your freedom:
the right to listen to whatever enters your space. Though some of this
has already been lost, still it is possible to maintain what we have
got. But, as you see now, the 1986 ECPA is simply being expanded though
under a different name possibly in the end.
Remember, this word when you consider what liberals are doing to your
country: INCREMENTALISM. It is the word used to describe the slow
process used to remove your freedoms!

Amtrack operates on the frequencies of the line whose track they are
using...IF they are on SP tracks, look for them on SP (Southern Pacific)
frequencies...160.26, 160.89 and frequencies in this range are commonly
used in the southwest.

> fill me in pleas??

Six Democrats, one turn coat (Tauzin) and 3 Republicans are moving to
outlaw many of the frequencies you presently listen to. Also, they may
outlaw your scanner since it will be able to receive the "outlawed"
frequencies. You may soon be a criminal simply because you own a
scanner with the capability to hear those frequencies.
Congress is on vacation for the rest of the year, but we should not
stop sending them mail and phone calls because they are just like votes.
They are all counted and weighed. If your congressman finds that enough
people dislike this bill, he may not want to risk his job just to vote
for it. That is why we need to really keep after them untill the bill
is dead because not enough congressmen would vote for it.

> Nothing, right? Probably not a damn thing.

I continue to listen to any frequency I want to and if and when this bill passes I'll continue to do the same. Whats the problem? You can build equipment to listen to any part of the spectrum you wish. How exactly will this bill effect your listening habits?

> Why is Uncle Bill trying to provoke Saddam?

Funny story about radioshack,
I bought a hand held scanner and the BNC connector broke on the inside, I know because I looked, my soldering gun was broke so I decided that since it was under warrenty (the one the salespeople bug you about) I decided to send it out for repair, when I brought it back to radio shach the man announced hey...You've been in this radio, the wax on the screws have screwdriver imprints on them, warrenty voided ! the place was full of people so I announced quite loudly, WHAT? RADIO SHACK SOLD ME A REFURBISHED RADIO AT THE FULL PRICE AND NEVER TOLD ME IT WAS REFURBISHED AND NOW YOUR NOT GOING TO HONOR THE EXTENDED WARRENTY??? In two weeks I got back a perfectly working scanner

Source record: 180154

Curtis,

While I appreciate the amount of work you did to post your lengthy message to the newsgroups, unfortunately your information is out of date. H.R. 2369 has been significantly amended, the changes made during committee mark-up.

>`(1) receiving transmissions in the frequencies allocated to any commercial mobile service (as defined in section 332(d),<
This has been changed to limit its scope to domestic cellular radio telecommunications service and personal communications service.
The bill, as amended, also includes all the exemptions currently in Title 18, Chapter 119, which says: "(g) It shall not be unlawful under this chapter or chapter 121 of this title for any person -
(i) to intercept or access an electronic communication made through an electronic communication system that is configured so that such electronic communication is readily accessible to the general public; (ii) to intercept any radio communication which is transmitted - (I) by any station for the use of the general public, or that relates to ships, aircraft, vehicles, or persons in distress;
(II) by any governmental, law enforcement, civil defense, private land mobile, or public safety communications system, including police and fire, readily accessible to the general public;
(III) by a station operating on an authorized frequency within the bands allocated to the amateur, citizens band, or general mobile radio services; or
(IV) by any marine or aeronautical communications system;."

While not perfect, these changes go a long way to protecting the public's ability to monitor 99 percent of the communications in which most scanner users are interested.

McDermott asks judge to silence witnesses

by James V. Grimaldi
Seattle Times Washington bureau

WASHINGTON - To fight criminal allegations in the Newt Gingrich tape scandal, Rep. Jim McDermott of Seattle has asked a U.S. District Court judge to stop witnesses from testifying before a federal grand jury, according to federal and congressional sources.

Citing an obscure clause in the U.S. Constitution, McDermott wants a federal judge to quash the subpoenas of two of his congressional aides and of James Cole, the outside special counsel hired to investigate House Speaker Gingrich's ethics violations.

A federal grand jury has subpoenaed the staff members and Cole regarding allegations that McDermott leaked the tape to three newspapers - an act the FBI and Justice Department are pursuing as a criminal violation of the Electronic Communications Privacy Act.

A transcript of the Dec. 21 recording of Gingrich and other Republicans appeared in newspapers in January.

Democrats said the tape showed Gingrich had violated terms of his plea-bargain agreement with the ethics panel, which had resulted in the speaker paying a $300,000 penalty. To avoid a full-blown ethics hearing and potentially harsher penalty, Gingrich admitted wrongdoing and promised not to conduct a media campaign to downplay his admission. Democrats say the tape showed him directing his GOP lieutenants on how to respond publicly to his admission.

In the end, special counsel Cole determined that Gingrich had in fact violated that agreement. But nothing came of it. Cole and the committee took no action and determined it was in "the best interest of the House" to stick with the original settlement.

But Republicans cried foul and said the tape itself was a criminal invasion of privacy.

John and Alice Martin of Florida admitted recording the conversation while listening to the call on a police scanner, which had zeroed in on Rep. John Boehner's cellular portion of the call. The Ohio Republican was vacationing in Florida at the time.

In April, the Martins pleaded guilty to an infraction, paid a $1,000 fine and agreed to cooperate with federal authorities if prosecutors

would not charge them with other crimes. They said they gave the tape to McDermott in January while he was ranking Democrat on the Ethics Committee investigating Gingrich.

Case has been delayed

Since the conviction of the Martins, the case has run into delays, according to a letter from Assistant Attorney General Andrew Fois to Boehner.

"Although our investigation has made progress, we cannot predict when it will be complete," Fois said. "Even investigations that appear to be straightforward from the outside may involve complex issues that take time to resolve."

Because of the delays, Boehner is preparing to file a civil lawsuit against McDermott. Boehner, chairman of the House Republican Conference, on Friday formally asked ethics authorities for permission to use campaign funds in the litigation.

The criminal case has become at least temporarily delayed as McDermott fights the subpoenas of Cole and of Charles Williams, McDermott's chief of staff, and Wilda Chisolm, his executive assistant.

Known as the "speech and debate clause," Article I, Section 6 of the Constitution states that "for any speech or debate in either House, they shall not be questioned in any other place."

The speech and debate clause has been interpreted to limit civil or criminal court cases on congressional actions. Over the years, courts have extended the speech-and-debate privilege not only to members of Congress, but also to their staffs.

The clause has been used both by those claiming heroic causes and those who eventually fell in ignominy. Speech-and-debate slowed an investigation into a committee that entered the Pentagon Papers into a hearing report, and also delayed a probe into wrongdoing by former House Ways and Means Chairman Dan Rostenkowski, D-Ill.

The provision also applies in criminal proceedings. In cases where members of Congress have been bribed for votes, prosecutors have been forced to press charges without mentioning the vote to juries. That's because an official legislative activity, such as a vote, cannot be subject to prosecution, according to Supreme Court rulings.

In the McDermott case, the question could hinge on whether his conversations with his staff and Cole are considered relevant to their congressional and legislative duties.

Congressional sources say he was heard discussing the tape with Cole. Cole, whose contract with the House has ended, declined to comment, other than to say: "The cloak of privilege extends to the staff member as well as the member of Congress."

Over the summer, McDermott asked the House general counsel to intercede on his behalf and invoke the speech-and-debate protection for Cole and the staff members. The general counsel is an office controlled by the House leadership, which voted on party lines to reject McDermott's request.

At a hearing Friday in U.S. District Court, the general counsel asked if the House could address the court on the matter. The judge has not ruled on the request.

McDermott declined to comment on his case, but he was eager to discuss the importance of the speech-and-debate clause as a key aspect of the separation of powers between the executive and legislative branches of government.

"Irrespective of my case, it is a fundamental principle of our democracy," McDermott said. "Democracy fails without the open and free speech in the Congress or Parliament. Otherwise, the executive branch could come over and clobber the Congress for something they said."

McDermott said the provision permits members of Congress to engage in a full and detailed discussion of issues. "Secrecy is never good," he said.

Top attorney hired

McDermott has hired Barry Levine, a top criminal defense attorney in Washington. Levine, a former assistant U.S. attorney, is author of, among other articles, "Responding to Subpoenas," which appears in the "Lawyer's Desk Book on White-Collar Crime."

"Mr. McDermott has always, at all times, comported himself with the highest level of rectitude, always unfailingly acted in the public interest and has been, in the House of Representatives, a beacon of morality," Levine said. "The allegations here involve important, indeed lofty principles, and nothing short of constitutional principles."

Levine also attacked Boehner for threatening to file a lawsuit.

"Mr. Boehner apparently believes that the courts are appropriate places for political disputes," Levine said. "There are those who may practice politics in a gutter. Those who do that will have to do it without Mr. McDermott."

But Boehner's attorney, Mike Carvin, said the argument that leaking the tape served a greater purpose is an "ends justifies the means defense" for actions that violated his client's privacy.

"It is wrong for a sitting congressman to commit crimes with impunity and commit unethical acts with impunity," Carvin said.

Chris won't receive the cell phone frequencies on a Rad Shack PRO-70, not even images, since that scanner doesn't cover the 800 MHz band. Now if he had spent a little more money and bought a PRO-64 or a PRO-60; well, that's a different story.
Try shopping around for a used Uniden BC800XLT, or a PRO 2006 or PRO 2030 that's been modified to receive the cell frequencies, Chris. Then try scanning 869-896 MHz and listen to what you hear.

Being that Spread Spectrum was developed by the military, that may indeed
be the case. But they would have to prove it to me first. I still will use
my ATT 9300 with confidence.

If you get a GE Super radio III, you may be able to get KMOX from St.
Louis. They were the nations first all talk station. I listened to it in
the evening as a kid in Pittsburgh. Mr. White is the guys name. A very
good show. KMOX is at 1120 AM. (The GE Super radio III usually has a tuner
that is off some. be aware of that.)

In fact, John has a hidden agenda. HE is the actual salesperson for WINRADIO. Whenever Bill posts anything with the word WINRADIO in it it's John's job to post several dozen controversial replies. This draws more attention to the original post and gets people to read the thread. This is part of a secret marketing agreement John reached with Bill and the WINRADIO people. The other part of the bargain involves John polishing Bill's boot heels with his tongue, but that's another thread.

FOR SALE

CCR708A at US, or AX700 at Japan

VHF-UHF wide-band receiver
* Spectral display scope
* 100 memories
* Receive 50-904.995 MHz
* Receiving modes, AM, NFM and WFM
* High precision PLL synthesizer
* Microprocessor controlled
* Operates on 13.8 VDC
* 120 volt 60 Hz wall transformer included
* Ideal for the service bench
* Equipped with LCD display
* Supplied with a telescoping antenna
* Audio output 1.8 Watts
* LCD window display 1 MHz, 250 kHz and 100 kHz
* Extremely well built to industry standards
* Dimensions: 2.95" (H) x 7.09" (W) x 7.09" (D)
* Weight 4.63 lbs

This unit is one years old with little usage and in very good condition

Some hire good >people and train them. When you find a good RS, keep going back to that >one.

An excellent post. And a fact missed on all those radio-shack bashing posters. If you dont like your local store shop around or go mail around. My local R/S just honored a 2 month old (90 day) price guarantee on my PRO-2045. With most R/S's you can get a 30 day same as cash / 90 day credit price guarantee in case the high ticket item you are buying goes on sale after you bought it (Dont you hate that!). It's like sucker insurance.

On the other hand I recently had the OWNER of a local independent shop go psycho on me because I tried to change the channel on their satellite TV in the store while I was waiting in line. He was all worked up because he had just spent 20 minutes terrorizing an 80 year old nursing home resident trying to hook up a non-cable ready ancient tv to her building's cable TV system. The funny part was he was only concerned with the type of antenna connectors she had, as opposed to whether or not her TV was in fact cable ready. "Well I can't make any guarantees", he kept chanting to her. I was a regular customer there, but no more.

And whadsup with the new Sprint stores crowding all the rest of the merchandise to the back of the store??? This sucks.

Pick a frequency where you can here the interference. Lock it in Manual. Turn on the fan. Disconnect the antenna. Still hear it? Get a choke filter from Radio Shack and put in the power lead to the scanner.
Did it go away when you disconnected the antenna? Put a .01 to 1 ﷺfd capacitor across the fan leads.

Try the aviation frequency guide from Radio Shack RSU, #10037877. Another
place to try would be the Flight Service Station at your local airport.

I don't have to account for it, because, I am NOT the one who did it, NOR
do I support it. Why they're doing it, is beyond me. I may be of the same

party, but I TOTALLY DISAGREE with their actions as such.

We have to ALL wake up, before it is too late.

Presenting The Dawley Homepage Weather Website!

http://www.geocities.com/ResearchTriangle/Lab/4419/

Featuring an Easy-to-Use Push-Button format designed for
high-speed use, you can obtain valuable weather
information and maps you need during this El Nino year!

Here's a sample: Go to my Maps page:

http://www.geocities.com/ResearchTriangle/Lab/4419/geo3.html

Here you will find a selection of weather maps that will let you
watch the very strong storm that is affecting the Oregon and Washington
coastline. Winds could reach 60 mph, and rain from this storm will
be heavy at times.

I have a Bearcat SPortcat SC150Y for sale, includes one nicad pack,
antenna and manual. Needs a wall charger (available from Radio SHack).
Missing the 10 channel plastic window and label, which are available
from Uniden. $100 shipped to lower 48.

Boy, when they saw you, they saw a sucker. I worked seasonal Christmas help at Rat Shack last year. Pay was $5.50 plus 7% commission. Only 10% discount on computer items, but 20% on regular merchandise.

I worked only 15-20 hours a week (I have a normal day job). I did however earn about $2000 in the 6 weeks I worked there. Granted, this was Christmas time, but still....that's about 16 bucks an hour.

You must have been offered a job at one of those Mom and Pop franchise stores.

Commtel is the "brand name" of a European electrical company called Altai.
Many of their models have/do correspond to GRE produced radios you may be
more familiar with as the PRO-xxx sold at RS.

The Commtel 216 is manufactured by Uniden and essentially a Uniden
Bearcat 3000XLT with full 25-1300MHz coverage. Unlike the BC or UBC-3000XLT
the COM216 is powered by 4 x AA batteries rather than a Nicad Pack. It has
the same number of channels (400) etc.

The PRO-26 is also manufactured by Uniden and powered by 4 x AA batteries.

>What is the voltage level considered as discharged for a NiCad cell?

0.95 - 1.00V

>Is it bad to discharge a NiCad cell below this level?

I've seen no convincing explanation or evidence that it is. The problem is that most devices use several nicad cells in series, and there is no certian way to monitor the voltage of a series pack in a way to ensure that no individual cell drops below 0V (goes into reversal) at which point damage does occur.

>Which charging
>rate is better for NiCad batteries - slow or rapid?

Slow is safer. It tends to produce larger cadmium crystals which have less surface area and perhaps slightly lower capacity per charge. Prolonged slow charge can damage a cell due to heat/outgassing too, and is a predisposing factor in the formation of internal shorts (dendrites).

Fast can be dangerous if it leads to overcharging or if used on the rare cell that cannot tolerare gith charge rates. It produces small cadmium crystals that have larger surface area and, theoretically, slightly higher capacity per charge.

Try entering a decimal point in front of the frequency you want ...
along with a decimal at the proper location in your frequency entry.
This worked for many of the older Regency scanners.

For example: .415.550 <button to activate>

>immune from evesdropping. I say nearly because no doubt eventually
>someone will build a device to monitor them. There is nothing on the
>market *that I know of* right now that you can use to listen to them.

The fundamental principles of digital spread-specturm transmissions
make it impossible to intercept the transmission unless you know the
digital spreading or frequency chipping code.

To give you an idea of the scale of this requirement, I set up a
wireless system once that used frequency-chipping spread-spectrum --
which uses a code to synchronize switching between specific frequencies
within a range of frequencies -- and the chipping code looked something
like this in hex:

AF30 2C98 7DC1 A098 17A3 2C90 FF2A A7D6

That's 128 randomly generated bits (each hex digit represents 4 bits),
which represents ... 340,282,366,920,938,463,463,374,607,431,768,211,456
different possible codes. Them's a lotta codes, no? I accidentally
transposed two digits when I jotted down the code for setting up the
remote end, and wound up puzzling for a little while why the dog-gone
thing wasn't working. Blind entry for a 32-character string is a
nuisance.

I can say with extreme confidence that spread-spectrum is !*SECURE*!,
(as secure as the secret spreading/chipping code, and since that's
tucked away in the computer memory...), and even though, like you,
I don't "know of" a monitoring device, I *seriously* doubt -- to the
point of considering it utterly ridiculous -- that there's a device
on the market that will let you listen in on arbitrary spread-spectrum-
transmitted broadcasts, or even that someone will eventually build
one.

As you can see above from the number of possible combinations, a
brute-force crack of the spreading/chipping code is ... well ...
impractical. And if you want to make it even more impractical,
just add another few bits to the code. 128 bits was just for a
wireless modem on an ethernet bridge, with no critically sensitive
data flowing over it.

Another very difficult problem that a potential spread-spectrum
decoder faces is that it's hard to tell if you've got the right
code or not. For every bit of data transmitted, there's several

other bits (often on other frequencies) providing redundancy and error correction. Bits recieved with one code look pretty much like bits recieved with any other code, until you try to make sense of it, and in order to make sense of it, you need a rough idea of what the end result should look like. Just forget it if the data is encrypted too.

Who knows, maybe the US military has such a listening device, but if they do, they're not sharing it until about a week after doomsday. After all, they're the ones who developed spread-spectrum transmission in the first place for secure military communications.

-Mike Pelletier.

4481. Here's another one for Rat shack...

I live in Manhattan, Nyc, and about 2 blocks from me is a
Rat Shack Express... anyhow, The stock battery on my Htx-202
died after 7 years of faithful service. So, I went to this store to order
a new battery for it. The manager ordered it, and told me that I would
have it in a few days. Anyhow, a few days later, I got a notice from Rat
shack Unlimeted, saying that my order would not be shipped untill May of
1998!!!!!!!!!!!!! Needless to say, I was not a happy camper, so I
decided to call thier 800 #, to see if I could find out what was
going on... A very kind young lady named Gloria checked my order, and
found it to be chock full of mistakes... the store manager had ordered
the Wrong battery! Anyhow, she corrected the problem, and sent me the
Right battery via OVERNIGHT Ups, Free of charge!!! Now, That's
customer service! why can't we ge t that from Rat Shack as the rule,
instead of the exception.... :p

: as well as other people's cellular conversations. I'm not sure if it's
: "ghosting", a phone malfunction, or what, but it is possible.

2026 scanners are double conversion, and as such, will pick up images at
21.4(or 21.6-I forget) Mhz above the frequency-21.4 is 2x the IF freq of
the radio(the 1'st IF to be exact-the 2'nd if is usually .455 Mhz).
So you might well receive cell calls by listening directly above the cell
freqs.
BTW, most 2026's are VERY easy to mod.

Bruce,

I thought I had the same problem and it took several frustrating hours to realize that the Line Out jack is for a microphone input and not an AUX input. I was confused by the labeling on the AUX button into thinking that the line out jack would generate audio.

Try connecting the line out to the mic input of your recorder, that should fix things.

Hope it helps!

Bruce,

Don't worry, I thought I had the same problem at first.

Then it occurred to me that the jack is labled Line Out so maybe it's only 'Line Level' output for a Microphone jack. I hooked it up to the microphone jack on my recorder instead of the AUX input jack and it worked no problem.

The worst part was it took me several very frustrating hours to realize this. :)

>Does anybody know the scanner laws for haveing a mobile scanner installed
in a
> car in NY and MD. Does it matter if you are a member of a Vol fire dept.
> Thanks for your help.

At the present time, New York only allows mobile scanner use for peace
officers,
permit holders, and licensed ham operators whose ham equipment incidentally
receives police frequencies. There is a bill pending in a State Assembly
subcommittee
that would remove this part of the Vehicle and Traffic Law. Another
proposed
bill would allow volunteer firefighters and EMS workers (only) to have
mobile fire
receivers.

For details, take a look at this web page, which also has a link to a good
nationwide
compilation of mobile scanner laws:

http://www.ggw.org/nf2g/laws_ny.shtml

All,

Well, the FCC is not a toothless as some like to think. Three pirate radio broadcasters here in the Tampa area were busted today, their equipment seized.

However, the FCC and U.S. Marshall's also removed from one pirate's tower several antennas and equipment belonging to a local ham club, a neighborhood watch group, an ambulance service and the county's public safety system. All of these were properly licensed, and needless to say, the folks involved are not happy campers.

The V-Tech Tropez 900DX is a good choice as well. My unit is 900Mhz
digital with caller ID in the handset. It has about a 1/4 mile range.
Cannot be picked up with a scanner...I've tried.

> I understand the IFs for the Pro-2036 are 10.8MHz and 450 kHz.
> How come I receive the image at 335.55?

The BC890XLT and PRO-2036 I tested were full of unpleasant
surprises like the one you described as well as intermod.

Here's the explanation:

When your PRO-2036 is tuned to 335.55 MHz, its local oscillator
is injecting a signal into the mixer at 324.75 (10.8 MHz lower).

The oscillator was designed to produce a signal at a lower
freq (108.25 MHz) and triple the frequency (to 324.75 MHz).
The problem is that you are not only injecting the 3rd harmonic
(324.75), but also some energy at the 4th harmonic (433 MHz).

When the 433 MHz energy is injected into the mixer, it beats (mixes)
with the 443.8 MHz ham repeater, producing a 10.8 MHz difference --
that's the IF.

Essentially, your PRO-2036 is receptive to multiple frequencies
in the mil air band:

1. the displayed freq
2. image of the displayed freq + (2 * 10.8)
3. spurious product at the (displayed freq - 10.8)/3*4 + 10.8

Hello. I have a Radio Shack PRO-2026 mobile/base scanner. This scanners looks are 8 out of 10 and it works flawlessly. It's a very nice model, and is a close relative of the PRO-2046. If your interested make me an offer. I'm not really interested in trades, but will consider them. Buyer pays shipping here's all you need to know:

FEATURES: 100 memory channels, scan and search, volume, squelch, built in speaker, priority feature, monitor feature, lock out feature, delay feature, 1 touch weather, marine, fire, air, and marine bands

COMES WITH: Mobile mounting bracket (so you can use it mobily), home stand (so you can use it as a base/home scanner), power cord, owners manual, and the original box

FREQUENCY COVERAGE: Direct access to over 30,000 frequencies, 10, 2 and 6 meter Amateur Radio, 420-450 MHz Amateur Radio, VHF-Lo, VHF-Hi, AM Aircraft, 900 and 46 MHz cordless phones, NOAA Weather Radio, government, virtually all law enforecement, UHF-Lo, UHF-Hi, UHF TV, 800 MHz stuff

Let me know!

You have it pretty much correct. The pager decoder will only turn the RX on when it thinks its code is on the channel. This is for saving the battery. When you want to monitor everything, the RX should be up all the time. With the RX up and the PD204 program running on the PC you'll get everything on the channel.

The older Bravo boards have a single pin on the connector that pulse the RX up and down. Just tie this high with a 10k resistor and your set. In the new versions there are 3 lines(A0,A1,A2). Grounding any one of these lines will turn the RX on. The new RX have great instruction in the ADVISOR service manual. Proper toggling of this lines will allow the proper filtering of different POCSAG baud rates

Your on the right track.

:the Transmitter unit 'I have also read info that certain Models because
:they are left on all the time have shorted out and caused a fire.

Amazing! All that in one sentence.
Some baby monitors are sound activated so they only tx when there is
something to listen to. That means you can scan them.
I live about 2 kilometres from a baby monitor on 27.095 Mhz FM and I
can hear it in my car while parked outside my place.

Some scanners will alter any frequencys you program in to fit the
default spacing for that section of the band. Perhaps the changed
frequency is enough to stop it picking up the monitor.

nitecapt@li.net wrote:

:I have 2 factory battery packs for my BC3000XLT. I charge them fully
:and discharge them fully. Now that they are 2 years old I get about
:1/2 the life I should out of them. Would anyone know of a better
:aftermarket or updated battery for this unit and who is selling same
:if they exist? Is there a NiMH battery for this unit?

I suggest you try a place that specialises in replacing cells. They
can probably put in higher power cells for less than the cost of a
new battery pack.

4527. Re: Poss to mod FT-50?

Newsgroup: rec.radio.scanner
Date: 1997-11-19 00:00:00 UTC
From: barryo@XfastlinkX.com.au
Message-ID: <3472319e.5041591@news.fastlink.com.au>
Source record: 179994

LA <artz@ll.mit.edu> wrote:

:x-no-archive: yes
:(because the FCC has banned scanner service manuals)
:Daniel and Cheryl Warren wrote:
:>
:> The Yaesu FT-50 dual band HT has extended RX capability up to 900 Mhz,
:> cellular blocked.
:>
:> Is there an international version or mod to restore full RX?
:>
:> Thanks,
:>
:> Dan
:
:
:Yes, there is a mod that will restore full receive, including the full
:cellular phone band (all the way to 999 MHz, no gaps).
:
:Go to:
:
:http://members.aol.com/aeimn/ft50/index.htm
:
:There are full instructions, complete with pictures and all. You can do
:the mod yourself. Follow the instructions carefully and USE A VERY SMALL
:SOLDERING IRON!!!!!! My suggestion on removing that #1 chip resistor is
:to only lift the one leg of it so that the connection is broken, leaving
:it in place. There is also a solder blob that gets wicked out below it.
:
:If you have the ADMS-1C software, save a copy of the template file, so
:if you screw up, you have it as a backup if need be, because the CPU
:will have to be reset by you (as will say on the display of the HT:
:"BAND=FREE".) Again, follow the instructions. This is known as the
:"freeband" mod.
:
:My FT-50 is modded, and it works great. There is also a way (as I found
:on that website) on being able to "fool" the radio so that it will scan
:the high UHF frequencys in 15 KHz steps as well. That trick also works,
:and works well.
:
:I am going to caution you, however on entering any frequency between 869
:to 894 mhz. It is a federal offense to listen in. Just make sure there
:is no agent from the Bureau of Alcohol, Tobacco, Firearms, Refrigerants
:and Scanners, or the Federal Radio Receiver Police around when or if you

:are brave enough to push 8-6-9-0-0-0.

I live in a place where 869.000 is not part of the cellular range.
It would not matter anyway since it is quite legal to enter cellular
frequencys in our new scanners. I would need to be brave to do the
mod but not to use it.

4532. YOUR SCANNER MAY BECOME ILLEGAL!

Newsgroup: rec.radio.scanner
Date: 1997-11-19 00:00:00 UTC
From: jtward01@aol.com
Message-ID: <19971119060001.BAA06237@ladder01.news.aol.com>
Source record: 179999

All,

H.R. 2369, as it is now written after being amended, DOES NOT make it illegal to listen to anything that it is not already illegal to monitor above 30 MHz except PCS - personal communications system devices - those cellphone, pager, e-mail combination devices. The bill DOES require that frequencies used by PCS be deleted from future scanners, but since PCS uses digital transmissions and can't be monitored by scanners anyway, that's not a great loss.

The bill DOES NOT make existing scanners that cover the PCS frequencies illegal to own, anymore than the ECPA made existing cellular capable scanners illegal to own. If you already have 'em, you can keep 'em.

There is some question that H.R. 2369 MAY inadvertantly impact the legal monitoring of certain shortwave utility services. It also MAY inadvertantly make it more difficult for the manufacturers to produce a scanner capable of monitoring digital public safety radio systems.

I spent more than an hour on the phone today with Tauzin's legislative affairs aide and she promised to clarify these issues and Tauzin has promised that if additional re-wording of the bill is needed it will be done.

Tauzin has gone a long way toward satisfying our concerns with the original bill - much further than I ever expected him to. I have no reason to believe that he isn't willing to continue to work with us.

Is it time to sit back and relax and not worry about the bill? No, of course not. There are still some questions to be answered, and possible clarifications to be made. But Tauzin's demonstrated willingness to work with us clearly shows that the inflammatory rhetoric being spread by some folks on this newsgroup and elsewhere is not appropriate, and may well be counter-productiive.

Jason,

You don't know anything about scanners if you think this is too expensive. It's a damn good price for a VG condition scanner that will do cellular. This model was very popular. There are other 2026's much more expensive on rec.radio.swap. So before you open your mouth and stick your entire leg in, know what you're talking about.

If this wasn't a totally open newgroup my tone of words would have been written more to suit you!!

(By the way, thank you Eddie Kosloski for your honest opinion!!)

Sure, you've seen them SELLING 386's for $500+, but you haven't seen anyone in their right mind BUYING them for that. Jeez.
--

Check your classifieds. I have seen people selling 386's for $500+ so anything is possible. One mans' trash.....

FYI: A good pentium 200 system should start at $2500 (including 17" monitor) and go up from there. Anything sold cheaper isn't worth the cost of blowing up.

Maybe YOU should check the classifieds. See what you will pay for a new Dell 200MMX. The 17" monitor will kick it up a bit, but in the age of 233-300MHz, $2500 for a 200MHz is a bit much. Sounds like you are trying to justify your own prices. If you throw in lots of consulting and such for that $2500, then maybe that's not such a bad deal, but for pure hardware...too much.

Who has control of the congress? What does congress do?
It is really silly to argue over Republican or Democrat! Both of those
parties (really the SAME party) have been in the congress and been
President. Things continue to get worse. When are people going to wake
up and stop giving them more chances. Vote for one of the OTHER
parties. There are so many now, that there must be ONE to your liking.

Go look up the word "Liberal" in the dictionary. You, just like many
others, are using the word to mean "the Democrats" when that word does
not fit them OR the Republicans. A "Liberal" does not take away
people's rights, or "keep them off the streets" as you say. While you
are at it, look up the word Conservative too. (before you use THAT term
incorrectly as well.)

4547. Proper usage of NiCad batteries

> > LIBERALS LOVE TO TAKE THINGS FROM PEOPLE!

Liberal: 1) Having, expressing, or following views that favor civil liberties and social progress. 2) Having, expressing, or following views that favor the freedom of individuals to act or express themselves in a manner of their own choosing.

By definition of a "Liberal" your statement makes no sense! It is contradictory! By definition, I think MOST people would like to be called a "Liberal"! It is the opposite of being, say, a Communist Dictator.

Stop referring to Democrats as "Liberals"! The only party that I know of that fits the word Liberal, would be the Libertarian Party. They don't want to take ANYthing away from us. You would be able to listen to any freqeuncy you want on your scanner, under a Liberal Party.

No one should say anything that they would be ashamed for anyone to hear. Also, if you send someone an e-mail or mail through the post office, it becomes the property of the receiver. Especially if it was not requested. If I sent you a death threat, I'm sure you would feel differently about it being a "private" message, and would show it to the police.

I would suggest you do not send replies via e-mail, but rather POST them as this is how newsgroups work. And if you feel embarassed to say what you want on a newsgroup, you shouldn't be saying it at all!

I am new to the scanner experience and have a Radio Shack PRO 60 with the original short antenna. If I buy an indoor antenna or a small outdoor one (I have a 2nd story porch to mount it on) will I get significantly better reception. Which of the 2 choices is the better; what antenna would you recommend I buy ? I have read the FAQ and have not found an answer to the indoor vs. outdoor question. Thanks in advance - Ray

Hi George,
Seeing as how you appear to be into the high-end radios,
you should look into the Alinco DJ-X10, AOR AR8000, iCOM
IC-R10, Welz WS2000 and Yupiteru MVT-9000.
The MVT-7100/7200 are the generation previous to the
MVT-9000. Same goes for the R1 compared to the R10. I
would suggest staying away from the R1. It is a 'niche'
radio and only appeals to a small number of people.
Also, it has some large drawbacks that make it suitable
only as a second, third, etc. radio.
Since you are a beginner, I would like to point out
that all these radios are communications receivers and
not 'scanners'(like those offered from Radio Shack and
Uniden). There is a difference between the two. Be sure
you aren't getting in over your head. For a little more
education on this, feel free to stop by my web page
Picking A Scanner/Receiver :
http://www.qsl.net/n2mca/PICKRECV.HTM
I have reviews on all these radios(except the R1) at
my web site and you would do well to stop by and look
around. Go to my home page below and follow the radio
monitoring link.
Good luck and happy reading!

Strong signals,

> Thanks.

My battery cycler manual for my R/C aircraft batteries (also AA)
recommends a cell be discharged to 1.1 volts. It says beyond this the
cell may reverse polarity thus destroying it.
A slow charge is always better. Heat destroys nicads. Rapid charging
creates much more heat energy than a slow charge.

My company sold a PRO-2006 via the Internet about two months ago. The first person to reply bought it. We had at least 6 others who offered to send a money order or bank check in the event that the first person changed his mind. For two weeks afterwards, we received other inquiries. It was amazing to see the interest in the PRO-2006.

Anyone who snickers about selling one of these receivers hasn't seen how quickly they are grabbed by folks who know their value and appreciate a top quality receiver.

I've seen this "sky" person respond several times like this. He or she must
not know the value of these radios. I sold a 2006 a few months ago for
$300. That was my asking price and I recieved it within a couple hours from
the time I posted it on the buliten board of our local grocery store. I
should have asked for more.
Sure people may sell them for less, but why would you want to give one of
these away for less?

I found on the web (actually I think somebody advertised it here) a keyboard trick which allows this scanner to search through the military air band (among others). My question is, will I ever hear anything with this mod? I understand mil air comms are AM mode. While this scanner receives civ air (also AM), will the scanner receive AM in the mil air region? Can the scanner detect the type of modulation of a received signal and appropriately select AM/FM, or is this hard wired (so to speak) in the cpu (i.e., 108-137 Mhz are AM, and everything else FM)? The mod does work, I live near a mil. air base, but haven't had the time to really play with it much yet. Any help is appreciated.

Dear radio hobby club volunteer:

FBOM Magazine Online, the interactive version of FBOM Magazine, is offering to post information about your non-profit radio club's hamfests, jamborees and other large radio hobby-related events free of charge on our web site <http://n-lemma.com/FBOM/>.

The only strings attatched are that your club is a non-profit organization and you can use some extra publicity.

These listings will be continously updated. As an added incentive for others to rely on the listings, we will contact you 2 weeks prior to your event and put a "Confirmed or not confirmed by FBOM" stamp on the listing.

Please send us information about your club's fundraising events as soon as possible. You can also use a form on the our web site. Simply click any references to "Hamfest listings."

For any questions, email the Publisher, Eric Bond, N9VJG <n9vjg@n-lemma.com> or the Webitor, Chuck Brown, N9UPO <n9upo@n-lemma.com>.

Feel free to spread the word to other radio hobby-related clubs and organizations--especially those who do not have internet access. Our mailing address:

FBOM
P.O. Box 7711
Westchester, IL 60154-7711

Thank you and 73s

Eric Bond, N9VJG W.C./NCI-1099

The (unofficial) Uniden BC3000xlt web page has been updated...

New features include a chat room for owners of the BC3000xlt (but all scanner enthusiasts are welcome!) to come together and trade frequencies, tips, tricks, and discuss the hobby in general. All you need is a JAVA-enabled browser.

Also available -- specifications, keypad tricks and tips, my personal setup (including frequencies), links to other scanner sites, and a page of different antenna setups people have tried and reported on.

http://www.universe.digex.net/~bnr/3000.html

Enjoy!

Source record: 179882
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Hi,

I recently bought a Yupiteru MVT-7100 and as I am new to scanners I am not sure what to expect in the way of frequency stability and accuracy, although I do have experience of HF radio.

I have noticed that when I tune to an HF station using USB or LSB there is a frequency offset from the published frequency, which I was expecting. However, the amount of offset is different for USB and LSB and drifts by about 1KHz over the first half hour to hour after switch on. Looks like the injected carrier drifting relative to the pass band and may be a temperrature effect.

Also, if I set the frequency step to 1KHz and tune to the VHF aircraft band, the maximum signal strength occurs when tuned up to 5 KHz from the published freqency (some above, some below).

In general I am pleased with my new kit, but I would like to hear your comments and experiences with the 7100 or other scanners, in case I have got a below par example.

Thanks in advance,

Nigel.

HA HA HA HA! Now that's FUNNY!

Let me get this straight. I buy this radio from you, for $900 and then take it to my local 2 way shop and tell him that I want to have this TRANSCEIVER programmed for the public safety systems in use here (which are Motorola systems by the way) and he is just going to smile and give me the tools necessary to wreak havoc on the dispatcher of my choice?

BZZZZT!!! But thank you for playing.....

The 2 way dealer is going to ask himself one question: Is this guy stoned, or just plain stupid?

I see one of three possible endings here:

1. He is going to tell me where I can stick this $900 radio and to keep it there until I provide something called an FCC LICENSE (maybe you have heard of it?) authorizing me to transmit on these frequencies.

-or-

2. He is going to smile (because I must have escaped from the looney bin) and go into the back to call the authorities.

-or-

3. He is going to smile and say "No problem. That'll be $2000." (D'OH!)

I guess everything really is bigger in Texas (including mountains of B.S. and people's imaginations).

if you think being a liberal is bad , think again, only use your own
head not some propaganda mouthpiece, remember these words: liberal
goverments scare me, conservative goverments scare the hell out of me.
the anti-liberal propagada messages are to promote the right wing views
of ultra conservative religionest who want to destroy the parts of the U
S constitution that protects freedom of religion. their agenda is to
make laws that supports only there religion not anyones . what is their
religion? maybe not yours. liberals have no such secret agenda. liberals
means liberty: simple as that

Source record: 179901

Nicads thrive on hard use, wimp out on occasional use and half cycling. Treat em bad....they like it. If you don't have a "conditioning" charger, leave the radio on overnight to kill them dead before charging. Try not to top up the charge very often; it makes them "lazy".

My father in law and I bought the same cordless drill a few years ago. Mine got used every day assembling furniture--2-3 charge cycles every day, sometimes more. My batteries got so hot that they were uncomfortable to hold on to, and the charger refused to charge them.(stupid Makita charger---aaargh!)
Today, my drill is completely, unbelievably worn out, but the batteries are still good, and deliver full power to the end. His, however, in occasional use, is still shiny, but his batteries are shot! I gave him my batteries when I threw my drill out. BTW, nicads are unbelievably cheap when bought as components from a battery shop (the grungy kind found in the industrial district.) Often the supplier will rebuild your existing pack for very reasonable rates!

So treat em bad and enjoy!

Tim

Actually, I think he works for a dealer that stocks FRS. I've seen his
posts every now and then in this newsgroup, and the price is invariably
"$249.95 including shipping." That must be the magic number at his
company.

Actually, for a more objective view from a dealer, I prefer
www.frsradios.com. It allows comparison of a wide variety of radios,
not just one.

Source record: 179910

I have to drive 30 miles to the nearest RS. In that town there are 2. They are different as night and day.
The one in the mall is full of the "droids" so often reffered to in this group. One time, when I had a defective 2-way head set, the manager was positive I had the batteries in backwards. (they ran on 9-volt batteries) He spent several minutes trying to "correct" the problem, then finally gave in and replaced the radios. After the exchange I told him that it was probably the guy that had them before me that broke them. He told me that they were new radios, no one else had them before me. So I popped the bat covers back off and showed him were the guy had etched his name and address inside. What a dork!
At the other RS they know what they are doing. Very helpful!

One more thing, I haven't seen the newest mobile scanner(the one that kind of replaced the 2026) But all the other mobiles have had the (dnc?) hook-up for the ant. but their mag mount ant has a (motarola?) plug. So if you buy their radio and their ant. you need to buy an adapter or replacement plug. This has always bugged me.

Kevin

I'm certainly glad I bought a PRO-64 and a Uniden Trunk Tracker this week, for next week they may be outlawed.
Do Radio Shack and Uniden know about this "conspiracy" to ban scanners?
Gee, I would think the folks in Fort Worth would be quite upset if they knew that their major product line was going to be outlawed. Think of all the money that would be lost from sales of scanners to potential "lawbreakers"!
All kidding aside, haven't we had enough of the "scanner paranoia" in this NG?

>FYI: A good pentium 200 system should start at $2500 (including 17"
>monitor) and go up from there. Anything sold cheaper isn't worth the cost
>of blowing up.

Hogwash.

Dell Dimension M200a: $1849
Gateway G6-233: $1999
Micron Millennia Mme200: $2099

These are all loaded systems from reputable manufacturers. If you
shop around, or settle for a few less features, you can easily beat
these prices from any of the clone dealers.

Anyone who'd "blow up" one of the above listed systems shouldn't be
allowed out of the house without a keeper.

4623. Help finding laws

Newsgroup: rec.radio.scanner
Date: 1997-11-20 00:00:00 UTC
From: skuter@tcgcs.com
Message-ID: <3473a686.109075263@news.tcgcs.com>
Source record: 180097

I am looking for any on-line source that would list the federal regs.
relating to scanner use.

I've searched the Code of Federal Regulations at
http://www.access.gpo.gov/nara/cfr/cfr-table-search.html
and I was unable to find any sections dealing specifically with
scanners. The only one I found was 47CFR15.121 which prohibits
listening to cellular phones.

I'm trying to find regulations relating to the following "laws":

"It is illegal to reveal the contents of any transmission
heard to anyone not a party to the transmission"

"It is illegal to listen to cordless telephone conversations"

"It is illegal to use the contents of any transmission heard
for personal gain"

"It is ....
in the commission of any crime"

I believe that these are based primarilly on the Telecommunications
Acts of 1933(?) and 1986, but they should be cited in the CFR to be
law.

I have heard that the above statements are law, and see them mentioned
on this group, but I would like to know where they are written.

Please, no replies about them being laws because "I know they are", or
about the "stinkin' guvernmint meddlen in mu biznus".

Thanks for any and all help.

talking about cordless phones, I used my panasonic cordless (46-49
MHz) with "secure" mode on. I tried to pick up the signal, but it
did not work (it worked, but it had a very lousy white noise). It's
not digital so I don't know what's going on.

4625. Motorola 800MHz trunked radios

Newsgroup: rec.radio.scanner
Date: 1997-11-20 00:00:00 UTC
From: Ken Jones <KennethKJones@sprintmail.com>
Message-ID: <3473D313.5C93@sprintmail.com>
Source record: 180099
Cross-posted to: rec.radio.swap,rec.radio.scanner

I am looking to find a 800MHz Motorola trunked radio. I know that there are many different kinds out there with many many different features. I am looking for one that will handle several different systems and many groups on each system. The radio must also be 'securenet' capable.

I am a police officer who does work in several different counties here in Texas. I ave several different radio's now (county owned) and have permission to purchase my own, and have it programmed to replace the numerous radio's. I plan on having one system programmed bye one radio shop, and another system programmed by another.

My question is, 1st is this possible and 2nd, which Motorola trunked radio has the widest system/group capability? What is the approx cost of this radio?

Any help that can be provided will be greatly appreciated.

//Ken//

I don't know why you'd want to try..... The PRO-2032 already
IS a 200-ch scanner.

You can, however, turn it into 400, 3200, 6400, or even
12,800-channels.

On my BC890XLT, it takes two connections, one from the scanner LINE to the tape recorder MIC, and one from the scanner AUX to tape recorder REM. The AUX to REM notifies the tape recorder to start and stop recording, and the sound travels from the LINE to the MIC. The tape recorder must be in the RECORD mode and the channels you want to record must have LINE on the display, by hitting the AUX button on the front of the scanner. I would think the setup on the 895 would be very similar. Also, if your tape recorder has VOX, turn it off (disable).

Yo Glennifer? You out there, son?

I wanted to show you where the cow ate the cabbage before I slap you back on my Shit List, .

Lookee here, slick. I found me some interesting statistics about you and the way you post, you old reprobate! But just in case I'm wrong about you, I've also got a nice warm fuzzy for you to ponder and pontificate.

First, we find 38 posts from you in less than a month. ALL of them are replies - none are originals. Then we find that all but two are snide, obnoxious, inflammatory, inane, and off topic. Significant that you seem to have some kind of a perverted fixation on me, possibly deep seated libido related like your cousin, Booger Picker Mackey. But he's another story....

The fundamental conclusion is that you have no interest in scanners and scanning.

So, my dear lad, I wonder about your motivation and reason for existence. However.....fair man that I am.....I'll give you the benefit of the doubt for a minute and make you an offer. I see where the WiNRADiO threads really captured your loving attentions.....kind of tripped your trigger and turned you on. Soooooo...tell ya what - I'll sell you one at a discount from the discount....say $484 + $15 S&H, offer good through the month of November. And on top of that, I'll give you a 7-day Satisfaction or Money Back policy, good if you return the merchandise in resaleable condition with no damage, abuse, marring, scarring, or obvious use. Whaddya say, pal? Time to go poo-poo or get off the pot. Here's a reference for you if you need more information:

http://204.210.11.126/bcheek/winradio.htm

Meanwhile, below is the queue of your posts over the last four weeks. Examine them and their contents for the proof of the pudding.

You've got to bear in mind, the FCC licenses various frequencies to cover a specific area. These same freqs are used often in adjacent areas. In trying to receive "out of area" broadcasts, you will likely be exposed to interferance from other radio stations, both local and more distant. The problem is much worse at night. Most quality home radios are sensitive enough to receive well. What you need is the capability to add an external antenna to a radio. Again, this will allow you to hear more distant stations, but there are a number on any one frequency, so be advised.

Ed

4643. ICR10 receive

Newsgroup: rec.radio.scanner
Date: 1997-11-20 00:00:00 UTC
From: edgo@lis.net.au
Message-ID: <34781520.44354880@news.lis.net.au>
Source record: 180117

I have had an ICR10 for almost a year.
I bought it in Australia (I think the first country where it was available ...outside Japan) in November 1996.
Quite happy with it except for receive in the VHF bands....especially 78-79 mhz (the local emergency agency freqs)
Finally got around to returning it to the dealer, recently. (ok...I have too many scanners)
The dealer tells me that my problem is not unusual.....others have been having the same receive difficulties.
I have not noted any similar complaints on this ng and tend to believe that the problem is only related to early production models (Australian sales).
The receive problem seems to be on VHF only and shows up when running alongside my Welz 1000 and Yupi 7000.....both of which perform remarkably well on the same band. The difference is that the Icom sometimes only presents as a break in squelch what the others give as clear signals.
Anyone else have the same problem....in any country?
BTW...don't tell me about the slow scan rate.....I do not find that a problem.

As a matter of interest,Icom Australia has now had the bloody thing for over a month.......
Brian

All of the laws you seek are covered via this web page:

http://www.ggw.org/nf2g/legal.shtml

>I'm trying to find regulations relating to the following "laws":
>
> "It is illegal to reveal the contents of any transmission
>heard to anyone not a party to the transmission"

Section 705 of the Communications Act of 1934.

> "It is illegal to listen to cordless telephone conversations"

TDDRA, enacted 1994 and included in ECPA as of that time.

> "It is illegal to use the contents of any transmission heard
>for personal gain"

Section 705 of the Communications Act of 1934.

> "It is ....
>in the commission of any crime"

Local laws in various states.

4649. Let's Ignore John Mackey From Now On

Newsgroup: rec.radio.scanner
Date: 1997-11-21 00:00:00 UTC
From: Phil <psmalley@az-mta.honeywell.com>
Message-ID: <01bcf6c7$ff7f7840$667391a4@PSmalley95.iac.honeywell.com>
Source record: 179773
Body handling: HTML body converted to readable text

This is a multi-part message in MIME format.

------=_NextPart_000_01BCF68D.5320A040

I have been reading the John Mackey threads lately, and I have posted a similar message as a reply to the Kill Filter nonsense, but it's buried under all the other B.S. so I will post a new message so everyone can read it.

In the threads John has been asked again and again to provide proof that he has posted anything useful to the scanner community. Again, and again, he swears to "get right to it" and produces that same lame pager post - which is in response to a ham radio question, NOT scanners. So I did a little research of my own on dejanews, which I would now like to share:

A search filter of author: John Mackey--KA0SSF
Groups: *.scanner

Returned 403 unique postings

Any useful posts? Actually there were (surprised? I was). There were 4 posts relating to ham radio(which has no relevance to rec.radio.scanner) and 4 postings that related to scanning. 8 postings out of 403 since 11/96 or a whopping 1.9 percent.

Which leaves 395 postings of useless shit. I'm sorry to use that word, but it's the only one that fits. About 80% was a result of a posting (usually on topic, although there were some flamers) from Bill Cheek. The other 20% were replies to people such as myself who were trying to get the moron to shut his yap. I'm sorry but this is just outright abuse. If he abused his ham repeaters like he abuses this NG he would have been fined into poverty long ago.

Which leads me to one undeniable conclusion. The only time John Mackey makes a nuisance of himself is when we respond to his B.S., just like that Emilio twit. So let's just ignore the idiot and concentrate on what this NG is all about: Scanning!

In one of his posts, he responded to a posting like this one saying "That's all I want, is for people to leave me alone and make this NG a nice place!"

Let's give him his wish.

So long John, and good riddance. Don't bother to reply. I will ignore it and you from now on.

From: jay <jay777@mindspring.com>
Message-ID: <347658F6.35D@mindspring.com>
Source record: 179781

Hi all, I'm having a small problem with my pocsag signal decoder. Actually I'm not sure if it's supposed to be doing this or not, but here goes. I've got a SC150y scanner with the descriminator out. tapped to a 741 op amp comparator, the circuit is basically the same schematic that comes with the PD-204 package, except I've shorted R2 and opened R3. Anyway, the problem is that I get garbage on the screen. Just random characters that the program says is coming from different RICs, except it's not; or it will get the RIC right but not what was sent, it just displays random characters. Consequently the decoding program says that it's 100% (or high 90s) accurate, and the digital pulses coming off the output of the op amp look good on a scope. Does anyone know what could be causing this, and/or know a solution?

Firefighter Line of Duty Death

The New Salem Volunteer Fire Department (Station 29)
located in Menallen Township, Fayette County,
Pennsylvania lost one of its members in a Line of
Duty Death on Friday, November 14, 1997. Firefighter
Scott Vrabel, Age 26, was killed as a result of a
vehicle accident involving the fire engine he was
operating while enroute to an emergency call. A
full fire department funeral was conducted on Tuesday,
November 18, 1997 at 1100 hours at the Dearth Funeral
Home, New Salem, Pennsylvania.

The Final Alarm was sounded on 33.70 Mhz on
Tuesday, November 18, 1997 at 1225:40 hours.

If you monitored the transmission please e-mail and
let our agency know. Fayette County 911 is curious
to see how large an area received this radio transmission.

(The wave file containing this radio transmission is
attached to this document 400 KB approximately 30
seconds)

Final Alarm announcement as broadcast by Fayette
County 911

Fayette County Attention All Companies the Last Alarm
is now being sounded for Firefighter Scott Vrabel of
the New Salem Volunteer Fire Department Station 29,
who died on November 14, 1997 as a result of injuries
sustained in the line of duty while responding to an
alarm on this date. May god rest his soul.
-Dispatcher Bruce D. King
```

A special thanks is extended to all Firefighters and
Fire Departments that provided standby coverage for
the New Salem Volunteer Fire Department during their
time of need.

Never saw it, I will handle that this weekend.

> Who's the fool?

YOU are.

Are you going to come up with a real ID or continue to use the
chicken/fake ID you are using now?

DO YOU WANT TO MAKE BUCKS FAST???--AND NO ONE LOSES . . .
Of course you do, we all do !!! Here's how to do so with little effort, and, yes IT'S LEGAL.

Some people make things happen
Some watch things happen
While others wonder what has happened

This is the easiest way that you can make a buck. Think how excited you'll be to open up your mailbox day after day! Will it be $50 in dollar bills? or $5,000? Start making your plans, because it can happen to you.

DON'T PASS UP THIS ONCE IN A LIFETIME OPPORTUNITY!!! (I'm glad I didn't)

Like you're doing now, I was checking out newsgroups and came across an article similar to this that said you could make thousands of dollars within weeks, with only an initial investment of $6.00! So I thought, "Yeah, right, this must be a scam!", but, like most of us, I was curious; I kept reading.

Anyway, it said that if you send $1.00 to each of the 6 names and addresses stated in the article, you could make thousands in a very short period of time. You then place your own name and address at the bottom of the list at #6, and post the article to at least 200 newsgroups.(There are about 22,000.)

No catch, that was it. After thinking much about it, I came to the conclusion that this could not be a scam (but, if it was, only scamed out of $6 , I could afford it.)

Even though the investment was a measly $6, I had three questions that needed to be answered before I could get involved in this sort of thing. Just like you, I was skeptical, or thought it might take too much work or something.

1. Is this really legal? . . . I called a lawyer first. This lawyer friend was a little unbelieving that I would actually make any money but he said it WAS LEGAL if I wanted to try it. I told him it sounded a lot like a chain letter but the details of the system (SEE BELOW) actually made it a legitimate legal business.

2. Would the Post Office be ok with this . . . I called them: 1-800-725-2161 and they confirmed THIS IS ABSOLUTELY LEGAL! (See Title 18,h sections 1302 NS 1341 of Postal Lottery Laws). This clarifies the program of collecting names and addresses for a mailing list.

3. Is this moral? Well, everyone who sends me a buck has a good chance of getting A LOT of money . . . a much better chance than buying a lottery ticket!!! In the end it looks to me like no one loses, we help each other move ahead.

So, having these questions answered, I invested EXACTLY $7.92 ... six $1.00 bills and six 32 cent postage stamps . . . and boy am I glad I did !!!

Within 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But the money just continued coming in. In my first week, I made about $20.00 to $30.00 dollars. By the end of the second week I had a mad total of $1,000.00 !!!!! In the third week I had over $10,000.00 and it was still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in . . . It's certainly worth $6.00 and 6 stamps !!!

So now I'm reposting this so I can make even more money! (and helping you to make a lot of money.) The *ONLY* thing stopping *ANYONE* from increasing their own bank account is pure laziness ! It took me all of 5 MINUTES to print this out, follow the directions, and begin posting to newsgroups. It took me a mere 45 minutes to post to over 200 newsgroups. And for this GRAND TOTAL investment of $7.92 (US) and under ONE HOUR of my time, I have reaped an incredible amount of money --like nothing I've ever even heard of anywhere before ! Enough said, time to start !

Let me tell you HOW this works, and most importantly, WHY it works. Also, make sure you print a copy of this article now, so you can get the information off of it when you need it. The process is very simple and consists of THREE easy steps:
STEP 1--Send the 6 people on the list a single dollar each.
STEP 2--Put your name and address on the list in position 6.
STEP 3--Post this amended letter to 200 (or more!) Newsgroups.

==========
HOW IT WORKS
==========

STEP 1:

Get 6 separate pieces of paper and write the following on each piece of paper:

PLEASE ADD ME TO YOUR MAILING LIST.
$1 US DOLLAR PROCESSING FEE IS INCLUDED.

(This is the key as this is what makes it legal since you are paying for and later offfering a service.)

Now get 6 $1.00 bills and place ONE bill inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope to prevent theft/robbery. Then, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase and a U.S. $1.00 bill. Now send to:

#1
JA Gualtieri
45-350 Columbia St. W.
Waterloo, ON, Canada N2L 6G3

#2
Andrew Wiggin

PO BOX 424
East Setauket, NY 11733

#3
Ashle
347 Jamboree
Manchester, MO 63021

#4
The Mom
4464 Castelar Street, #320
San Diego, CA 92107

#5
Chris Watson
1138 Indian Road
Virginia Beach, VA 23451

#6
Virgil
3538 West 12th Street
Trainer, PA 19061-5301

STEP 2: Now delete name #1, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR name as number 6 on the list. (If you want to remain anonymous, put a nickname, but the address MUST be correct, or you won't receive your dollars in the mail.)

STEP 3: Now post your amended article to at least 200 newsgroups. Remember, 200 postings is just a guideline. The more you post, the more money you make! As you might know, it's not that difficult to post to news groups. So, you don't know HOW to post in the news groups? Well, do exactly the following:

HOW TO POST TO NEWSGROUPS FAST WITH YOUR WEB BROWSER:

Highlight and COPY(Ctrl-C) the text of this posted message and PASTE(Ctrl-V) it into a plain text editor (like Wordpad or WordPerfect) and save it. After you have made the necessary changes that are stated above, simply select a newsgroup then COPY(Ctrl-C) and PASTE(Ctrl-V) the text into the message composition window of the newsgroup, and post it!

GENERAL NOTES ON POSTING: A nice page where you'll find all the newsgroups if you want help is http://www.liszt.com/ (When you go to the home page, click on the link 'Newsgroup Directory'). But I don't think you'll have any problem posting because it's very easy once you've found the newsgroups. All these web browsers are similar. It doesn't matter which one you have (But it makes it very easy if you have Netscape Navigator 3.0 or later. You may download it from the Internet if you don't have it.) You just have to remember the basic steps, stated below.

BASIC STEPS FOR POSTING:
1. Find a newsgroup and you click on it.
2. You click on 'POST AN/NEW ARTICLE' or 'TO NEWS' or anything else similar to

these.
3. You type your flashy headline in the subject box.
4. Now, either you attach the file containing your amended letter, or you PASTE the letter.(You have to COPY it from the text editor, of course, from before.)
5. Finally, you click on 'SEND' or 'POST' or 'OK', whatever is there.

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200

That's it! You will begin receiving money from around the world within day's! You may eventually want to rent a P.O. Box due to the large amount of mail you receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it.

JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.

==========
Now the WHY part:
==========
Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625.00! With a original investment of only $6.00! AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30!

So lets put those figures at just 15 responses you get. Here is what you will make:

at #6 $15.00

at #5 $225.00

at #4 $3,375.00

at #3 $50,625.00

at #2 $759,375.00

at #1 $11,390,625.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is, do you realize that thousands of people all over the world are joining the internet and reading these articles everyday, JUST LIKE YOU are now!! So can

you afford $6.00 and see if it really works?? I think so...

People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will work. We all just have to be honest and help each other get ahead.

REMEMBER-HONESTY IS THE BEST POLICY. WHAT ARE 6 DOLLARS TO YOU? YOU DON'T NEED TO CHEAT THIS IDEA TO MAKE MONEY!!! IF YOU NEEDTHE $6, I'M SURE ANY OF THE PEOPLE ON THE LIST AHEAD OF YOU WOULD SEND YOU $6 IN DOLLAR BILLS TO GET GOING--YOU HAVE NOTHING TO LOSE !!

** We will monitor the program and if we find you have cheated by not sending your money to your five recipients, we will just dump you out of the system. Come on folks, let's work together and make this work for everyone.

GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH.

Please remember to declare your extra income. Thanks once again...

Having some problems with Wintone, that I thought I should pass on to you all...

Sent the guy payment back in October (15th) for an E-mail registration number, and a copy of the program (on disk). I have never received either.

After 3 weeks I sent an E-mail asking for either an explanation - or the product. No reply. Sent another E-mail last week - same thing - no response.

Add this guy to your hall of shame...

John

>
> //Ken//
Ken, you best check with Motorola sales/service to get a correct
answere. These scanner NGs are full of bogus and time wasting comments.
Check with the radio man that services you agency's radios. These guys
are straight shooters and can be a great help in these matters.
But my probly incorrect maby bogus opinion sez it can't be done. As the
trunking radios are programmed to set GROUPS of freqs. and the 800 mhz
groups/agencys are spread too far apart for one radio to handle what
with different data channels and such.

Well Ray if you have the money and the short time it takes to install a roof mounted antenna, I would highly recomend it. A basic all band scanner antenna and a 5 foot mast will do nicely, depending on how far you have to run the cable, you can buy it in 50 or 100 foot lengths with the ends already on it from the factory. Now I know everyone is a little upset with Radio Shack, but you can get all of your equipment that you need there and have it setup and ready to scan in a couple of hours.

> used cellular frequencies. I Have an old Bearcat 810, 40 channel, but
> it's cellular ready, just need the actual frequencies, if possible.
>
>

Well, you're going to need more than 40 channels. I'm not familiar with the
unit, so I don't know if you have a search function, but if you do just set
the search to scan 869 to 896 mhz and you'll catch every dull boring cell
call within range. If you're like me you'll like it for about a week. Then
it just gets old. If not, visit
http://intercall.com/~neuhaus/fccindex/cellfreq.html which lists the
frequencies themselves (there are roughly 1000 of them!)

LEGAL DISCLAIMER:
Listening to Cellular phones is illegal. I claim no responsibility for
anyone listening to these illegal frequencies, even though I am aware that
the best way to get people to try something is to write a law against it. I
am also aware that had the cellular phone industry prepared themselves for
this eventuality the laws in question would not exist. They simply found it
cheaper to pad politicians pockets than to address the real issue and
encrypt cellular calls. Of course, then, we wouldn't get to hear "I'm at
the store, did you want 1or 2 dozen eggs?" Yawn.

-Phil

know where to find a list of most
> used cellular frequencies. =
I Have an old Bearcat 810, 40 channel, but
> it's cellular =
ready, just need the actual frequencies, if possible.
>
> =

Well, you're going to need more than 40 channels. I'm not =
familiar with the unit, so I don't know if you have a search function, =

but if you do just set the search to scan 869 to 896 mhz and you'll =
catch every dull boring cell call within range. If you're like me you'll =
like it for about a week. Then it just gets old. If not, visit
http://intercall.com/~neuhaus/fccindex/cellfreq.html=
which lists the frequencies themselves =
(there are roughly 1000 of them!)

LEGAL DISCLAIMER:
Listening =
to Cellular phones is illegal. I claim no responsibility for anyone =
listening to these illegal frequencies, even though I am aware that the =
best way to get people to try something is to write a law against it. I =
am also aware that had the cellular phone industry prepared themselves =
for this eventuality the laws in question would not exist. They simply =
found it cheaper to pad politicians pockets than to address the real =
issue and encrypt cellular calls. Of course, then, we wouldn't get to =
hear "I'm at the store, did you want 1or 2 dozen eggs?" =
Yawn.

I've built an interface, and also written a successful frequency loading
program. I've been in touch with somebody else who has done the same.
Both of us feel that this kind of information should be shared. Both
packages will be available soon, either as freeware or careware.

FWIW, Scancat has a sale on their program plus overpriced cable for $115,
which is steep but still less than RS's ridiculous price. And Scancat
does an awful lot of other stuff. Radio Manager, whose shareware fee is
pretty modest, looks like a really nice package. It wouldn't hurt to tell
your local Radio Shack manager and salespeople about Radio Manager. My
experience with the better RS stores makes me think that they'd be happy
to let people know - especially if it helps them sell a scanner!

>adherents. I REALLY like my AR-8000 for what that is worth.

I think the R1 isn't in the same league with the AR8000 or MVT9000, or
the Alinco DX-10. In this category, it is the features you like and
want. I bought the MVT9000 because HF performance was an issue (I use
it as a world band portable SW receiver as well).
Plug in all the known frequencies for BBC, VOA, etc, and just let it
find them. Most portable world band SW's don't have anywhere near
enough memories to do this, and cannot label the individual channels
the way scanners can.

With a different antenna, these receivers do quite well in HF
service. The bind for me was the AM filters are so wide on the AR8000
(12 Khz), DX10 (16Khz), and R10 (12Khz) that it render a high
performance radio nearly useless in HF. The MVT-9000 has a narrow AM
mode that is much more suitable. Realistically however this is an HF
issue only, so if HF performance isn't an issue, this isn't an issue
either.

Icom W31A dual band transceiver. Like new with box, drop-in quick charger, spare ni-cad, alkaline
battery pack, and case.
Receives 50 - 299.9 MHz in VHF.....300 - 999.9 MHz in UHF. Relatively fast scan rate, 100 channels
per band. Asking $375 - shipped.
Radio Shack Pro 26 like new with box, manual, charger, ni-cads, and case. Asking $250.

Depends on your listening preferences. I would really avoid radio shack unless you want to buy their most expensive scanner. Go to a communication dealer who sells scanners and ask them what you should get. My advice is, if you live in an area where trunking is used, you can't beat the BC-235(hand held) or BC 895(base/mobile) with a stick. Even without the trunking, these are awesome radios. About the only thing that might be better is one of the AOR's but I wouldn't recommend one of them as a first scanner. A second scanner, maybe ;-)

If you will download the Demo version of Radio Manager and look
in the Help file you will find instructions for building the interface.

I've built two so far and as Ben (author of Raio Manager) says, it'll
cost you les than 10 bucks.... a DB 9 female connector, DB 9 shell
and a stereo 1/8" cable.

And it works 'real gud!'

Try contacting a Motorola dealer. They would obviously be your best
source of information. Especially considering it could lead to a sale
of a "Money-Rola" radio.

>
>

I'm sorry, but someone who calls themselves Wild Doggy can't expect anyone
to take them seriously. But that aside: ;-)

I know cellular phones are boring. I know this because I have listened to
them off and on for years. I have probably monitored hundreds of calls. Out
of those calls I can only think of one that is worth mentioning.

This guy and his wife/girlfriend/sex toy/whatever had a very long, bitter,
terse arguement spanning four hours and spent them all calling each other
every name in the book. The call ended with him calling her a slut and her
reply was "well if your dick wasn't so small, I
wouldn't have to sleep around." I was laughing so hard I was in tears. I
have yet to hear a call that topped that one.

You see, the problem here in the U.S. is that everyone and his dog has a
cell phone and uses it like some kind of prosthetic life sustaining device,
which means a bunch of stupid calls about nothing. Most of it would put a 5
year old full of sugar and caffeine right to sleep. There is the rare

exception, like you say, but with some 832 channels that are almost always busy, they are hard to find.

You also mention that any radio wave trespassing your property is fair game. I say yes and no. What about all the pay per view broadcasts on satellite? They are radio waves too, but unauthorized interception is considered theft, which I'm sure is against the law anywhere. As we move into 2000 I'm sure many countries will adopt the US stance on cell calls. Just wait until some bureaucrat from your country gets his ass in a sling over something he said on a cell phone. Next thing you know, they'll be an anti-cellular law in place, just like here.

With all the bashing going on, I thought I would relate a RS experience that happened about 45 minutes ago.

I walked into RS looking for some parts. When I got up to the counter, I noticed the TrunkTracker handheld. I asked a couple of questions and got intelligent answers. The guy knew his stuff. Then I asked him a question on the 400 channel handheld they had on sale. I got an answer that I couldn't believe at RS. He said, "I don't know, but I will sure find out for you." And he did!!

When someone doesn't know the answer, it is refreshing when they admit it, instead of making a fool out of themselves. I will go back to that particular store from now on. I will also search out Scott.

Dean, I have one of these units too. The range is very good but I find the audio (user to phone line) to be rather "muffled". It's definately not as crisp & clean as a regular wireline phone. Have you found the same thing?

I guess once I get off of my ass and order a service manual I can rectify the situation.

By far the best cordless phones I've been witness are those "long range" ones. Check out http://svinet.com/Lm1000.html to see some. These things work like gangbusters. I programmed in all the frequencies in my BC9000 and I would say there are about 100-200 of them within ear-shot of my place.

4693. Pro 60 Help Needed

Newsgroup: rec.radio.scanner
Date: 1997-11-21 00:00:00 UTC
From: BJC <bjc@mydesk.com>
Message-ID: <34764B49.E52@mydesk.com>
Source record: 179846

I am re-posting this question, since there was no reply previously...

My Pro-60 seems to have bit the dust.
It scans, but never picks up anything. I have had it for 2 years and it was working fine until last week.
I have tried putting a different (much bigger/better) antenna on it to no avail. If I put in an FM music (FM wide mode) station and turn the squelch down until I hear static, I can barely hear the station.
Volume/squelch work as normal.
I have checked the antenna connection inside and out and they look fine.
Is there a reset button like on older RS scanners? Will it help? (I really don't want to reprogram it if I don't have to).
Is it worth getting fixed at RS (or Lakeshore Electronics here in Toronto) or should I just scrap it?

Any help is greatly appreciated.

THANKS!

Hi gang:

Well, I had someone interested in the Pro 2006, but they decided to get
something different, so I am once again posting this item for sale.

It's in excellent condition, with the telescopic antenna and original
manual. It's been used very little since I got it and want to find a
good home for it. I will ship UPS (insured), so it makes it to you.
Price is $350, or will consider trade for a dual band mobile.

Reply via email, please.

7-3,
Erv KB8TNQ

> "Whose woods these are I think I know...."

Mine does have a slight "muffle" but marginally different than my
regular corded phones, it's worth it. I use it almost exclusively due
to it's security.

Edited by Ron Sujkowski. 10-11-97

--- SCANNER Version 14 ---

Let me know of any new frequencies and/or anything that you see here is wrong
by preferably leaving me e-mail on the internet at: Ronalds@concentric.net
or on any of the bay city/saginaw bbs'
If you want I can also email the latest list as well to you.

Excellent scanner web pages on the internet:
grove.net,
li.net/~j4dice/scanli.html,
pacifier.com,
oz.net~gmcavoy/index.html,
cris.com/~lsbutler/
ourworld.compuserve.com/homepages/gbouwkamp/index.htm
perconcorp.com

Updates since SCANNR14.ZIP (SCANNER Version 14):
added a Bad Axe ham repeater,

Ones that are missing and wish to have, if you have them let me know !:
Any private security agency, Any federal freqs that you hear locally.
Any of the state police upcoming 800 band frequencies.
The upcoming 800 band frequencies for the thumb area.
Any police codes. In Bay City- code 5, etc.

*If an asterisk(*) is used in the following, it is (Shared),
frequency also being used by another local agency.

If the antenna is longer than about 60 inches, and about 1/2 inch diameter,
it is probably VHF-LO band, usually in the 30-50 MHz range.

If the antenna is about 18 inches long, and about 1/4 inch in diameter or 40
inches long with a 3 inch coil at the bottom, it is probably VHF-HI band,

in the 150-165 MHz range.

If the antenna is either 2 inches long and about 1/4 inch in diameter,
or about 6 inches long and 1/8 inch in diameter, it is probably in the
UHF band, in the 450-470 MHz range.

If the antenna is about 2-3 inches long and about 1/8 inch in diameter or 18
inches long with a coil in the center it is probably in the 800 MHz area.

If you can get a look at the bottom of a Motorola radio and it has a colored
dot, symbol or letter on it, you know the frequency it is on:

4699. Strange Reception Problem

Newsgroup: rec.radio.scanner
Date: 1997-11-21 00:00:00 UTC
From: Willie Brown <wbrown@1st.net>
Message-ID: <654cff$5lm$1@news3.ee.net>
Source record: 179852

Hi, I monitor VHF-HI for the most part & have a problem that started occuring a couple of months ago. First to start I have a Scantenna mounted on a 40' tower connected to RG-8 cable. The RG-8 has a standard PL connection which I put a motorola type adapter onto so it would plug into my UNIDEN bc145xl scanner. The problem is after a while (1-5hours) The signal coming in gets weaker. To make the signal come back up all I have to do is unscrew the adaptor and screw it back on and then everything is strong again. I can't figure this one out.
Any help or advice would be greatly appreciated.

Willie Brown

Source record: 179853

FYI.

On page 59 of the RadioShack PRO-64 400-Channel Portable Scanner Owner's Manual Cat. No. 20-564 the text describes "Connecting A Data Link to the Scanner". I dropped by the local RS and asked what this was and how much?

Special Order
"Data Link"
P/N 11996428
$129.99

The PRO-64 was on sale behind me for $199.99 so I decided not to buy but I noticed that the I/O question was threading around on this Newsgroup.

Enjoy,

Ian

$129.99 ?!?!?!? For a glorified earphone cord?! I thought the BC 895 cable
was steep!

You can build your own for less than ten bucks. Check out
http://www.interplaza.com/bensware/rm.htm Download Radio Manager and look
in the help file. You'll find the plans there.

The thought of spending $199.99 on the unit (on sale) and then paying
another $129.99 for $10 worth of hardware is outrageous. I am so sick and
tired of being fleeced by scanner manufacturers when it comes to
accessories, especially PC interface cables. It seems like everytime they
use the word "computer" to describe something they triple the price tag.
What a total rip-off!!

I am going to send a note to Pop. Comm. and see if they would be interested
in writing an article showing how to make some of these interfaces. If you
know how to build one, drop them a line too. Maybe we, the consumer, can
remind these companies who supplies their bottom line.

> He's an "electronics technician" now. (Oooh! Ahhhhh!)

He has never proven that Phil. He just lies and says he is. His reputation, a smoked power supply and burned up repeater says he doesn't have a clue about dealing with electronics.

He does have a Ham Radio license. Doesn't prove much more than he is able to memorize text though. Certainly doesn't prove anything considering he is known for frying radios and power supplies because he doesn't understand negative and positive poles in electronics.

> I guess hooked on phonics worked for him... (Hee, Hee)
> And he is a patient at the asylum, not a nurse.

Why not just leave it at John-boy is in dire need of mental health care. Being a chronic liar is just one of his many defects.

> Oh yes, and I am a professional troublemaker according to him.

John-boy likes to say that about anyone that questions his babble. A funny statement coming from a person that holds the record for off topic posts in a Usenet newsgroup. 200+ off topic messages in four week period is something John-boy is quite proud of. But don't forget, he did make one lame pager post that he is damn proud of!

Listen up everybody. I think I speak for everyone on this. At first the
John Mackey vs. The World threads were funny, entertaining, even
irresistable reading. I even participated in the fray, tossing in snide
remarks here and there. But now I think it's time to grow up and move on.

We have tried everything with this clown. We've tried reasoning with him,
arguing with him, swearing at him, even outright personal insults. Still he
is here, wasting bandwidth. Enough already.

We got rid of that stupid "Emilio" asshole by not responding to his
gibberish, lets do the same for "John Mackey--KA0SSF". If he wants to
whine, bitch, piss and moan, let him. I intend to ignore it all from this
point forward, and I encourage everyone to do the same. Let the idiot have
his last word. Who cares! This newsgroup is about scanners, not personal
pissing contests.

Goodbye John, and good riddance. Don't bother to reply, it will only be
ignored.

As a programmer (and, as a result P.C. Technician - they taught it in
school, and I found it beats waiting up to a week for a tech around here)
living in the Phoenix area, I've seen some nasty lightning storms and I can
tell you that there is no substitute for a UPS - Uninterruptable Power
Supply. Sure, they're much more expensive than a $10 powerstrip, but well
worth the cost when you consider the $2000+ piece of hardware it protects.
Plus, both APC and TrippLite will replace your PC or any other equipment
connected to their UPS up to $25,000 in value if the thing gets fried.
Combine that with a phone-line surge protector (which also carries a
similar guarantee) and you have nothing to worry about when and if
lightning strikes.

What about that external antenna mast? Anyone owning such a thing would be
stupid not to have a lightning arrester inline, which, if you get the right
one, also has a replacement guarantee for your equipment. Being an
apartment dweller, I have no such tower to worry about.

I have looked at the spec's for the WinRadio, and the only reason I don't own one yet is because I just don't stay home in front of my PC enough to justify the $500 purchase price. Each time I look at one though, I like the idea. Think about it, total computer control, excellent frequency coverage - literally DC to daylight - and virtually unlimited channel memory capacity. What's not to like? I think if they ever make an external version I could take to work or on the road, I'm sold.

The programming manuals for Motorolas MT2000S refer to using multiple systems, and in fact in the Seattle/KingCounty area, the "system" is in fact 3 coordinated systems(Seattle, Eastside, ValleyCom)linked through with Smartnet. This said, there may be traps left for you. If you really want this to be easy, have the "other" guy ship his system data to your primary radio shop. The primary shop can install both if he has the "secret key" code. The MT2000S should cost you $1400-1800 including charger, battery, and antenna. If the second guy won't share, get the local radio geeks to give you the information for the second system. You can bet your round silver badge that they have everything you need. Good Luck.

Nigel,

Although I do not have an MVT-7100, I am very interested in the radio. A
few years ago, Howard Bornstein wrote an all-encompassing review about the
receiver. That is posted several places on the net, and I am including a
link to one such posting.

In the review, Bornstein addressed that exact problem regarding the unit's
drifting in SSB mode as it warms up. Here is a portion of that text:

"Rather than requiring the use of a beat frequency oscillator (BFO), the
7100 uses true carrier injection to provide SSB reception. However, there
are still a couple of things to consider. SSB signals are designed to be
tuned 1.4 KHz above and below the carrier in the MVT-7100. So, instead of
just dialing in a frequency, setting the mode to USB, and getting the
station, you need to tune above the desired frequency by some amount. While
1.4 KHz is the factory spec, each unit tends to be off by a certain amount.
In addition, the accuracy may change as the unit warms up. However, once
you "zero-in" your own receiver by watching how far off it appears, you
will be able to accurately dial in the sideband frequencies you are
interested in."

Hope that information can help you, Nigel.

For those who are questioning the legality, I make the following suggestion. "www.policescanner.com" is run by Audionet. Ask them about this. If nothing else, it clears the speculation. I kind of like worldwide monitoring capabilities. That might keep pressure on public officials to keep it clean and professional.. Just my 0.00000001 cents worth. (the value of a penny in my book)

PURE BS! Liberals want to take away our scanners, our guns, and our
property rights. We have seen this time and time again through the
efforts of one Bill CLinton. The scanner law has far more liberal
democrats signing on than Republicans. Face the music. Liberals want
to take things from us.

John, the anti scanner bill is still alive and well. Try to persuade
your own Congressmen to not vote for it. That is our best method
available to stop this bill before its too late.

Last thing I heard was that GE has the contract....

that was about two months ago...

they have a digital feature that Motorolla don't
and SF wants to be fully digital eventually.

Been using a RS PRO-39 hand held for over 8 years now.

This little radio has served me well. Its sitting
next to my new uniden bearcat 895xlt.

Still running, but its slow compared to the new radios.

Message-ID: <656atf$hb1@hopper.acm.ORG>
Source record: 179678

Brian Johnson <2pctv493@nemontel.net> asked:
> ... where to find a list of most used cellular frequencies.

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Cellular Telephone [22.902]

Chs Freqs (base) System Use

991-1023 869.040 - 870.000 A - RCC voice
1-312 870.030 - 879.360 A - RCC voice
313-333 879.390 - 879.990 A - RCC data
334-354 880.020 - 880.620 B - Telco data
355-666 880.650 - 889.980 B - Telco voice
667-716 890.010 - 891.480 A - RCC voice
717-799 891.510 - 893.970 B - Telco voice

Transmissions are FM (some systems are adding digital).
Channels are 30 kHz apart. Mobiles transmit 45 MHz below the
base (824.040-848.970) and are usually repeated by the base.
Channels 991-1023 are also identified as Chs 800-832.

>WS2000?

The WS2000 has twice as memory memories and smaller scan banks. The method for entering search limits is different (perhaps easier). The IF circuits have been changed, allegedly for better performance on VHF. There =may= be fewer birdies and less intermod; I'm not sure - except that it seems the newer model has garbage on more frequencies that affect my listening than the older model. There are a few other minor features that are added or upgraded - otherwise they're basically the same radio. Here in NYC either one can get swamped in areas of high RF (e.g. midtown) but do pretty well in the burbs.

>I have heard that if you live in a populated area you should
>get one with less sensitivity. I live in New York City, but in a
>residential area outside of Manhattan, so it's not that crowded, but
>maybe considered crowded in comparison to other places, so I don't
>know if I should look for one that is sensitive or not.

An insensitive radio can still pick up garbage; it is more important how well it is shielded and how the basic receiver circuit design performs in areas of high concentration of radio waves. This is not the same as basic reciever sensitivity by a long shot. Some of the most insensitive radios I've owned were also the most susceptible to receiving garbage.

>If I buy one
>that isn't sensitive would an antenna compensate for this if I ever
>wanted more sensitivity? Any advice would be really appreciated.

A better antenna will improve reception but your options are limited with a handheld, especially if you want portability and freedom from attracting undue attention in public areas.

Source record: 179681

Since 3 of the 'old' cities (Etobicoke, Scarborough, East York) are already running Motorola trunk systems (and North York Fire's radios are 800 MHz), we'll probably end up with a big monster 800 MHz trunk system (at least for fire). Don't know about the other services. North York has recently added several UHF repeaters for their works departments (412.2875, 413.4875) as well as several others in the 410-414 band. Toronto Hydro has a 900 MHz trunk system, etc. etc. With all this variety, it's anyone's guess what we'll end up with.

> or the computer, but I fully realize the possibility of such is increased over
> not having the phone line connected.

A friend of mine had lightning strike quite close to his home a couple
years ago. This was not a direct hit - but real' close! Anyway, it did
in fact take out his modem (internal) but not anything else in the
"box". The assumption was that it was a common-mode 'strike' on the
twisted-pair and the protection (MOVs) in/on his modem card actually
protected the computer. He went to take the modem back under warranty -
it was warranteed for five years - and they gave him a new one. The
kicker is/was he returned the 14.4Kbps and they gave hime a new
28.8Kbps. 8-)

Anyway, I would like to think that Winradio does have some kind of
"protection" for this kind of thing.

During a direct hit (common or differential-mode) I don't think anything
would survive.

Dane,
Depends on what your needs and price range are. Have a
look at my Picking A Scanner/Receiver web page :

http://www.qsl.net/n2mca/PICKRECV.HTM

Follow all the links there for some self-education on
scanning and your introduction to the hobby. You might also
want to check out my New Scanner User FAQ page :

http://www.qsl.net/n2mca/NEW_USER.HTM

and then my main radio page

http://www.qsl.net/n2mca/RADIO.HTM

So do some web reading and then feel free to get back to me
if I can help answer any questions. Good luck!

Strong signals,

Body handling: HTML body converted to readable text

If you truely have all the individual trunk system frequencies in the TTracker, it will scan through them and lock up on the data channel. If you do not hear a noisy constant carrier transmitter on one of your programmed channels, then you do not have the data channel in it.

Tom

If you truely have all the individual trunk system frequencies in the TTracker, it will scan through them and lock up on the data channel. If you do not hear a noisy constant carrier transmitter on one of your programmed channels, then you do not have the data channel in it.

>in writing an article showing how to make some of these interfaces

Don't hold your breath waiting for Pop Comm (or Monitoring Times, for that matter) to advocate on behalf of scanner buyers. Those rags suck up to their advertisers and could care less what their readers think! Pop Comm is no longer relevant--they mainly have articles for old fart hams and SW radio listeners. They have long given up any pretense of objective journalism. MT is more intent on blathering on about anything and everything that Bob Grove sells. They're both populated by pretentious phonies who wish they could be journalists but instead have to settle for being shills for their advertisers. The only rag in this business that was ever worth a damn was Cheek's World Scanning Report newsletter. That was badly put together too but at least it was objective.

I'm certainly glad I bought a PRO-64 and a Uniden TrunkTracker this week, for next week they may be outlawed.
Do Radio Shack and Uniden know about the "conspiracy" to make scanners illegal? I would think that the folks in Fort Worth would be quite upset if they knew that their major product line was about to be outlawed. Think of all the money which would be lost from the sales of scanners to potential "lawbreakers"!
All kidding aside, haven't we had enough "scanner paranoia" in this NG?

Cross-posted to: rec.radio.scanner,alt.radio.scanner

_ I know that we are currently unable to get various schematics
and service manuals for the trunked tracker scanners, but RS has
recently put a DETAILED PARTS LISTING of the Pro-90 scanner on their
website. You might want to load it up and take a look at it or save it
for any repairs down the line. Also you will also find a part number for
the service manual!! There may be a day when you can actually order it.
Send your browser to http://support.tandy.com/support_electronics/42507.htm.
The parts for the Pro-90 and BC235xlt should be about identical.

Wiggie

I thought you AMSAT guys were rocket scientists & stuff (i.e. intelligent, decent people), not white-trash that spam Usenet newsgroups with commercials! Perhaps Vinnie is the exception, but anyway, these frequent AMSAT spams (in particular, to groups like rec.radio.swap/shortwave & scanner) tend to reflect poorly on AMSAT, not just Vinnie...

Dear Mr. Ward,

I know you are busy so thanks for taking a moment, I won't expect a reply. I want to congradulate you and all the members of the team who have been so central in the fight against HR2369 and it's predecessors. But I am not without some very grave reservations about what has actually transpired so far.

Speaking as a 25 year veteran of the hobby, and not as a represenative of CARMA, I want to tell you that I am fully aware of the difficulties and paradoxes involved in trying to deal with politicians. And I'm sure that the many crackpots out there calling congressmen Nazis on the phone probably does us all more harm than good. With a lot of these guys it's literally "I dont care what you say about me as long you spell my name right". But perhaps when the committee members get these calls it at least convinces them that they are sitting on a hot issue bombshell instead of the usually boring-to-tears telecom issues. And I hesitate to try to stifle people expressing themselves to their congressmen no matter what they are saying. Heck, at least they bothered to call. But I can appreciate the position you must be now finding youself in.

I fought against local scanner laws and won. I fought against the ECPA and lost. I fought against the modification to ECPA for cordless and lost. I am far from convinced that 2369 would have passed had we done nothing. It was poorly written, lacked sponsorship in the house, and contained many conflicts, rendering it into legislative nonsense had it passed in it's original form. But thanks to the many modifications engineered by "our side" it now appears to have quite a good chance of passing. Tauzin has reaped untold free publicity from our efforts and I'm afraid we have provided Wheeler and the CTIA many recent opportunities to air their mis-statements and deceptions along the way. Yesterday I had a news reporter tell me that Wheeler had told her that very few people listen to cellular phones. I just had to laugh.

I am glad to see that some of the core elements of this wonderful hobby can still unite to a put up a front against legislation which threatens it. I become very concerned when I see them essentially supporting a bill which restricts a couple of hundred megahertz from our radios, forever. Does the modified 2369 still stand in the way of the development of digital capable radio receivers for hobbyists? Yes it does. Is that acceptable? Clearly, No.

It's great that we have some ability to impact pending legislation. But does this mean that we then stand behind a bill which removes more spectrum from our radios? Frankly, I can't bring myself to do this. HR2369 is inherently wrong. It's wrong in it's goals. It's wrong in it's execution. It's wrong because it's paid for, special interest legislation. It's wrong at it's very core and intent. No amount of modification is going to make it right. The Comm Act of '34 was one of the most insightful pieces of legislation ever passed and it could continue to serve this country throughout the next century.

Maybe it puts me in with the gun-toting ultra-right crowd for the first time, and maybe I'm looking at the world through rose-colored glasses, but I'd rather we had lost and 2369 had passed in it's original form, unlikey though it seems, than to be in the position of feeling like I should support these efforts aimed at compromise. And frankly some of what you have written on Usenet REC.RADIO.SCANNER esposuing Tauzin's sincerity and good will leaves me with a very bad taste in my mouth. This guy was bought and paid for, another corrupt crook. The CTIA contributed over 47,000 dollars to his re-election campaign and he comes up with a bill that protects their member's profits. If that isn't corruption I don't know what is. You make it sound like he really wants to work with us and protect the hobby. If that's the case why is he proposing a bill to remove frequency coverage from radios? Is that a good thing? Does "our side" still know what it's doing or are you being slowly turned into political pawns? It's easy to lose sight of your real goals when engaged in these battles, kinda like not seeing the forest for all the trees. Maybe it's time to take a breath and pause and reconsider.

After reading about what this committee did to Bob Grove I'm convinced they could sucker anyone.

I've given this matter a great deal of introspection and have come to the conclusion that I can't support the path we've turned onto at this point. I am greatly saddened by our current state of affairs. I find it very depressing. I am sorry. I can't support any bill that further removes more spectrum from our receivers in any form. It comes down to that. And that's what HR2369 is all about, that's it's core and intent, to make it illegal to listen to radio signals. How is this a good thing? I do extend my appreciation to your team for your well intended efforts against the passge of the bill to date. I will continue to fight against it's passage, in any form. I feel like more effort should have been extended towards media exposure of these congressmen's re-election campaign contributions, and less towards this spirit of compromise and surrender. It pains me to be a voice of dissension in the fight against the bill, but I have to look at myself in the mirror in the morning.

Happy Scanning!
Ted Moran N9UQW

All,

H.R. 2369, as it is now
>written after being amended, DOES NOT make it illegal to listen to anything
>that it is not already illegal to monitor above 30 MHz except PCS - personal
>communications system devices - those cellphone, pager, e-mail combination
>devices. The bill DOES require that frequencies used by PCS be deleted from
>future scanners, but since PCS uses digital transmissions and can't be

>monitored by scanners anyway, that's not a great loss.

The bill DOES NOT
>make existing scanners that cover the PCS frequencies illegal to own,
>anymore than the ECPA made existing cellular capable scanners illegal to
>own. If you already have 'em, you can keep 'em.

There is some question that
>H.R. 2369 MAY inadvertantly impact the legal monitoring of certain shortwave
>utility services. It also MAY inadvertantly make it more difficult for the
>manufacturers to produce a scanner capable of monitoring digital public
>safety radio systems.

I spent more than an hour on the phone today with
>Tauzin's legislative affairs aide and she promised to clarify these issues
>and Tauzin has promised that if additional re-wording of the bill is needed
>it will be done.

Tauzin has gone a long way toward satisfying our concerns
>with the original bill - much further than I ever expected him to. I have no
>reason to believe that he isn't willing to continue to work with us.

Is it
>time to sit back and relax and not worry about the bill? No, of course not.
>There are still some questions to be answered, and possible clarifications
>to be made. But Tauzin's demonstrated willingness to work with us clearly
>shows that the inflammatory rhetoric being spread by some folks on this
>newsgroup and elsewhere is not appropriate, and may well be
>counter-productiive.

4780. AOR AR8000 questions

Newsgroup: rec.radio.scanner
Date: 1997-11-22 00:00:00 UTC
From: Joe <joentam@transend.com.tw>
Message-ID: <34764DDB.EFB2CD2B@transend.com.tw>
Source record: 179796

Two questions re. the AR8000 wide range receiver:

1. What is a good price for one? Found a new one for 3200HKD,
or about US$ 415.00 --seems very reasonable based on "used"
prices posted here and on Javiation? price of 355 UKP.

2. The unit I'm looking at seems to be the UK "band-plan" --
can it be changed to the USA bandplan (or other) without
a PC interface?

thanks,
Joe

The radio is in excellent condition, rarely used. I am willing to trade up/down for another SW radio or scanner. Please e-mail with description/condition/price of your item for trade.

There's nothing wrong with the radio. I do not have the manual or box. I would like somthing smaller for traveling or a larger desktop. I figure a fair used price on this radio is $300.

Dont get me wrong, I think FRS is pretty cool. But then, I think anything that transmits analog RF signals is pretty cool... BTW - I missed one, you can't alter the antenna, either. Hey, what if he removed the driven element from a UHF yagi and pointed it at the mall. Then you hold the handheld's rubber duck up where the driven element used to be. Not exactly keeping things in the spirit of the law, though...

4793. Icom R100 Docs Available

Newsgroup: rec.radio.scanner
Date: 1997-11-22 00:00:00 UTC
From: tandkmoran@aol.com
Message-ID: <19971122013300.UAA06754@ladder01.news.aol.com>
Source record: 179809

A few years ago I had a radio shop. A good customer and friend walked in, the proud owner of new (used) Icom R-100 mobile receiver. But he was bewildered by the manual and had the radio doing things the manual didn't explain. I spent about 10 hours hacking the radio's functions and trying to decipher the Jinglish manual. Have you ever seen the R-100's manual??? I ended up writing him a new manual and as I recall he insisted on paying me for it. Anyway, I hold the copyright on it.

If you own an R-100 and fully understand all of it's features then this is not for you. However, if you are a new owner, a confused owner, a frustrated owner or are probably unaware of it's un-documented features, you will want this. Yes, I did find not only a couple of features not in the manual, but also errors in the manual, and things the manual said the radio would do, but it won't!

I see a lot of people ripping this radio. I understand why, it's pretty odd. But once you fully understand how to use all it's features to your advantage, it's a pretty powerful little box. A great display, really sexy, and amazing audio, especially with a good external speaker.

Well, the manual was written for high quality printing on a Mac, using MS Word 5.1a and MacDraw Pro. I have finally succeeded in translating it to the PC world, though I suspect it's a huge step backwards! Actually, it survived the translation fairly well. It now exists as one formatted RTF text file (with a table) and one GIF of the face of the radio with my notations. The GIF also contains a function chart. Hint - both are formatted for landscape page setups. Most word processors will open the RTF, open the GIF with an image file viewer or try inserting it into the RTF file from within your word processor program. If at this point you have no idea what I'm talking about this may not be for you. (These are not straight ascii text files).

The manual was locally oriented, so if you are not from Chicago, some of the examples may not make sense. My customer was not a "documentation-oriented" kinda guy, so it's written in a very easy to follow style.

I in no way guarantee the manual's accuracy or content. The reader assumes any and all liability associated with the manual's ownership and the associated operation of the receiver. Any Nit-Pickers will be summarily hunted down and executed.

If you are still interested, and if I dont get instantly swamped, send me an e-mail and I'll send you the files. Our Usenet Hosts / Slumlords get very upset when we post binaries here, and I can't do it anyway from this here god-awful AOL browser. Blech.

Happy Scanning!

It was 'fumes' all right, but not solder fumes. You see, this old world has two basic kinds of people. There's smart fellers and then there's fart smellers, and our Mischievous, Malodorous, Miscreant, Mongrel Monkey Mackey happens to be so unfortunate as to be the latter in lieu of the former.

Repeated 'exposures' moldered the poor lad's brains and turned 'em into cottage cheese. That's why he runs around a couple of digits shy of a zip code and a couple of bricks short of a load.

He's just unfortunate is all.....

;-)

Look Glenn, you're just going to have to get off the Mongrel Mongoloid Mackey's case because he is an unfortunate victim of thalidomide. The poor sap was boor without eyelids, would you believe!

He had a bright doctor, though. After they did the circumcision, the doc just cut it into two pieces and grafted 'em onto his eyebrows. When he reached puberty, they plucked a few pubes and stuck 'em in the edges for eyelashes.

Being so unfortunate as he is.....we probably ought to pass the hat and take up a collection for the poor dork.

I am a Tandy stockholder, and according to their last quarterly statement, they do indeed have ambitions of dominating the telecommunications market (particularly cellular) and currently have a deal with Sprint.

Thier stock recently split, and is currently selling in the neighborhood of $37/share (NYSE symbol: TAN). I bought the stock as a lark about two years ago, and I must say that in spite of my disdain for their service and salesperson knowledgeability, it has been an excellent investment. However, I do regret that my gain is mainly due to some poor schmuck working for $4.50/hour and making 1% commission. I guess that's corporate America for you...and I'm not stupid enough to think that Tandy's the only one doing it. For what it's worth, I'd be willing to give up some of my profits in exchange for Tandy treating their people decently. I'd also like to see the "droids" unionize and demand a fair share of the remarkable profits Tandy has made off the backs of the rank-and-file.

No biggie. Just my opinion.

Charlie

>--

The Pro-2035 is a great scanner and you will find that it is one of the
best for computer control. I definately would tell someone that wants to
computerize their scanning to go with this scanner or the Pro-2042 over
the Pro-2004/5/6 scanners for several reasons. Let's try to provide some
of your answers to the interface questions:

_
1) Bill Cheek's CE-232. This interface is primarily intended for the
Pro-2004/5/6 scanners. It will only work to program the channels into
the Pro-2035. It will not log the frequencies with this scanner. You
will be paying $149 for the kit and then you have to mess around with
wiring it up...you might as well go with the PROgramit interface which
is much cheaper, easier to hook up and faster. (see option 4)

_
2)Opto board. The OS535 is a great interface board for the Pro-2035, but
it is just that. You need to have additional software to operate it. That
software can come in the form of Probe, Scancat, ScanStar, RadioManager,
Listening Post and others.

_
3)Probe hookup. Well, there is no 'Probe hookup'. The Probe setup that is
used by several scannist is the OS535 interface that is operated by Probe
software. Probe is just the software and needs the OS535 to allow the
computer to communicate with the scanner. THIS IS AWESOME! It allows you
to scan at very high speeds with TONS (99,000, 99 banks of 1,000 channels)
of channels possible in up to 4,000 files. Great logging capabilities;
DTMF, CTCSS, and other decoding; signal strength...just too many things
to mention. One thing to note though...even though you have vast amounts
of channels available when hooked up to the computer, no program using the
OS535 interface can program the scanner's memory.

_
4)PROgramit interface. This is a relatively new interface that works well with several different scanners. There are both the serial and parallel versions possible. This is a great addition to the scanner. It does take a little work (and soldering) to get it up and running, but it allows you to program frequencies from files stored on the computer.

_
I would probably start out installing the PROgramit interface so you can quickly program/reprogram all/part of the channels in the scanner. When you get a bit more interested in it then get the OS535 along with the Probe software. Now you will have a great scanning setup.

_
CE-232 interface: $150; http://ourworld.compuserve.com/homepages/bcheek/
OS535: $200; http://www.optoelectronics.com/pcscan.htm
Probe Software: $90-100; http://home.ptd.net/~pro2006/probe.html
PROgramit: $20-40; http://www.qsl.net/ka2pyj/

_
Sorry to break the news to you, but you won't find much support for the Mac. I know that there is some Mac support of the CE-232 along with some small programs written for the OS535, but most of the programs are DOS or Win based. A 386 that can handle Win3.1 is all that you would need to run a Probe/PROgramit combo, but I prefer to run them under Win95.

_
I have some experience in the installation/operation of all these setups, so feel free to e-mail me. I do not have any monetary ties to any of these forementioned setups..just a satisfied user and scannist.

I think the owner of this scanner will be laughing all the way to the bank. Around here (northern Illinois) 2006's regularly go for original purchase price, sometimes even more. I personally have never seen a used one for less than $350, on the rare occasion I do come across someone willing to part with it. People know what they have and they're not interested in haggling.

The PRO2006 is (arguably) the vanguard of scanner technology and was the first scanner to make everyone notice how much you can stuff into one little box. The fact that it can be modified a zillion different ways helps, too.

Read some of Bill Cheek's books/articles about the 2006 and you'll see what I mean.

If you do as part of an MCI, I can assure you that you'd receive a
toe-tag. It is standard procedure on an MCI to declare patients that
have no respiratory effort, or the inablity to maintain a patent airway,
unsalvageable. Not pretty, but reality.

Well, I was just wondering if it had anything w/frequencies of the
high end FM (107.9) & the low channel number stations I loose
frequently (3, 5, 8) on the TV. The higher numbered local stationed
don't exhibit this. But again, most probably it's the tuner as you
have suggested.

You can get them to 2 meters pretty easily.

A lot of people use paging on 2 meter repeaters.

They have to remain in the 140-174 MHz range, there is NO WAY
you could take them to 500 MHz. Motorola made a model of the
Spirit pager that was 406-512 MHz.

EugeneD wrote:

4830. PRO-64 and PRO-2041 Computer programming info

Newsgroup: rec.radio.scanner
Date: 1997-11-23 00:00:00 UTC
From: look@mysig.below
Message-ID: <659vns$6ij@camel19.mindspring.com>
Source record: 179630

I have been playing with the serial interface to my PRO-2041 and
have written up a web page on how to use it. I detail the building
of the interface as well as the protocol between the computer and
the scanner (as much as I have deciphered)

It includes links to Linux source code as well as DOS based
source and executables for programming the scanners from a simple
text file.

Of course, I welcome any questions and comments. Have fun!

I have a Pro-2006 in mint condition with a nice, bright, back-light.
This scanner has the "on-off" verses the older "bright-dim" switch.
It comes with the highly regarded "impossible to buy" from Radio
shack Service manual and The "Scanner Modification Handbook by Bill
Cheek. If you have been thinking of getting a 2006 or an unblocked
scanner, this is the best! With triple conversion (to avoid images and
strong adjacent channels) and a wide frequency band, it is commonly
acknowledged as one of the best scanners ever made! Now you can get
the whole package for the price of a Pro-2006 in excellent condition
alone! (This statement is based upon the proliferation of excellent
2006 scanners priced at $350.00!) $349.00 + Shipping

We'll return to richh@netcomuk.co.uk and All's
discussion of UK, Surrey, South England

ri> Hi group.
ri> I just wondered if anyone scan is the south of england? I would like
ri> to know if anyone has any good freqs... (same old question, i know!)

Since this is an Australian newsgroup, I'd be really pleased with my
scanner if I could scan the south of England from here! ;-) You might
need to find a more local newsgroup, unless there's other Britons
lurking in here. :-)

Does anyone know of a uk.radio.scanner newsgroup that might help
Richard?

I think there is a rec.radio.scanner as well that might be worth a look.

Good luck. :-)

This radio is actually the Uniden BC235XLT. It's made by Uniden for
RatShack under license. From what I've seen the Uniden is cheaper and
comes with the same documentation as it's the same radio.

Sounds like some goverment agency got ripped off
Ht1000 16channel radios retail much less how about $800 or less
You can buy a new Mobile Motorola 1225 20-25 channel alpha readout for $500
new
if anything his price is high
Get you numbers straight.

I agree that $400 is a little low for this radio, but $1100.00
for a conventional portable is very high. If the portable
has options, such as encryption, or if it is a trunked radio
that price sounds OK. The number of channels alone does not always
give an indication of worth.

It would be good manners if the guy would post a price.

No..what I said was correct. These are PCS phones that have the
ability to fall back to cellular in a non-covered area. They are not
Cellular phones as Cellular is known.
PCS is not the same as cellular.

What is special is you do not have to buy add-on software or adaptors
to get it.
And, should the manufacturer improve it, you get the software upgrade
for free by downloading from their website. The scope,itself, was a
free download to buyers of the early versions of WR.

Hi Karl. Yes, Saturday was a busy night for the LAFD and allied agencies. The only thing sadder than this wreck (at the tail end of a very busy 24 hour shift) was finding out that it was indeed in our jurisdiction (by about 100 feet). It was an "all nighter" for many of us.... <frown>

Dead at the scene was an adult male. Dying later at Glendale Memorial was an adult female (pulseless and non-breathing throughout the ordeal), she was rendered "heroic" lifesaving efforts by the crew of a commercial ambulance service.

There were 9 other patients, including children and adults. One of the children was in critical condition and was flown to the Pediatric Critical Care Center at Children's Hospital of Los Angeles aboard one of the LAFD's four Advanced Life Support staffed Air Ambulances. With the able assistance of the CHP as well as Glendale and Burbank Police Departments, the twin-turbine Bell Model 412-SP aircraft (aka "Fire 2") was able to set down for a hot-load on the freeway. Last I heard, the child had a fighting chance at survival.

This was one of three multi-casualty wrecks that was underway at that time. A Camaro travelling at a high rate of speed ran in to the rear of a parked semi-trailer in Canoga Park at the same time. It required the skilfull efforts of Firefighters using the hydraulic Jaws-of-Life (R) Rescue Tool to free the three young adult males from the wreckage.

You can read more about this wreck (and possibly catch some photos) by visiting the on-line wire services or websites such as:

http://www.channel2000.com/news/stories/news-971123-123829.html

Greater Alarms, Haz-Mats, a Major Emergency explosion at a pharamaceutical factory....yep, it was all in a Saturday's work at the LAFD <grin>.

> Beats Saturday Night Live.

...only in that listening to a live LAFD "circus" is often more entertaining <g>

> Karl Dahlquist
> former RCMA CA-LA-956 (seems so long ago)

Karl, there are many of us in Public Safety who lament the national "Radio Communications Monitoring Association". Like a phoenix however, from the ashes have risen several devoted monitoring groups such as the Southern California Monitoring Association.

Karl, thanks for your continued support of the LAFD.

Monitor Safely!

What the hell were the ambulance medics working up a non-salvageable on
an MCI for? Heroic my ass-that is sloppy work considering there were
other, more viable patients onscene.

>Is there such an animal.
>Bill

No doubt, there is... although I wouldn't reccomend it, I wrote a
version which did just this about 15 years ago, and ran on a Commodore
Vic-20.

It's really something simple to do, with minimal parts required, and if
you don't want it to be two-way (phone line back to radio) it is even
simpler.

In the one I built, it was two way, and triggered on a specific pattern
of key-ups from the radio before dialing a preset number. Once the
number was dialed, it provided a simplex autopatch, every five seconds
or so, releasing the transmit and checking for carrier coming inbound.
If there was carrier, it would transmit that over the phone, if not,
it would return to transmitting the telco signal back to the radio until
the next 5sec check interval.

It sounds like you only want to transmit to the phoneline, so you don't
need to include a subroutine for two way simplex.

You first need to tap a line from your receiver which signals when
carrier is present (or use a PL decoder on the audio output to do
the same... ot a DTMF decoder). You need a computer with a couple
of TTL I/O lines, one of which is used to monitor the carrier detection
signal. Another TTL I/O line is used as an output from the computer
to control a 5vdc relay. This relay is connected in serries with
a 150 ohm tap of an audio transformer and the phone line. It is
this line which is used to "pick up" the phone line, and which is
toggled to pulse dial the line.

The other side of the transformer is connected to the output of your
radio. Selection of the impedance might need to be played around with
for best audio quality, but I think that a 600 ohm or higer should work
fine in this application. [for two way, you will need a centertapped
transformer, a few more components between one tap and the mic input of
the radio, and another 5vdc relay controlled by another TTL I/O line
on the computer for PTT.]

That's all that's needed for a basic system, made of stone knives and
tea leaves... anything in addition can be considered a "feature". ;-)

For a computer, try finding a Vic-20 for about 10 bucks (or less) at
a garage sale. They have a generous allotment of TTL I/O lines (more
than what is needed here) and can be programed in BASIC or machine code.

All I want to say is, there are only 2 companies that manufacture scanners for Radio Shack that I'm aware of, Uniden/Bearcat and and company called GRE from Japan. So, have you looked at the Trunk Tracker Radio Shack is selling, I'd swear it was the EXACT one that Bearcat has! Can't say who's got the best price though...

What's the joke. That's not a bad price. Very useful scanner. Easiest mod; you can do it blindfilded (if you're interested in full 800MHz). Wait a year; with the politicians we have, this scanner will be worth twice the price this man is asking. Laugh if you like.

PrimeCo just came out with a CDMA-AMPS dual mode phone. However, it does not have analog service everywhere that analog service is available. They have agreements in certain areas. It looks like they have no coverage, or future coverage planned, in many areas. St. Louis is one of those areas.

The FM radio thing is probably normal. Many times one gets dead spots on
FM radio. I have found some near downtown Orlando for some of the local FM
stations. Now the TV thing is different. I had a TV that did that, and the
tuner was bad.

Ted,

Thanks for your comments. I've tried to respond as best I can. The central issue, I guess, is whether HR2369 would've passed in its original form. If, as you suggest, it would not have, then those of us who have worked to modify it have probably done our hobby a dis-service. However, I don't think it would have been wise to take the risk of ignoring it. That was just too dangerous.

<< And I'm sure that the many crackpots out there calling congressmen Nazis on the phone probably does us all more harm than good. >>
I've had to spend a lot of effort just getting the folks in Tauzin's office to take me seriously and not just write me off as another nut case reactionary.

<< But perhaps when the committee members get these calls it at least convinces them that they are sitting on a hot issue bombshell instead of the usually boring-to-tears telecom issues. And I hesitate to try to stifle people expressing themselves to their congressmen no matter what they are saying. >>
Politicians are human, just like the rest of us. Calling a guy a Nazi of Commie is much more likely to result in a negative response than in changing his opinion. I'm not suggesting that anyone stop writing Tauzin or any other official who may have an impact on this bill. I'm only asking that they lay off the name calling and profanities.

<< I become very concerned when I see them essentially supporting a bill which restricts a couple of hundred megahertz from our radios, forever. >>
I believe we're talking about 40 megahertz, at most. And remember, these are digital communications, which we can't monitor anyway.

<< Does the modified 2369 still stand in the way of the development of digital capable radio receivers for hobbyists? >>
I've got really mixed feelings on this. The amended bill originally banned all digital capable scanners. As written now, the amended bill opens the door for digital scanners if Uniden and others can license the technology from from the SMR industry. Believe it or not, Uniden has signed off on this language. I'd much prefer to see that portion removed, but that's not going to happen.

<< But does this mean that we then stand behind a bill which removes more spectrum from our radios?>>
I'm still urging my Congressional representatives to vote against this bill if and when it comes to a floor vote, and I hope you'll do the same. I'm in no way "standing behind" HR2369, but just in case we lose in committee and on the floor, I'm doing everything I can to minimize its impact on our hobby,

<< And frankly some of what you have written on Usenet REC.RADIO.SCANNER esposuing Tauzin's sincerity and good will leaves me with a very bad taste in my mouth. This guy was bought and paid for, another corrupt crook. The CTIA

contributed over 47,000 dollars to his re-election campaign and he comes up with a bill that protects their member's profits. >>
Actually, according to research done by the staff at Monitoring Times, the CTIA donated only $750 to Tauzin's last campaign.

<< It pains me to be a voice of dissension in the fight against the bill, but I have to look at myself in the mirror in the morning. >>
Fighting against the bill's ultimate passage while also fighting to minimize its impact if it does pass are not mutually exclusive. We can, and should, do both.

: AL

I suspect that he meant to say Pro 2030.
As for mods-as I do not have(and can't get) a tech manual, I don't know if
channels can be added-most likely, if they can, they will not be scannable
simutanously-banks of 80 channels, switchable.
This is only possible if the pro-2030 has it's memory seperate from the
CPU-many units do not do this anymore.
I don't know about the 2030.
The person most likely to know about this is Bill Cheek-he has published
many memory mods, and may know about the 2030.

Icom have a portable unit the PCR1000 that looks very good. I have a
Icom IC1 for my own use and my employer has a WinRadio unit in a PC at
work. I think portability is a very serious consideration and the
WinRadio is not as portable as some applications require.

Body handling: HTML body converted to readable text

What about ressetting your newsreader to stop it spewing useless and
annoying html code into the newsgroups.

People should boycott products that are so poorly designed that they
output html code where it doesn't belong and has no function.

I see lots of these selling at fairly high value. I also notice that many people are wanting to buy this particular model.

Other than being a cell capable desktop scanner (like many others), is there anything special with this unit?

Is this a triple conversion receive scanner? Does it have any extra features not regularly found on RS scanners?

Just curious....

Quite true....I am sure there are applications where a PC based
receiver will not satisfy.
If you need portability, get a portable. There are handheld radios
available now that would have been considered absolutely amazing two
or three years ago.
I have WinRadio and am sold on it. But, I also have a couple of
portables , two desk units and a mobile.
If I had to decide between owning a PC receiver and a handheld I would
go for the versatility of the latter.
I would never recommend WR to anyone who was only going to own one
radio.
I do not think it is intended to sell to that market.....and I don't
think the Icom unit is, either.
Brian

Hi,

We have almost completed the new look site, but most of it is up and running at www.martin-lynch.co.uk . For those of you who like to check out our used equipment list, it now at www.martin-lynch.co.uk/used .

We hope you like it....

I am looking for a program that will autodial a number and when the number called answers the audio from a receiver via line-in or mic will be heard by the number called.
Is there such an animal.

Sounds like things have gotten worse at Tandyland. When I worked at RS 5
years ago they cut the commission in half to 3% during XMAS. No wonder
there are no happy workers in Tandyland.

True....WiNRADiO isn't portable exactly. The Icom PCR1000 is. But
look at the tradeoffs.... the ICOM is slow. And it is a hog on
CPU resources. And does it have an RF Spectrum Scope?

Tradeoffs are the name of the game in this part of the world, it seems.

> there anything special with this unit?

Yes. It is highly modifiable for more goodies if you want them.

> Is this a triple conversion receive scanner? Does it have any extra
> features not regularly found on RS scanners?

Not only triple conversion, but has an AGC controlled front end, seven
bandpass filters, double balanced mixers, and separate 3rd IF sections
for NFM/AM and WFM. A quality receiver all the way.

> Just curious....

And....it can be retrofitted for computer control and data acquisition.

Hi, I just returned to UK from a holiday in USA and found a very
simple old model Radio Shack PRO 2038 for 56 USD (ex-demo).
It covers the UK cellular band 800 to 950 Mhz (aprox.) and for that
money I'm not complaining.... thats about 35 GBP to you in UK.

Excuse me...if the unit can operate on both an 800 MHz cellular system and a 1900 Mhz PCS system, seems to me that it *would* be a cellular phone (as well as a PCS phone).

Maybe you meant to say that *digital* cellular phones can't fall back to PCS?

(Have you heard about the latest cellular scam? Some carriers are offering lower rates for digital phones, so a few people apparently are altering the electronic serial numbers of cheap analog phones to match the format of digital cellular ESNs, then signing up for service at the lower digital rate.)

That is trunking, and there is no way around the "problem", unless you keep on hitting the sacn button and manage to find the conversation. You can also program in all the mobile input freqs and listen to the officers in your close-in area... generally, that works to allow you to follow a conversation in the field, if they are real close.

Yes Witchita is using a Motorola trunked system. You would need a
trunking capable scanner such as a Uniden BC-235 or BC-895 to follow
these conversations. From Warren Whitby's teriffic Trunked Radio
Systems Users' Page:

Sedgwick County ����Motorola�����Analog�����Used by all county

2.45 GHz has no special properties which make it particularly effective at heating flesh. It just happens to be a ISM band where it is convienent to generate power in a cavity of a size useful for home cooking. It heats by ordinary dielectric heating. Microwave ovens typically range from 600 watts to 1000 watts. PCS runs a maximum of 0.6 watt.

There is some slight concern about localized heating to sensitive tissues in the head, primarily the eyes, but this is almost 10 db less than the power used by amateur HTs, and over 30 db less than is used by microwave ovens. If you persistently stuck the PCS antenna against your eyeball, there might be some concern, but otherwise it isn't a significant hazard.

I was wondering if anybody out there knew the pinout for the six
lines on the bottom of a Motorola Minitor II pager. I know there's
output for a new page coming in, and input for battery charge/power.
It would be great it there were also antenna in and audio out pins.

Email any info to: pmm3w at virginia dot edu
I'll post my findings.
Thanks

Sure there is a way around this "problem" Uniden introduced the first
consumer trunk following scanner aka BC-235 about 7 or so months ago.
Since then a base model was introduced (BC-895) as well as a
hardware/software solution named TrunkTrac. There are hundreds
postings in this newsgroup re: to these trunk following scanners.

The first microwave ovens in the 1950s operated at 915 MHz,
and were big, bulky, institutional-size brutes - as you might
imagine, when you consider the size of 915 MHz waveguide and
cavities. Home microwave ovens didn't become practical until
they moved to 2.45 GHz, with the attendant smaller cavities
and plumbing.

Wrong, The maximum power of the 1900 Mhz CDMA PCS phones is 200 mW, not 600 mW. 600 mW is the maximum power for the handheld analog cell phones. The ATT Digital PCS phones are 600 mW, but that is in a different frequency range than the range on discusion here.

4937. CAN TRUNKTRACKER FOLLOW US MILITARY TRUNKED SYSTEM?

Newsgroup: rec.radio.scanner
Date: 1997-11-24 00:00:00 UTC
From: REGISTERED MONITOR KUT7BH <kut7bh@earthlink.net>
Message-ID: <3479E3FB.7088@earthlink.net>
Source record: 179488

Does anyone know if the Uniden BC235 TrunkTracker or its clone the Radio Shack PRO-90 is capable of following the trunked system used by the US military, or can those scanners only follow the GE, Motorola, and Ericson trunked radio systems? An Air Force base close to my location uses a trunked system and it seems like the frequencies that are used change weekly, but I recall reading that the trunktracking scanners can't follow the military's trunked system. Please post replies in this NG or e-mail me.

Thanks,
David

> if so how do i get around this problem?

Sounds like trunking to me, Joseph. The only way I know of to really get around the problem of tracking trunked radio transmissions is to use a Uniden BC235 Trunktracker or Radio Shack PRO-90 scanner to follow the transmissions as the conversation switches from channel to channel. If you know all the frequencies the trunking system uses you can try entering all the frequencies into your scanner's memory channels from highest frequency to lowest frequency; for example, 860.9375, 859.9375, 858.7375, 857.7375, 856.7375, and so on. I've had limited success monitoring trunked systems on a conventional scanner using this method; that's why I'm planning on purchasing a BC235 TrunkTracker soon. Good luck.

David

David,

The Trunk Tracker scanners can only follow Motorola analog trunked
systems in the 800 Mhz range. The military trunked systems are
normally in the 406-420 frequency range. The Trunk Tracker scanners
also do not follow GE/Ericsson trunked radio systems.

You probably have a strong signal source nearby in the VHF band that is
de-sensitizing your rf pre-amp in that range, a paging site maybe?

4942. ARIZONA Scanner Listeners

Newsgroup: rec.radio.scanner

Source record: 179493
Cross-posted to: rec.radio.scanner,alt.radio.scanner

- - - - - ARIZONA SCANNER LISTENERS - - - - -

Southwest Frequency Directory's brand new 4th Edition (1998-1999 edition) is now available! The new scanner frequency and information resource will be in Phoenix and Tucson stores next week. This book is made in Arizona by local scanner "experts", for Arizona. SWFD is NOT just another national database printout...

SWFD-4 includes frequencies, radio codes, fire station resources, general public safety agency information, terminology, abbreviations, and more for Police, Fire, and Medical services. In addition, frequencies for Aircraft, Amateur Radio, Media, Hotels & Resorts, Schools, Malls, Security Companies, Utilities, and local and federal government are also included. SWFD-4 is over 300 pages, in an easy to use 8 1/2" by 5 1/2" size, with a coil bind, NOT a spiral bind like other books. By using only COIL binds, SWFD allows its users to flip pages all the way over and keep the book open to one page only, with only that page showing. This makes looking things up and programming your scanner much easier. New this edition is added line, borders, page breaks, and cardstock section seperators to make finding what you are looking for quick and easy. Also included in the 4th Edition of the Southwest Frequency Directory is talkgroup numbers for Motorola TRUNKED Radio Systems throughout the Phoenix Valley, for use with Uniden's TRUNKTRACKER scanners. With the release of the TrunkTracker scanner, a quality frequency directory like SWFD has never been more important.

Don't miss out! SWFD-4 promises to be the best and most up-to-date frequency directory there is for Arizona!

If interested, e-mail SWFD's editor at DanR@azstarnet.com

Thanks,

Dan Rollman / KC7ANQ
SWFD - Editor

> communicate on.
They could also be talking about the Mutual Aid frequencies in the
800Mhz band (though I've yet to hear anything from them in my area).
I don't have those frequencies handy as I'm at work right now, but I can
post 'em later if anyone's interested.

They haven't entirely done this. Have they come out with a trunkTacker
for the GE/Ericsson systems yet?

First, lose the caps. Second, where did you get THIS information from?
It IS true that the cellular band was increased from 666 to over 800
channels, but scanner blocks on the cell band DO cover these new
channels, and cellular companies are NOT expanding any further in this
band. Right now, the development is in PCS, which cannot be picked up by
your standard analog scanner. If you're getting "spillover" calls, then
what you're receiving are spurious images. Your scanner's is probably
dual-conversion, and is actually picking up those calls on frequencies
that are actually empty. Your scanner just isn't capable of properly
"converting" the frequencies. This is corrected in newer scanners that
feature triple conversion.

Well, as far as I can tell, it's not illegal for a person to own a scanner that's unmodified. It is, however, illegal to sell or import these scanners. So, it's kind of questionable as to whether you're bringing the scanner in is considered "importing" it. At the same time though, scanners themselves ARE legal, and I doubt a customs official would actually have the knowledge to actually verify that the scanner has cell blocks in it. Don't quote me on this though, as I've never been in such a situation, and I'm no legal authority.

My CDMA phone is 800 mhz and is 200mw max. It has a regular AMPS phone built in also (for roaming, etc.) and that uses up to the 600mw max for the analog. All in a 9 ounce package and a 1200 milliamphour battery. Not bad.

When they refer to "National" they are referring to 155.475, at least in our area. I also live the ABE area.
This freq. is shared by neighboring departments as well as the PSP so they all have a common channel to
communicate on.

You may want to try Radio Shack's bargain basement outdoor scanner antenna (catalog #20-176), which sells for $17.99. This outdoor antenna is small in size (about 20 inches high) but (in my opinion) big on performance for the money. I use one with 50 feet of RG-8 coax and a TV preamp; the antenna is mounted about 35 feet above ground and can receive almost any VHF station within 50 miles of my location. The frequency range of this antenna is advertised as being 108-1300 MHz, but I find that it works fairly well for the low VHF frequencies (30-50 MHz) also. It should provide more than adequate reception for the frequency range of your PRO-60.

Dunno about Sky but, here in Australia, satellite tv transmissions are
digital and not readable by any scanner. Well ,according to the man
who installed my dish and decoder, anyway.
I suspect the frequencies would be outside the range of ordinary
receivers, too.
Even if it was possible, you would probably need to use a specialized
antenna.
I would be interested in a more authoratative reply, though. As I
said...dunno about Sky.

I was serious about the relationship between PCS and microwave ovens.
I wouldn't think it would be safe to use PCS for a long time although
the PCS's power is very low.

do you have any ideas of power used in the microwave + power used in
the PCS ??

thanks

I am successfully running Poc32 version V1.00.19. A couple of people I know have tried to run the program, using exactly the same settings as I am, but the program won't decode messages. The box indicating reception lights up in the program and the volume level is at about 4 bars.

Has anyone else had problems setting up poc32?
How did you fix it?

Thanks in advance,

Andrew Gray.

>>easily search for the best ones wherever you go.

I believe that Amtrak generally uses the road frequencies of the railroads on which their trains are operating. If you find the road frequency you will hear Amtrak trains.

There are a couple of UHF frequencies for on-board services but I have not heard much on them except when I have been on a train. RR police frequencies can be interesting--you hear about passengers getting kicked off, vandalism, etc.

Terry,
I bought a PRO-2040 on sale at Rad Shack about a year ago; the data skip feature and the scan/search rate of this scanner is excellent. The PRO-2040 is made by Uniden for Radio Shack and is double conversion; consequently the front end is easily overloaded, especially if you live in an area with many strong signals.
According to KC5KTO's Radio Shack Scanner Modification page, the PRO-2040 cannot be modified to receive the cellular frequencies. Check out
<http://w5gb.nmsu.edu/kc5kto/base.html>
for more information about the PRO-2040.

Good Monitoring,

DAVID

>about
> getting one to complement my pro-43......

Get the "real thing" from Uniden instead. The PRO-90 is essentially the same scanner as the BC235 TrunkTracker; in fact Uniden makes the PRO-90 for Radio Shack. The BC235 is $50.00 cheaper than the PRO-90 ($249 at most retailers vs. $299 for the PRO-90), so unless Rad Shack has a sale on the PRO-90, buy a BC235 and save yourself a few bucks. The BC235 is every bit as good a scanner as the PRO-90; it might even be a better scanner than Rad Shack's "TrunkTracker" depending on who you ask.

Source record: 179614

CHRIS, ANY SCANNER THAT COVERS THE 800 MHZ BAND, EVEN THE DREADED CELL LOCKED SCANNERS, CAN RECEIVE CELLULAR PHONE CALLS, THIS IS POSSIBLE BECAUSE THE ORIGINAL CELLULAR FREQUENCY,S HAVE BECOME SO SATURATED WITH USERS THAT THE CELLULAR PHONE COMPANY,S HAVE HAD TO EXPAND THE PHONE FREQUENCY,S BOTH ABOVE AND BELOW THEIR ORIGINAL BAND ALLOTMENT,S. WHAT THIS MEAN,S IS THAT
WHILE THE CORE OF THE FREQUENCY,S ARE STILL LOCKED OUT, THERE ARE SO MANY NEW FREQUENCY,S THAT SPILL OVER INTO THE AS OF YET STILL UNLOCKED PORTION,S OF THE 800 MHZ BANDS ON THE CURRENT CELL LOCKED SCANNERS, THAT YOU CAN STILL PICK UP THOUSAND,S OF CALL,S, AT LEAST UNTIL THE SCANNER COMPANY,S LOCK OUT EVEN MORE OF THE 800 MHZ BAND THAN THEY ALREADY HAVE. THEN THE PHONE COMPANY,S WILL EXPAND THE FREQUENCY,S UPWARD ONCE AGAIN, AND THE DOUBLE CELL LOCKED SCANNER,S WILL BE ABLE TO HEAR THEM ONCE AGAIN, AND SO ON, AND SO ON !

IT,S TOO BAD THAT YOUR SCANNER CAN NOT PICK UP THE 800 MHZ BAND AT ALL, BECAUSE IF IT DID, EVEN UNMODIFIED, YOU WOULD PICK UP HUNDREDS AND HUNDREDS OF CELLULAR PHONE CALLS.
AND THERE,S ALWAYS THOSE SWELL 900 MHZ CORDLESS NON CELLULAR PHONE CALLS.

TRY A DOWNCONVERTER FROM RAMSEY ELECTRONICS, IT WILL PUT SOME EARS ON YOUR LITTLE MUD DUCK RADIO.

>
>I would like to know how to modify my realistic pro-2023 so I can
>receive the 800+ frequencies. Does anybody know how to?

According to KC5KTO's Radio Shack Scanner Modification page, there are no mods which will enable the PRO-2023 to receive the 800 MHz frequencies. Check out <http://w5gb.nmsu.edu/kc5kto/base.html> for more information about the PRO-2023.
One way which you could possibly add 800 MHz coverage to your PRO-2023 is to purchase a converter which attaches to your scanner and allows scanners which don't receive the 800 MHz frequencies to receive 800+ MHz by way of frequency conversion. Grove Enterprises and some other scanner dealers have sold frequency converters in the past, but in the wake of the anti-scanner/cellular monitoring hysteria, they may have stopped selling the converters. Try <http://www.grove.net> and see what you can find. Good luck.

5002. Re: Trunk...

Trunking is the practice of controling a group of frequencies to create virtual channels (talkgroups). This is done by having data frequency that controls all radios in the system. The data frequency tells all the radios in the group where each channel (talkgroup) is going to be placed on a frequency each time that channel (talkgroup) is accessed by a user. So what you get is a radio system that say consists of 10 radio frequencies but has 100 channels (talkgroups). This was created to save radio spectrum and allows more effective use of the spectrum.

As far as listening to it, it sounds just like conventional voice radio traffic except the same coversation will rarely land on the same frequency, this makes it difficult to follow what is going on.

Welcome to the world of the famous PLL CHIP MODIFICATIONS for CB radios.

How many times have you seen a CB radio at a garage sale, flea market, or maybe in your own collection, and then asked yourself," what could be done to this radio to make it worth fixing or selling?" Let me explain alittle about PLL chip modifications and why they are ever so popular. The PLL chip of a CB radio is one of the many features that control the operating channel and frequency depending on where the channel selector is positioned. From the factory, CB radios are manufactored and sold with a specified frequency range to insure proper FCC regulations. CB radio hobbiest & hackers soon found out that, just by altering the voltages on the PLL chip, they could transmit & receive on more channels.You may be asking yourself," can this done to any CB radio?" NO, not every CB Radio can be altered in this manner, simply because the FCC imposed stiffer regulations on the manufactorers of CB radios." How do I know which radios can easily be modified", you ask. I have spent many, many hours putting together information on 100's of different CB Radios and the PLL chip modifications. This information consists of (3) very important factors. 1. Which CB radios to look for. 2. What PLL chip the radio has installed from the factory. 3. (Most important) complete, simple to follow instructions, diagrams, and channel charts. You could spend hundreds of dollars to have these modifications done by someone else and the bad part about it is, you may never know what was done to achieve the modification. Now, you can have the information on the 100's of CB radios out there and how to modify them, at your fingertips. You would probably expect to pay well over $50.00 to have this information, and beleive me, the information contained in this packet is worth every penny when you start learning the tricks of the hackers. THE PRICE FOR THIS INFORMATION PACKET IS ONLY $15.00 That's right!! That's what alot of people charge just to tune up a CB Radio, imagine what they would charge to do a channel modification.

Here's how to order your information packet:

Send $15.00 to:
TEAMWIN 01
P.O. Box 0583

Bryan:

I am selling it because I spent way too much money on my new toy, a digital camera!

The scan speed, as most know, is not the fastest in the industry, it's 16.7 ch/sec programmed, and 6.25 ch/sec memory. It's really not intended to be used that way. It has several features above and beyond the normal scanner, and is used more as a portable wide band communications receiver. Those who understand it's capabilities like it, those who look only at the scanning speed criticize it.

Hi,

I was listening to the LAPD recently and notice that they are using some new TAC frequencies. They are called TAC 6 B and TAC 6 C which are identified by the dispatchers as being channel's 187 and 188 on the "rover". I presume there are "B" and "C" now for the other TAC's too.

Does anyone know what frequencies these correspond to ?

Thanks

Rider

Sure there is. Even if it's a bogus return address you can still find
out their ISP. In Netscape simply click on VIEW, then DOCUMENT SOURCE.
Then look in the MESSAGE ID and viola, there's their ISP listed. Give
it a try!

I'm not sure how it works in MISE or other newsgroup readers.

5016. Yupiteru MVT-7100 for sale

Newsgroup: rec.radio.scanner
Date: 1997-11-25 00:00:00 UTC
From: gary evans <garyevans@erols.com>
Message-ID: <65foovepk1@winter.news.erols.com>
Source record: 179431

Just received my Yupiteru MVT-7100 last week. It's awesome! Now I'm looking to go to the next level and purchase the MVT-9000. I'll sell my Yupi MVT-7100 for $350. I know that this newsgroup spans the world, but my first preference for sale would be for someone living in the NJ area to come and pick it up. Barring that, my next preference is to sell it prepaid in the USA. No, I won't ship out of the US.
Price is firm. You need only reply if you are serious.

Tim,
You are entitled to your opinion of course, and I am entitled to mine. It wasn't spam. It was an informative message about a non-profit organization. Of the 30 or so groups it could be relevant too. It was only posted to six. Have you never heard discussion about listening to satellites or MIR in the scanner newsgroup, or the SWL who listens to shuttle communications on his shortwave transmitted by amsat members at the Goddard amateur radio club in the shortwave newsgroup? Amsat is a place where information can be exchanged to help someone enjoy their radio hobby, whatever that might be.

>Thanks.
>Vince

The 12A3 indicates a December 1993 manufacturing date. Since there were NO U.S. Pro-2006 scanners manufactured past April 1994, it is probably a fairly late unit.

Keep in mind the the Pro-2006 was still made for other parts of the world and Canada after the April 1994 date.

If you aren;t aware, April 1994 was the date that the ammendments to the Electronic Communication Privacy Act took effect. These made it illegal to manufacture or import receivers or scanners capable of receiving cellular telephone frequencies (or easily modified to do so).

The devices are fairly sensitive, however, you must consider what is
the strongest signal in your area? It most likely is a commercial TV or
radio station and that is what your freq counter will lock on everytime
unless you are really close to the source of another signal.
It is hard to override the powerful megawatt signals of TV stations!

> Liberal is.

Bill Clinton is a prime example of a liberal.
Liberals believe that you are stupid and that government is god.
Therefore, they want to use government to control you for your benefit
They often believe that the Constitution allows you too much freedom.
However, the Constitution does not allow you jack. It only recognizes
the God given rights you already have, Constitution or no
Constitution.
This is why liberals are very ready to take away our scanners.

Because they think they know better how to run our lives.

Especially those on the Donkey side of the isle (for those of you in
Rio Linda, that would be the Democratic party). For they are the ones
who have tried to take many things away from the American public.
They alone passed:
Brady Bill
Assualt weapons ban.
The largest tax incrase in history.
The have attempted to bankrupt the tabacco industry while giving it tax
dollars!
So, dont doubt for a minute that DEMOCRATS will come after your
scanners.

I just installed my copy from Scanner Master
and I'm having problems. I've installed the software
and did the hardware config (COM port setup). I did the
reboot and tried to start the program, I get a DOS box
that says insufficient memory (I have 32meg).

This also happened to me about a week ago when I
downloaded the demo version of scan star. I believe
that program did something to my files. that's why
its happening on the 895 version. I did delete the
demo but it must have changed something.
Please help, I paid for the software and cable
and I can't even use it.

Brian

Good advice. If desired, you can build pretty much the same antenna
with #12 solid copper wire an SO-239 connector and a few #4 machine
screws & nuts & washers, cut 1 piece of wire to 19 inches and 4 to 20
inches. Form a loop on the ends of the 4 @ 20 inch wires to fit
around the #4 machine screws. Attach to the mounting plate of the
S)-239 using screws, washers and nuts. Then solder the 19 inch wire
into the center pin. Voila, instant ground plane antenna! Note that
this is for indoor or attic use only, it will not hold up to outside
weather. How you mount it is up to your situation, but a short length
of pvc pipe (3/4-inch) is fine, drop the cable in one end and then
connect to the SO-239 and then orient with the antenna on top, it will
rest on the pvc pipe, it can then be installed in the attic using a
variety of store-bought or home made devices.

Good luck,
Howard

You may need to tap the audio signal you are feeding to the sound card. In some scanners the audio signal you get at the speaker output is filtered to improve the signal to noise ratio (restricted to speak bandwith) or you could have a shitty audio stage. Anyway the FSK data of the pager signals are a lot better directly from the detector. I suggest you seek out a local radio ham or someone who could help you tap this signal off.

PS If you let all the smoke out of the chips in you scanner it will not work any more.

5057. Christmas Spirit

Newsgroup: rec.radio.scanner
Date: 1997-11-25 00:00:00 UTC
From: beaker <gregf@tig.com.au>
Message-ID: <65ee76$q1u$1@toto.tig.com.au>
Source record: 179544

PLEASE READ THIS ENTIRE DOCUMENT BEFORE MAKING ANY JUDGEMENTS ABOUT WHAT IT'S ALL ABOUT.
Christmas is just around the corner. WOULDN'T IT BE NICE TO MAKE A FEW EXTRA BUCKS to fund all those extra presents you want to give??? Everyone would like to have a few extra dollars for some of the finer things in life, or maybe just the normal things...Here's one way to make some of that money with just a little effort, and yes, IT'S LEGAL! So long as you follow the correct procedures. You are basically purchasing a service. A little while ago, I was reading my newsgroups, like you, and I kept seeing all these "Make $$$ Fast" letters, so I thought to myself "yeah right, just another scam" but this one said you could make thousands of dollars within just a few short weeks for ONLY $6 plus postage. That's right, $6. Well for only $6 I had to find out if there was any truth to what ALL these people were saying, so I kept reading. Anyway, it said that if you send $1.00 American to each of the 6 names and addresses stated in the article, you could make thousands in a very short period of time. You then place your own name and address at the bottom of the list at #6, and post the article to at least 300 newsgroups.(There are about 25,000.) No catch, that was it.

Even though the investment was a measly $6, I had three questions that needed to be answered before I could get involved in this sort of thing.
1. IS THIS REALLY LEGAL?? I called a lawyer first. The lawyer was a little sceptical that I would actually make any money but he said it WAS LEGAL if I wanted to try it. I told him it sounded a lot like a chain letter BUT the details of the system (SEE BELOW) actually made it a legitimate legal business.
2. Would the Post Office be OK with this....I called them:1-800-725-2161 and they confirmed THIS IS ABSOLUTELY LEGAL! (See Title 18,h sections 1302 NS 1341 of Postal Lottery Laws). This clarifies the program of collecting names and addresses for a mailing list.
3. Is this moral? Well, everyone who sends me a buck has a good chance of getting A LOT of money ... a much better chance than buying a lottery ticket!!!

So, having these questions answered, I used 6 Envelopes... Six $1 American bills... Six pieces of paper and six postage stamps ...and boy am I glad I did !!! Within 10 days, I started getting money in the mail! I was shocked! I figured it wouldn't last long, and didn't give it too much thought. But the money just continued coming in. After the second week I had made about $30, and for spending less then $10 in total, envelopes, postage, paper and $6.00 I was more than happy, but it didn't stop there. The money just kept coming and by the end of the third week I had a made just under $1,000!!!!! and it is still growing. This is now my fourth week and it's still coming in.....Some people have reported up to $50,000.00 by the end of the fifth

week and I'm not so sure I doubt them. It's certainly been worth $6.00 U.S. for me!!! The *ONLY* thing stopping *ANYONE* from enriching their own bank account is pure laziness! It took me all of 5 MINUTES to print this out, follow the directions, and begin posting to newsgroups. It took me just under an hour to post to over 300 newsgroups. And for this Small Investment and less then ONE HOUR of my time, I have reaped an incredible amount of money'Like nothing I ever thought was REALLY possible!'Let me tell you how this works, and most importantly, why it works. Also, make sure you print a copy of this article now so you can get the information off it when you need it. The process is very simple and consists of THREE easy steps.

==========
HOW IT WORKS
==========

STEP 1:
Get 6 separate pieces of paper and write the following on each piece of paper (it is very important you do this):

PLEASE ADD ME TO YOUR MAILING LIST.
US$1 PROCESSING FEE IS ENCLOSED
NAME
Address Line 1
Address Line 2
Address Line 3

(THIS IS THE KEY AS THIS IS WHAT MAKES IT LEGAL SINCE YOU ARE PAYING FOR AND LATER OFFERING A SERVICE).
Now get 6 $1 American bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope to prevent theft/robbery. Then place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase and a U.S. $1.00 bill. Mail the 6 envelopes to the following addresses:

#1 SL Enterprises
173 Chasewood Lane
Buffalo, NY 14051

#2 MANAGER
6466 RED COACH LN
REYNOLDSBURG,OHIO
43068 USA

#3 Rob F.
507-222 Nonquon Rd.
Oshawa, ON, CANADA
L1G 3S6

#4 John
11/197 Auburn Hawthorn
Melbourne Vic.

Australia 3122

#5 M Howard
PO BOX 30-362
Lower Hutt
New Zealand

#6 Greg F
4/103 Constitution Road
MEADOWBANK NSW 2114
AUSTRALIA

STEP 2:
Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list. (If you want to remain anonymous, put a nickname, but the address MUST be correct. It, of course, MUST contain your country, state/district/area, zip code, etc!!! You wouldn't want your money to get lost in the mail, would you?!?!).

STEP 3:
Now post your amended article to at least 300 newsgroups. Remember, 300 postings is just a guideline. The more you post, the more money you make! If you don't know how to post messages to a newsgroup, just refer to the help file of your browser or news reader. You can post to multiple newsgroups in one go by holding the shift key while dragging your mouse over the list of newsgroups, which selects all these newsgroups.
REMEMBER, THE MORE NEWSGROUPS YOU POST TO, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 300
That's it! You will begin receiving money from around the world within day's! You may eventually want to rent a P.O. Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

==========
Now the WHY part:
==========
Out of 300 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #6 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 300 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 00 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 300 with my name at #3 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 300 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 300 newsgroups with my name at #1 and if still 5 persons per 300 newsgroups react I will receive $15,625,00! With a original investment of only $6.00!

AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #6 $15.00
at #5 $225.00
at #4 $3,375.00
at #3 $50,625.00
at #2 $759,375.00
at #1 $11,390,625.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again. The thing to remember is, do you realise that thousands of people all over the world are joining the internet and reading these articles everyday, JUST LIKE YOU are now!! So can you afford $6.00 and see if it really works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet.
Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest.
** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 6 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars. Make sure you print this article out RIGHT NOW, also. Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly. Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!! GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. Please remember to declare your extra income. Thanks once again...

==========
LEGAL ? ? ? (Comments from Bob Novak who started this new version.)
"People have asked me if this is really legal. Well, it is! You are using the Internet to advertise you business. What is that business? You are assembling a mailing list of people who are interested in home based computer and online business and methods of generating income at home. Remember, people send you a small fee to be added to your mailing list. It is legal. what will you do with your list of thousands of names? That's up to you." So, build your mailing list, keep good accounts, declare the income and pay your taxes. By doing this you prove your business intentions. Keep

an eye on the newsgroups and when the cash has stopped coming (that means your name is no longer on the list), you just take the latest posting at the newsgroups, send another $6.00 to the names stated on the list, make your corrections (put your name at #6) and start posting again.
==========

NOTES: *1. In some countries, the export of the country's exchange is illegal. But you can get the license to do this from the post office, explaining the above statements (that you have an online business, etc. You may have to pay an extra tax, but that's OK, the amount of the incoming money is HUGE! And as I said, a few countries have that restriction.
*2. You may want to buy mailing and e-mail lists for future dollars. (Or Database or Spreadsheet software.)
*3. If you're really not sure or still think this can't be for real, please print a copy of this article and pass it along to someone who really needs the money, and see what happens.
*4. You will start getting responses within 1-2 weeks, it depends.

I believe this message is telling you that you
have insufficient base memory available. Has
nothing to do with the amount of RAM you have,
which is 32M in your case.

It needs to load the program into the base
memory of which initially 640K is available.
Once you start DOS, Windoze and add other programs
and utilities, the 640K limit will be lowered
by the amount of memory these programs/utilities
take up. If there is not enough memory left to
load the base 895 software, then you will get
this error.

From DOS, use the 'mem' or 'mem /c' command
I believe it is to see who is using up the
memory and how much is available of the
original 640K block(not counting EMS/XMS
memory regions). If the 'free' amount is
less than the minimum needed by the Scanner
Master software then this is your problem.
You'll need to remove some drivers/utilities
(thus freeing more memory for use) in order
to get it to run.

Not sure if a PIF file can help. Perhaps a
Windoze guru can help you out there.

Strong signals,

No not yet, but the original question asked if there was a solution
for following trunked conversations on the Witchita KS system, which
is Motorola.

> Scan*Star does and works on many different radios, both handheld and
> stationary. So what's so special about Winradio's Spectrum Scope?

I don't have "Scan*Star" to be able to tell. WiNRADiO's is pretty good,
in many ways, not only from the spectrum analysis perspective, but from
click & tune, saving the spectrum graph to a file for future reference;
and a dozen more little goodies.

Software (which is what Scan*Star is) can't solve hardware issues. Even if
it has spectral viewing, the quality of that view is totally dependent on
not only the radio but also the tap point where the signal is taken for
processing to a graphic screen.

Scan*Star would be in an entirely different league altogether, being
software......

5063. NO MORE AOR Scanners

Newsgroup: rec.radio.scanner
Date: 1997-11-25 00:00:00 UTC
From: jr2@usaor.net
Message-ID: <347B19CE.64FD@usaor.net>
Source record: 179550

I have been trying to purchase a keyboard for an AOR AR-2002 scanner. I have tried the US distributor, the UK distributor and I even written to the Japan manufactur but to no avail.

Now i'm sorry I bought this AOR scanner. Although it was a good price for the used scanner, and I knew the keyboard would need replaced I didn't think it be this much of a problem buying the part.

I would suggest staying away from the "AOR" brand of scanners, the parts are to hard to come by.

IF anyone knows where I can purchase a keyboard for an "AR-2002" AOR scanner, please post it.

Thank you

Hi guys, as u know, I'm looking for an HT1000 or GP300 VHF 16ch. radio! Have been watching the posts, and am ready to buy. I've noticed a lot of GP300's going in pairs, this would be nice as well. Will offer $300 for good HT1000/batt/rpd. chrgr. and roughly same for pair of GP300's in good shape. will also offer partial trade of items previously posted by me! Prefer newer models 'c' or so (ht)... Please email and let me know what u have and we'll talk. remember to remove the spam filter as listed below when replying!
thanks!
Randy

I myself do not find it to be 'spam'. To me spam is unrelated junk
mail.

The P3D satellite is built with and run by donations from Hams like
myself. And it is the most expensive ham satellite ever.

SWL's will be able to listen to P3D and should find it very enjoyable.
Hams worldwide will be able to work P3D with low power and easy to
build antennas.

Forget that "spam 200 newsgroups" idea...

Forget that free Internet access crap...

Throw away those calling cards!

Throw away those catalogs!

Stop calling and pestering your friends to join some MLM!

And for God's sake THROW AWAY THAT CHEESY COLOGNE!!!!

DO YOU WANT TO MAKE MONEY FAST???

Of course you do, we all do !!! Here's how to do so with little effort, and, yes IT'S LEGAL. (to a point)

First you need a bullet proof vest. And some masks. Guns help but they're not necessary. Finally, you'll need three suckers-er, um, friends to join you.

Now, what you do is you go into any bank and yell and scream and make tons of noise. Break things, push people around, shoot your guns, basically raise hell until the cops show up.

Once the police arrive, tell them you want 1 million dollars, a helicopter, a monster truck with a tilting bed, a 5,000 gallon fish tank and 300 tons of pop tarts. This will definately get the attention of your target audience: the news crews.

Once the news reporters arrive, get on the phone to the news stations and offer live interviews to the highest bidder. Banks have lots of phone lines, so you can conference them in. Get your pals to call hard copy and the enquirer, they'll want a piece of the action!

You should have a few hours of negotiation time before the cops finally bust in and take you down. But we're not done yet! Oh no! Start yelling at the cops and calling them names. Keep insulting them until they beat you to a pulp. Then you sue, sue SUE!!

Finally, after your release from prison, hit the talk show circuit. Go on Sally, Geraldo and Oprah and tell them how society at large is to blame for the crimes you were forced to commit. Then plug your autobiography: "I'm the bank robber you saw on hard copy"

If you do it right, you might even star in your own made-for-TV movie! (Mo' money, Mo' money, MO' MONEY!)

Personal Disclaimer: If any of you get arrested, beaten, deported or killed because of this posting, I claim no responsibility for your actions. Furthermore, any such lawsuit will be answered by a countersuit alleging theft of my idea. You have been warned.

-Phil

1) Why are HF band HAM radios more expensive?
Answer-That's a tough one, my guess would be that it is due to less production on them, increasing the cost per unit of manufacturer. After all they are really only any good with the correct sunspot cycle.

2) What is HF band?
Answer-HF stands for High Frequency as opposed to VHF (very high frequency) and UHF (ultra high frequency). Due to it's low frequency (long wavelength) it has the ability to stretch TREMENDOUS distance. (Like Wyoming to Japan). Becuase of this innate ability, HF uses lower power than VHF and UHF. It's downside is that it doesn't penetrate buildings and other structures incredibly well.

3)Is it more powerful?
Answer-Maybe yes, maybe no-see above.

4)Do I need....
Answer-If you have to ask this question then I MUST assume that you do not have an Amatuer Radio Operators License that is required by the FCC prior to any type of transimssion on these RESTRICTED frequencies. HF would probably not be practice for use as an emergency radio. After all if you are in Alaska and are talking to someone in Germany odds are pretty good that they are not going to be of much assistance to you.

Hmmm, you don't have some extra length in that cable do you? Perhaps you coiled it up and stuck it behind the desk. If you do, get rid of it-it is forming and inductive loop and charging up which is blocking the signal. When you touch it and disconnect it it discharges and then you hook it back up and it starts over again. I would suspect that the difference in charge times is due to what you antenna is getting (F's and static charge)
I am not sure on this so please do not flame the living crap-o-la out of me if I am wrong, just a guess.

You know I am sure that you are a very nice person who is looking for some help with a problem that you do not understand. However I cannot help but to be inclined to think that you would be better serviced by a TV REPAIRMAN rather than a Internet News group whose basis is SCANNERS. Try Alt.TV.IM.CLUELESS.

> hard to beat. It's cheap, but it is low loss.
>
Depends on the frequency. Below is a table of losses for different
types of coaxial cable in dB per 100 ft.

Cable type RG/U 10 50 100 200 400 1000
==========
75-Ohm
RG-59,59B 1.10 2.40 3.40 4.90 7.00 12.00
RG-6 .04 1.90 2.70 4.10 5.90 9.80
RG-11,11A .66 1.60 2.30 3.30 4.80 7.80

50-Ohm
RG-58 1.25 3.15 4.60 6.90 10.50 17.50
RG-58A,58C 1.40 3.30 4.90 7.40 12.00 24.00
RG-8X 1.10 2.50 3.70 5.40 8.00 13.50
RG-8,8A,213 .55 1.30 1.90 2.70 4.10 8.00
Belden 9913 ** .64 1.00 1.60 2.50 4.50

Contrary to what you say, RG-8 cable offers superior performance
to RG-6 from DC to above 1000 MHz. However, it is thicker and more
expensive.

> Some people will try to tell you to get a preamplifier to boost
> those weak signals. Preamps for scanners are generally a waste of
> time and money. For a variety of reasons, they don't work right,
> and often cause more reception problems than they correct. Save
> your money.
>

This is misleading at best. Most hobbyist scanners (including the
famous PRO-2006) can benefit from additional RF preamplification
with a major caveat. If you live in an area with strong RF sources
nearby, additional preamplification may overload your radio.

If you don't believe me, try this simple experiment. Go find yourself a high quality synthesized signal generator (e.g. HP8660 or similar) and set its output to 10uV or so at a frequency your scanner is capable of receiving. Next, turn on the modulation on the signal generator so you have something to listen to. Now, back off the output of the signal generator until you can just barely hear the modulation above the hiss. Finally, insert the preamplifier in between the signal generator and the scanner and turn it on. See if you don't hear a significant improvement in signal to noise ratio. I have tried this on several different scanners, including a Pro-2006, Pro-43, AR8000, and BC9000XLT and in every case there was a significant improvement. I used a homemade preamplifier based on a Mini-Circuits MAR-4 module. Commercial units of similar or better quality should yield similar results. I have not tried the cheap $19.95 preamps that Radio Shack sells, so I can't comment on how well they work.

Preamplifiers are especially useful when you want to listen to UHF frequencies (especially at 800MHz and above). However, you must use them properly. Although they may be helpful when installed between the cable and the scanner, preamplifiers work best when they are installed between the antenna and feedline (weather-proofed if necessary). Even the best coaxial cable (such as Belden 9913) has significant losses at the higher frequencies. In addition, thick, stiff cable such as 9913 is difficult to work with and conceal in your home.

The approach I use which is working extremely well for me is to use a relatively small, flexible coaxial cable (RG-6 in my case) and a mast-mounted preamp (power is supplied as DC along the coax). The gain from the preamplifier (~20 dB for mine) more than offsets the cable losses of the RG-6 and also more than offsets the 6dB+ loss my 2-way signal splitter introduces. As a result, I get excellent reception from 15-20MHz up through the 1.2GHz Amateur band (and probably higher -- I haven't tested it above about 1.2GHz so far).

By way of a comparison, before I installed the preamp, I used Belden 9913 to connect my antenna to radio. After switching to a preamp and RG-6 (higher loss), I noticed an increase in signal strength of several UHF channels I regularly listen to and I was able to hear several more I could not make out in the past. This improvement was noted over several months and could not be due to variations in atmospherics.

> Stick that antenna up higher, and use a good grade of coax feedline.

Your mileage may vary.

5084. Question to PRO-2006 users re: 10db ATT switch

Newsgroup: rec.radio.scanner
Date: 1997-11-26 00:00:00 UTC
From: Vincent Charron <charv@globetrotter.qc.ca>
Message-ID: <347CBE70.5D93@globetrotter.qc.ca>
Source record: 179321

I have my PRO-2006 connected to the new Radio Shack Discone antenna (with 50 mhz vertivcal) 40 feet of the ground using RG-8 coax to the back of the scanner.

All of my aviation-AM and up to apx 170 mhz FM signals are extremely weak with the att switch off. With the attenuator switch on 10db, all aviation-AM and FM freqs in the broad 140-170mhz range are much stronger.

I notice little effect on signals in other bands with switch in either position.

Can anyone confirm that they are experiencing the same situation? If anyone can explain....I'd appreciate it.

Thanks...
Vince (new-to-me= PRO-2006 owner)

Just got my ICOM R8500 today. So far I'm extremely pleased. It has quite a few features that will take some time to absorb.

Are there any Web pages out there for the R8500? Also, I have a metal roof and no real place to put a wire antenna for the below 30Mhz spectrum. Any suggestions?

>I dont purposely interfere with other stations, i find a blank spot between 6.8 and 6.9 >mhz LSB and talk talk talk

....and that's the point of a license. You don't purposely interfere, but you might without knowing it and that's where the FCC has a real beef. As far as free speech the FCC could care less, but in order to prevent total anarchy on the airwaves they need to let you know where you can and cannot transmit. Look at CB, which is now an unlicensed radio service. It's a mess.

Keeping you from transmitting on SW wherever you please is not a free speech issue, it's a frequency allocation issue.

Once you are licensed and given a spot on SW to transmit legally then you can have all the free speech you want, or you can transmit a dead carrier 24 hours a day - the FCC does not care.

Free speech doesn't mean "free" from a dollar amount, i.e., not paying for that license.

Broadcasting wherever you want on the SW bands and risking tromping on a license-paying station is no different than spray painting your political views over a storefront that someone else is paying rent for. They are not happy with you for doing it, and you wind up looking like a boob. The cops might eventually catch you if you do it a lot.

You pay your rent for your own small storefront and you spray paint it as much as you want and no one will bother you.

Get a license and stop whining about your freedom of speech being tromped on.

Like new Pro-51, this unit has seen very little use and is in mint condition, able to receive full 800Mhz, $200.00 O.B.O., makes an excellent stocking stuffer.
Buyer prepays shipping, can C.O.D. for the balance. Please, no ridiculous offers.

I initially had problems too. I picked up some tips at the following page:
www.deakin.edu.au/~amsm/rad_ute.htm

I found that my problem was all in the volume. It seems the program is
very picky about sound levels. A level that will work on one machine may
not neccesarily work on another.

I have a 486dx4-100 with scanner headphone output connected direct to
soundcard input.
I am able to decode with level bars just over half-way. I can only get
.5kb. 1.2kb or 2.4kb probably would need a direct connection to the
discriminator.

Just keep fiddling with the sound levels and with any luck you'll crack it.

: >Could someone tell me if the serial number on a PRO-2006 of 055360 (12A3
: >man. code) means it a late or early unit?

: Doesn't really matter since ALL 2006s are fully modifiable.

: "Where's that big 'ol CB RAMBO??"
: "I wanna hear him TALK TOUGH!!"

It makes little difference-the easiest way to tell older from newer, is to look at the light button-the old ones just dimmed the backlight-the later ones shut the backlight OFF.
These are slightly preferable, as the backlight lasts way longer if it is shut off when it is not needed.
Also, the catalog # on the newer ones have an "a" on the end

5105. Cellular Phone Question Anyone?

Newsgroup: rec.radio.scanner
Date: 1997-11-26 00:00:00 UTC
From: cellular <ydconcepts@rocketmail.com>
Message-ID: <uzzlRHn#8GA.239@upnetnews02.moswest.msn.net>
Source record: 179378

I can not remember what newsgroup I saw it in but there was a discussion about a certain type of cellular phone. If my memory serves me correctly the cell phone
was very thin. The phone was capable of entering my own encryption code but the other phone that is being dialed needed to have the same encryption code. I am looking for this phone and was hoping someone here can help me in finding it.
I also remember this cell phone can dial directly another cell phone of the same type. If I remember right the phone would go to the satellite and then to the other phone. Possibly using CDPD tech. (Cellular Digital Data Packets technology)

Basically, I am looking for a digital cellular phone that I can encrypt beyond 128 bits and, I can
enter my own encryption key (code). That way nobody can listen in on the conversation. I want digital encryption not some analog scrambler.

Can anyone help me?

Thanks for the help.

5110. 9000XLT Record Feature Experience?

Newsgroup: rec.radio.scanner
Date: 1997-11-26 00:00:00 UTC
From: trinit69@idt.net.nospam
Message-ID: <trinit69-2611970752210001@ip73.lafayette.la.pub-ip.psi.net>
Source record: 179383

I'd like to correspond with anyone who has successfully used the record feature on the 900XLT.

This involves using the contact closure output on the back of the set to start a recorder via the recorder's remote jack.

Naturally, remote jack equipped recorders are hard to find anymore with the advent of VOX being so common now.

My VOX recorder has neither a mic input nor a remote jack and I'd have to buy a new recorder to use this feature.

The VOX tape works OK, save for the fact that a ringing telephone, vac cleaner, or kids get recorded as well (so do burglars, though).

Comments on the use of 9000XLT record feature?

Dav-id, you're close, but have missed the boat (There! On topic at last).

The concept that the ignorant masses need to be taken care of is more along
the lines of a Jeffersonian Democracy than liberalism. Why Jeffersonian
policies seem to mostly effect those who spend thier time listening to
the scanner while cleaning thier assault rifles is left as an excercise
for those who can read.

<<<<<<Typical Mackey Crap Deleted>>>>>>>>>

Jack,
John-BOY has ben doing this routine for over 2 years now. He is an uneducated bedpan wrangler that was picked on as a child. He finally is able to hide behind a keyboard and be one of the bullies. What John-BOY doesn't realize is school is over and he isn't (at least physically) 12 years old anymore. Oh yea, John-BOY rarely says anything truthful or factual. He lives in his own fantasy world as his posts show.
As to John-BOY and Bill Cheek, Cheek was (is?) a moderator on the Fido Scanning Area. John-BOY behaved the way he does here on Fido and they booted him off. He blames it all on Chek but his own BBS SYSOP agreed and pulled the plug. John-BOY of course will lie and cry but a review of his last 200 posts pretty well explains it all.
You will notice John-BOY never posts his Sprint E-mail address, where he generates his 200 worthless posts a month. If he made it public, Sprint would be shut down by the flood of complaints and he would lose his access. John-BOY even has to use a PO BOX number for his ham license because so many Hams hate him he has to hide.

Just received my RELM MS200 so it's sure to be
a Happy Thanksgiving here!

Thanks to Ken and all the great people at
Communications Electronics Inc. for getting
it to me so quickly! If you'd like to order
your own MS200, give them a call at
1-800-USA-SCAN! Price is $237 delivered to
your door! Can't beat that with a stick!

Posted some basics to my radio web page and will
hopefully have some first impressions soon!

So stop by http://www.qsl.net/n2mca/RADIO.HTM
and of course, happy monitoring!

Strong signals,
Rich N2MCA http://www.qsl.net/n2mca/

VTech also makes several cordless 900mhz digital modes that heve
speaker phones and caller id with call waiting caller id. I found that
they are much better than the Sony phones, especially where battery
life, clarity, and range are concerned. I know of two paces on the net
that carry them. Depending on where you live one may be less expensive
then the other (tax, shipping, and stuff.)

First, the FCC regulates the U.S. airwaves. (Executive Branch)
Second, the FCC is empowered by the U.S. Congress to do that job.
(Legislative Branch)
Third, the Supreme Court held, in FCC vs. Pacifica, that the Federal
government has the constitutional power to regulate the airwaves. (Judicial
Branch)

So, all three branches of government disagree with you. Free Speech does
not include a right to transmit radio signals wherever and whenever you
want. It does, however, guarantee you the right to use profanity and
misspelled words in your newsgroup messages.

wishful thinking. There are substantial improvements from getting the
antenna above the local obstacles. Once you do that, range is line of
sight, which in miles is approximately the square root of the height
in feet. YOu tend to do a little better than that because the other
user's antenna isn't at zero height. If both the transmitter and the
receiver are at say 40 feet, that is about 13 miles. If you put them
both at 100 feet, it is 20 miles. according to the fomula it should be
between 65 miles and 200+ miles. I can assure you it isn't. If it was,
there would be no need to put TV transmitters on mountain tops, or use
1000 foot tall towers.
>
>Next most important is the quality of the coaxial cable or feedline
>from the antenna to the scanner. It won't make too much difference
>if the length is 20-ft or less, but any longer, and a LOT of signal
>can be lost in the cable before it ever gets to the scanner.

IT very much depends on the frequency and the coax you use. Some
RG58/59 is better than others, but none of it is real attractive.
100 feet of RG59 at 500Mhz loses about 8db, this 80% of the signal.
100 feet of RG59 (air core dielectric) at 500Mhz loses about 5db,
which is 60% of the signal

100 feet of RG58 at 500Mhz loses about 14db, this is 95% of the signal
100 feet of Belden 9913 at 500Mhz loses about 3d b, which is 50% of
the signal.

Not all coax is made the same way, at VHF and UHF frequencies the
quality of the dielectric core, and uniformity of the braid shield are
very important, and the the dielectric does deteriorate withage.
Translation, buy a brand name cable, and buy it from someone who sells
a lot of it. A coaxial cable that has been on the reel for 5 years
probably isn't very useful for UHF service.

If you can afford, use Heliax or some other semi-rigid cable. In
general the larger the cable diameter, the lower the loss.

Higher frequencies get worse, lower get better. Rule of thumb is the
loss goes up by about 40% each time the frequency doubles. If you are
not interested in frequencies above 200Mhz, it probably doesn't make
much difference what kind of cable you use. If you want to eavesdrop
on cellular conversations (800Mhz). It makes a big difference.

As with all transmission lines, the shorter the cable, and the fewer
the connections involved, the better.
>
>RG-58 and RG-59 cable sucks for scanners. Stay away from that stuff,

probably good advice
>
>Some people will try to tell you to get a preamplifier to boost
>those weak signals. Preamps for scanners are generally a waste of
>time and money. For a variety of reasons, they don't work right,
>and often cause more reception problems than they correct. Save
>your money.
The problem with any pre-amp is that boosts noise, and adds its own
noise as well. Good pre-amps belong at the base of the antenna, not in
front of the scanner and the usefulness is pretty much limited to
undoing the losses in the cable.
>Stick that antenna up higher, and use a good grade of coax feedline.
Latter is better advice than the former.

Which is a very wonderful thing when your lossing about 40 to 80% of
your signal!

Find a well made, wide band preamp and place it at the very base of
your wide band antenna which is as high up as you can place it. Use
high quality satellite cable. Walmart sells some fine cable in their
stereo/tv connection area for $18.00 that works very very well on my
very wide band antenna.

Preamps bring in ALL signals, both wanted and unwanted. They are
best used for the most distant frequencies, thus, you might consider
having an on/off power switch for the preamp. Be mindful of the fact
that local strong signals with a great preamp may swamp your scanner due
to too much incoming signal. That will totally undo your hard work sinc
the scanner drops all of that extra signal and now you will be able to
hear very little coming out of your speaker! So, when listening to
distant signals, turn the preamp on and off to gauge the difference.
This is the point at which you will notice if the preamp is doing you
some good.
And, while your at it, try to listen to all the government officials you
can. They really hate it when the people who elected them, and who fund
their paycheck listen to what they are doing! HAVE FUN!

>scanning simply because that sets the course for more restrictions down
>the road!

Bullshit, It's the conservative morons who want to destroy scanning.
Just ask Newt, as I recall, he's the conservative moral moron
Republican who got caught by a scanner.

The liberals are just tired on stupid scanner idiots creating
embarrasing situations. But they aren't the ones proposing this
idiotic legislation. The real problem is people with the attitude that
'liberals' are to blame for the worlds problems.

Liberalism actually has a lot to be proud of but I'm not going to go
into that here.

I dunno, a ruling was just reached in the case between Free Radio
Berkeley and the FCC that FRB had the right to broadcast because the
FCC's regulations do not include a provision for low power community
stations. They also forced the FCC to respond to questions about the
constitutionality of their regulations. Freeer radio may be closer
than you think.

ScannerBase frequecny CD (from CSP Technology) has released version
1.06, a free update to current users, at their website today:
http://www.csp-tech.com

This was already a great program, but in response to their users
requests, they have added the ability to export to CSV, DBF, and
UFDBF file formats. Now you can import the results of your
searches into your favorite database, spreadsheet,
and/or wordprocessing program, and best of all.... "Radio Manager for
Windows".
http://www.interplaza.com/bensware

This frequency CD has a GREAT search engine, and with the new ability
to export, is indespensible (IMHO :-}).

The combination of:
ScannerBase
Radio Manager for Windows
PRO-64 or PRO-2041
makes for Happy Scanning!

Tryityoulllikeit!!!

P.S. How to charge your 6 AA ni-cad batteries while in your PRO-64:
Look at the 2 small contacts on the 6 batt pack,
vs the 1 large and 1 small contact on the optional batt pack. If you
take a flashlight and look into the 64, with the batt pack removed,
you will see 3 V shaped silver contacts. You can see that your 6
batt pack will only touch 2 of them when inserted. The middle one is
(+), the one closest to the center of the scanner is (-). The one
closest to the outside of the scanner is what brings the charge in
from the charger to the batt pack. So all you need
is a little piece of metal going from the + contact to the outside
contact. I had a package of tape solder tabs (RS 64-010). They are
very soft metal. I kinda pinched the end of one and pushed it into
the center hole (+) contact of the 6 batt pack, then folded it over
the outside of the batt pack. I put just the tiniest
amout of super glue where the solder tab and the batt pack contact
meet, just to hold it in place. Then slide the batt pack in and plug
into your charger. RS has a 9 V 300 amp charger, but I alrady had
one of their universal 1.5-12 V chargers. Just be SURE to use
negative tip polarity!

5150. Regency HX 1000 Info

Apparently, from what I have read on the newsgroup, they have been busted by the FCC for selling scanners to drug dealers in Latin America. My advice is to not buy anything from them until we get the straight scoop on just what is going on.

Try an antenna amplifier. They come in all shapes and sizes and most scanner dealers have a few different ones. But first ask yourself what it is you want to receive and then purchase an amplifier that is powerful enough to grab those signals. Most good amps have variable power to "customize" your needs.

You can't. Not with the PRO-64, anyway.

> I am waiting to by until I hear from you!!!

Well, put your money away. The only cellular capable scanners are
those made or imported before April, 1994. You'll have to buy a
used one from that era, if cellular trips your trigger.

> much about electronics.

A decent antenna is important, all right, but so long as you have an antenna made for scanners in the first place, there are a couple of other things that are more important and which do not require any knowledge of electronics.

Probably the most important aspect of good reception is the HEIGHT of the antenna. The higher, the better for distant signal origins. Height doesn't make any difference if the signal is hearable in the first place.....which means strictly local reception.

If it's weak or distant signals you want to monitor, then your range can increase by 25%-100% with each 10-ft increase in the height of the antenna.

Next most important is the quality of the coaxial cable or feedline from the antenna to the scanner. It won't make too much difference if the length is 20-ft or less, but any longer, and a LOT of signal can be lost in the cable before it ever gets to the scanner.

RG-58 and RG-59 cable sucks for scanners. Stay away from that stuff, regardless of what the imbecile down at Radio Schloque tells you. Some people will tell you RG-8 is good. It isn't, but it does beat RG-58 and RG-59. For the basic hobbyist, RG-6 satellite cable is hard to beat. It's cheap, but it is low loss.

Some people will try to tell you to get a preamplifier to boost those weak signals. Preamps for scanners are generally a waste of time and money. For a variety of reasons, they don't work right, and often cause more reception problems than they correct. Save your money.

Stick that antenna up higher, and use a good grade of coax feedline.

The two to the right (looking form the front) are for the power. The left most one is for either the antenna or the alert feature on most chargers. The one third form the right is also either for the antenna or the alert feature, in regards to which one the left most is used for. The other two I don't know. The chargers are very simple and you could take one apart and see where each wire goes without worring abotu breaking it.

I have been attempting to purchase parts for an AOR scanner for the past two weeks. NO AOR enterprise company in the United States has the parts.
In fact, the few companies that deal with AOR wanted the scanner for evaluation at $30. I know what is wrong, I needed the parts, NONE are available.

I had to go out of the country, to a company in England. They were very nice and I am working out the financial details at this time.

If you need AOR scanner parts contact Simon at AOR UK Ltd., e-mail address is: info@aor.co.uk

The AOR contact in the US is EDCO in Virginia. They don't have the parts and told me it's hard for them to get parts from AOR.

AOR, Japan wants to sell their equipment in the United States but doesn't want to support said equipment by making parts available. The hell with AOR, I will NEVER purchase another AOR product.

AOR's presence in the US has always been shaky at best, having gone through 2 different distributors since the start, and selling scanners that are actually manufactured by different companies. Some of their models really qualify as "junk" while some recent rigs are well designed, well built, and very solid.

I don't find dealing with offshore dealers so bad, especially since there some out there (like Javiation UK) that are extremely accommodating.

I own an AR7030 shortwave receiver which I am very pleased with. I bought it from Javiation, and have received excellent support from Jonathan as well as Richard at AOR UK who has sent me parts for quick fixes on a moment's notice.

First: buy the friggin' scanner first.

Second: read the info given

Third: do as the scanner info manual says and based on
what you program into the first bank will give
you your raw data to work with ....

Fourth: then press scan and the control code will be
found and then your scanner will be ready to
boogie based on where you are at....

Fifth: make sure your area supports Motorola radio
and not GE units: whoever you want to listen
to....

Your question is redundant. You have to pay the
price of the ticket in order to take the
ride on the train to "coded" nirvana....

...it's out there, really. Just pay the price
and then allow your fingers to do the walking as
you discover the fun of trunk-tracking.....

All you gotta do is mail the bad antennae back to
them...the repair dept. with a copy of your
purchase receipt number and having sent in the
registration card and within 3 weeks you will
be sent the better made unit....

or you can Call Grove Enterprises on their
800 number and order Bob's special on
these antennae: he recommends the condor.

I sent two antennae in and received two in
roughly 22 days....not bad.

Hello. I have a Cobra Trapshooter 3 Radar Detector for sale. It's looks are 9+/10 and it has only been used slightly. If you interested let me know. Here's all of the information that you'll need on it:

FEATURES: mute feature, dim feature, city feature, built in speaker, volume control, signal strenth, alerts you with lights and sirens, detects K, Ka, and X band radar

ACCESSORIES INCLUDED: cigarrette lighter power cord, owners manual, and windshield mounting bracket

>a biologist but it makes sense to me.

Unfortunately for that theory, it isn't true. There are no resonances of H2, H+, OH-, or H2O near 2.45 GHz. It is just plain old dielectric heating at work here. (The first absorption line for water molecules occurs near 22 GHz.)

Microwave ovens heat any material which has a molecular structure which has a dipolar moment. Many biological molecules do, including all fats. Water also has a slight dipolar moment because of the angle of the hydrogen bonds with the oxygen atom (this is what gives rise to van der Waals forces in water). A dipolar molecule has a net charge separation across the molecule. These two poles can be *torqued* by an electric field. If the field is time varying, IE AC (RF), then the molecules torque back and forth in place. This vibration is sensible *heat*.

Where resonance comes into play is *external* to the material being heated. For maximum efficiency, the varying potential needs to be *large*. That is supplied by the resonant cavity which has resonance nodes which maximize the potential expressed across the food inserted into the cavity, and thus maximize the torque delivered to the dipolar molecules of the material to be heated. (That's why microwave ovens have *hot spots*, which are points equidistant between opposite polarity standing nodes in the cavity. And that's why microwave ovens either have turntables to rotate the food, or a mode stirring device, looks like a slow turning fan, to vary the resonance pattern in the cavity to reduce hot spotting.)

Note also that microwave ovens do not heat from the inside out. They heat to the skin depth of the material being heated. That's a function of material conductance and the frequency used. For deeper heating, lower frequencies are preferred. Large institutional microwave ovens used 915 MHz to allow cooking of thicker food sections, IE whole hams, or whole roasts. The trick of using aluminum foil to reduce heating of thin sections, IE the extremities of fowl, is an application of skin effect.

(Aluminum foil has a very shallow skin depth compared to foods.)

There are industrial dielectric heaters which use even lower frequencies. Plywood is cured using frequencies in the 27 MHz ISM band. That works out nicely since plywood is typically supplied in 8 foot lengths, so the heating cavity works out to be a nice fit. (Before CBers get too excited, these are power oscillators, not amplifiers, so forget about adapting them to CB.)

From: Paul Bobby <$pbobby$@stny.lrun.com>
Message-ID: <347DC7BF.83874505@stny.lrun.com>
Source record: 179240

I've been scanning with my bc200xlt for a while, and wanted to ramp up a bit and look for something new. I have researched the area on equipment for a good handheld/pc interface/software combination. I'll need the portability of a handheld, but would like to control it with the computer (so many memories!). I'd also like to dump the audio to my hard drive or a tape recorder.

I have read much information, and sent a few emails to people, and I'm getting conflicting comments! (I'm not too surprised) but the comments are like "the ar8000 would be a great choice","the ar8000 would be a lousy choice" !

What should I do?

> 173.075 stolen vehicle recovery (LoJack)
> 154.665 .680 .695 } State Police
> 154.905 .920 .935 } coordinated
> 155.445 .460 .490 } operations

Actually, 155.490 is NOT a state assigned channel, but 155.505 is. When the channels were divided in the 1960's from 60 KHz to 15 KHz spacing, 155.475 was just a State channel. In the early 1970's it was chosen as the new Nationwide Emergency Channel, and 155.505 was reassigned to State Police Agencies to replace it.

In IL, 154.680 was the ISPERN statewide channel until 1973 when it was replaced by 155.475 to confom with the new nationwide allocations, and since neighboring states had planned on using 154.680 for routine ops. 154.680 reverted to routine District operations after this in IL.

Also in IL there are a couple Statewide channels:

155.025 ESMARN (Emergency Services Mutual Aid Radio Network) for ESDA/EMA units (Also used by IN statewide for ESDA/EMA)

155.055 IREACH (IL Radio Emergency Answering Channel) for 9-1-1 dispatch centers to relay calls to other agencies, and to provide inter agency and interdiscipline operability at scenes.

WI has 151.280 (Called MARC, Mutual Aid Radio Channel) for much the same purpose.

>
> Fire [90.21]

> 45.88 intersystem, primarily base-mobile
> 154.265 .280 .295 mutual aid

Although not Mutual Aid per se, 153.830 is reserved for Fireground use, and
can be found in many fire department radios.

they usually dispatch off of TAC-1 (154.830) and when there is more than one up, they also attempt to communicate with each other on this frequency. You may only here one side of the conversation though, because in the air they are line of sight with each other, and you are on the ground, in line of sight with only one of them. When they arrive at an incident, they usually go to simplex of the local frequency. That is why sometimes you will here the ground units and not the air units, or vice versa.

Also try 123.025 and 123.050 during a big event, they will be talking with the media helicopters.

BTW: Heard a North Hollywood LAPD supervisor 15L90 pop directly onto the Burbank Dispatch frequency yesterday. Perhaps LAPD is finally utilizing those expensive portables correctly.

Funny, I probably make a LOT more money than you, & my job
required REAL credentials & a college degree. YOU seem to be the
one who knows all about bedpans. I heard you make a living
washing used bedpans, it must be true.

Actually Glenn, it really is funny what you say about being picked
on & being a bully. After YOUR request, I was in YOUR home town of
Tacoma & looked for you on the repeater you said you would be on.
You were NO WHERE to be found for THREE days. Instead, after I left
you got on the internet & made up some story that I was
swearing on YOUR repeater. (Actually, it isn't even YOUR repeater, you
simply use it)

You have proven yourself to be both a coward and a liar.

> Oh yea, John-BOY rarely says anything truthful or
> factual. He lives in his own fantasy world as his posts show.

OK, present something FACTUAL (I am using a word YOU chose) which
proves I was NOT truthful with something I said. You mention
that my posts show this, so it should be easy for you.

> As to John-BOY and Bill Cheek, Cheek was (is?) a moderator on the Fido
> Scanning Area. John-BOY behaved the way he does here on Fido and they
> booted him off. He blames it all on Chek but his own BBS SYSOP agreed and
> pulled the plug.

No. Actually my BBS sysop was quite frustrated at Mr. Cheek, but did
the
action to keep peace. If he had not, then the feed for that echo to
ALL users would have been cut. With the dictator type of powers
that an echo moderator has on Fidonet, that is possible.

Another interesting fact is that in my two years on fidonet, I have
NEVER been kicked off of another echo.

(facts hurt, huh Glenn!)

> You will notice John-BOY never posts his Sprint E-mail address, where he
> generates his 200 worthless posts a month. If he made it public, Sprint
> would be shut down by the flood of complaints and he would lose his
> access.

NO. Wrong again Glenn. I have NEVER used my Sprint e-mail address
for anything. I use my USA.NET address so that regardless
of the service provider I am using (Sprint, MCI, or other)
I still have ONE e-mail address & am EASY for others
to locate. (Besided even a FOOL like YOU can read the
headers & see what ISP I am using)

YOU on the otherhand, change ISP's & addresses about 3 times a years.

YOU certainly are the pot calling the Kettle black as YOU use
addresses on USA.NET (like me) & Juno.com, yet you
get your ISP service from IBM.NET.

> John-BOY even has to use a PO BOX number for his ham license
> because so many Hams hate him he has to hide.

Wrong again (I don't think you have made a correct statement yet!)
EVERYONE who knows me know how to find me. I use a PO Box
so that no matter where I am living I have the same mail address.
In 10 years I have moved a few times but NEVER had to change
my mailing address. That is called RELIABILITY & CONSISTANTANCY,
somethings I am sure you know NOTHING about.

5199. AOR 8000 Repair By Mail??

Newsgroup: rec.radio.scanner
Date: 1997-11-27 00:00:00 UTC
From: chip30@aol.com
Message-ID: <19971127234201.SAA25602@ladder01.news.aol.com>
Source record: 179252

Help, Please !! My AOR 8000 has problems:
1) The BNC antenna connector on top of the radio is loose and wiggles.
2) 2 of the springs that hold the batteries in the battery compartment
have become detached from the compartment. As a result of this,
they do not make their connection to inside the radio.

Anyone have advice on a mail-order repair (maybe Grove?) service and
their reliability...
Thanks much in advance for any help !!

5200. DCD for the R7000?

Newsgroup: rec.radio.scanner
Date: 1997-11-27 00:00:00 UTC
From: Rob Kling <rkling@umich.edu>
Message-ID: <347E082F.1996@umich.edu>
Source record: 179253

I have a question that may seem trivial to the most users but I want to know. How does the R7000, operating
from computer control, stop automatically when scanning? I am writing software to control my radios. My
interface is an Opto 535 and I can control my PRO2035 with NO problem. I would like to know how other software
programs work? If I have to use the internal scan feature of the R7000 I will, but it is rather slow. I could
connect the DCD of the com port to the DCD of the radio but then I would have to check which radio is setting
it! Any help any one can give me will be greatly appreciated.

Oh damn, I guess that means I'm going to have to sell my BC800XLT and my (modified)PRO-2030 . . . can't be caught violating the ECPA, right? Ah, maybe I ought to think twice about snipping the diode in my PRO-2006, also!
Gee, the triple conversion scheme of the PRO-2042 totally eliminates that nasty cell phone imaging problem, doesn't it?

There's no aircraft traffic between 216 MHz and 225 MHz! 216-222 MHz is allocated to various land and non-land mobile services, and 222-225 Mhz is an amateur band. Additionally, these two bands utilize FM as a transmission mode. 225-400 MHz is the military aircraft band; the civilian aero band is 118-137 Mhz. Both bands utilize AM as a transmission mode, with the exception of a few wideband FM transmissions in the 225-400 MHz range.

Compared to the number of models on the market today, there
are very few which are handhelds and have computer control.
It basically comes down to the Alinco DJ-X10, AOR AR8000,
and iCOM IC-R10.

Of these, the AR8000 is the most popular. It probably has
the largest number of software packages available for it.
And of course it's also the most expensive. But if that's
what you want, that's the price you'll have to pay.

> production. Any help would be appreciated.

Depends on the price, frequency coverage and partciular
features you might be interested in. Today's hottest models
would probably be the BC9000XLT, PRO-2042 and BC895XLT. One
of the best used models would be the PRO-2005/2006.

The BC895XLT is Uniden's newest and is loaded with great
features and has wonderful performance. Radio Shack currently
has a sale on their top-of-the-line PRO-2042 for $300.

You can find some more info on these radios at my web site
listed below. Just point and click to find your way around.
If I can help answer any other questions, feel free to
e-mail me.

Good luck!

Hey,

I've nothing against pirate broadcasting, but I sure as hell wouldn't go around admitting it.

Part of getting away with it is not shooting your mouth off and calling attention to yourself. And if you're looking for parts/supplies on the Internet (or anywhere else, for that matter), don't say what you want them for.

Don't ask how I know all this.

Peace,
Charlie

Yep, an ol' 2011 base. Average coverage plus 380-512. 20 channel memory, lockout, delay, Motorola antenna jack on back. Comes with top-screw telescopic antenna. Works fine. Make an offer I can't refuse and it's yours.

Hi there,

I have a Ranger Communications RCI-6030 VHF-Marine rig which I want to trade for a scanner. The RCI-6030 has the following features: All USA and International channels (156-162 MHz), all 10 NOAA weather channels, 25 watts output power (full legal power), 1 watt low power, Dual Channel Watch, Instant Channel 16, Digital PLL tuning, backlit LCD display, "water tight" casing, and more. Comes with the microphone (with channel control on mic). Very good condition. This is a current production unit, not discontinued. I am looking for a portable or base/mobile scanner (preferably portable) which covers 800 MHz (not nessesarly gapless 800 MHz), and preferably also the VHF Air Band (118-136 MHz). Any number of channels will do. Anything in good condition will also do. Please email me if you have any offer. I am in the Philadelphia, PA area. Thanks.

73's,
N3ZVM <--------Ham Radio Callsign

We got to PROTECT OUR RIGHTS TO LISTEN TO CELL PHONE CALLS!.
These rights were handed down to us by our forefathers, and religious leaders before that.

HR2359 also refers to a chapter in the old testament. *NOT A COINCIDENCE*.
It speaks of a future time where three kings will take up arms for a war that has been fabricated. This refers to a time of upheaval where the "mother shall not be allowed voice with her sons" - The state of America to come?

Locusts with the sound of a thousand horses shall "rob them of their speech" --- Helicopters coming to raid the resistant. There are many more such references, but I have not figured any more out yet.

Long distance rates will go up, and there will be earthquakes. I have a couple others too

Beware - we must PROTECT OUR RIGHTS TO LISTEN TO CELL PHONE CALLS!.

:I was serious about the relationship between PCS and microwave ovens.
:I wouldn't think it would be safe to use PCS for a long time although
:the PCS's power is very low.

It is not safe to use cellular phones for a long period of time due
to the proximity of the antenna to the brain. That means that Christians
are safe.

Barry

I've heard them on 155.475 doing drug busts in the downtown area. the
state police is also doing drug surveillance using an airplane during
daylight hours on 151.490. They are looking at the 2nd and 3rd street
area and one day followed a car thru bethlehem near Lehigh U.
both freqs. are car to car low power so use a good outside antenna.
A friend of mine told me that the Whitehall police use cellular phones
all the time and talk like no-ones listening.

Run a cable from the "line" jack on the front of the scanner to the "mic" or "microphone" jack on your recorder. Run a cable from the "aux" jack on the rear panel to the "rem" or "remote" jack on your tape recorder. Set the scanner to "manual." Step through the channels one by one, and on each channel you wish to record push the "aux" key on the upper left hand side of the front of the scanner. You'll see the word "RECORD" replace the "BANK X" indication. Start the radio scanning. Press the "RECORD" and "PLAY" buttons on your recorder. Now, each time the scanner stops on a channel that you have programmed with the "aux" button to "record" the tape deck will automatically start to record, and it will stop when the transmission stops and the radio resumes scanning.

Its a nice little program that enables a scanner to be connected to
your soundcard of your pc and decodes pager transmissions so the msg
being sent to the pager appears on your monitor.

Regards,
tony.

5241. WiNRADiO Tips: the AutoStepper

Newsgroup: rec.radio.scanner
Date: 1997-11-27 00:00:00 UTC
From: bcheek@san.rr.com
Message-ID: <347d3594.35838399@news3.cts.com>
Source record: 179351
Cross-posted to: rec.radio.scanner,alt.radio.scanner

WiNRADiO Auto-Stepping

Auto-stepping provides a significant enhancement
over fixed stepping. When configured, auto-stepping
will automatically set the frequency step size
according to the band being received. Auto-stepping
can also set the mode in addition to the step size as well.

Auto-Stepping is to WiNRADiO as the default fixed steps
are to most scanners, typically 5, 12.5, 50 (and 30) kHz
in the case of the PRO-2004/5/6 and PRO-2035/2042.

Except that in WiNRADiO, the Auto-Stepper is fully
configurable by the user for whatever desired default steps
anywhere from 100 Hz to 1 MHz

To configure auto-stepping, see further below.

For example, you have configured two auto-step ranges,
one in the AM broadcast section set from 530 kHz to 1620 kHz
with a step size of 10 kHz. You also set the AM mode when
in this frequency range. The other range you configured is
for the FM broadcast section, set from 88 MHz to 108 MHz
with a 200 kHz step size, setting the FM-W mode.

If you are currently tuned to 144 MHz (an amateur band)
in FM-N, the step size will remain the same as set for
fixed stepping. If you now type in 1500k, you will see
the step size will automatically change to 10 kHz, and the
mode will be set to AM. If you step outside the range, the
step size will be set for the new range you entered. If no
range is specified for the new frequency, WiNRADiO will default
to the fixed step size.

You can also configure auto-stepping to skip frequency ranges
that are not specified. If, using the setup above, you stepped
above 1600 kHz in the AM broadcast section, WiNRADiO will
automatically step up to 88 MHz setting FM-W and a 100 kHz step size.

Note: If you are at the lowest or highest range specified,
and tuned to the lowest or highest frequency in that range
respectively, you cannot step lower or higher if you have the
skip specified ranges option set. If you manually type a
frequency in a non-specified range, WiNRADiO will try to step
to a specified range. If no range is specified in the direction
you are stepping, the frequency will not change.

Auto-Stepping configuration

An auto-stepping configuration dialog box allows you to
set up and configure the auto-stepping mode. You can
configure the step size for many ranges of frequencies,
including the default mode to set the receiver in. To configure
Auto-Stepping, click CONFIGURE > Auto-stepping on the menu bar.
Configuring the Audo-Stepper creates and/or modifies a file in
the \WINRADIO directory called AUTOSTEP.WRF, a binary file
that can't be easily edited. (See below)

Difficulties associated with Auto-Stepping

The WiNRADiO RF spectrum vast: 500 kHz - 1.3 GHz This
spectrum covers many bands, each with different "steps" or
increments between assigned frequencies. It could take a long
time to fully hand type your WiNRADiO Auto-Stepper configuration,
but I can help.

At the end of this post is a"database" of the allocations for
the USA, in comma-delimited format, suitable for importing into
a database manager or spreadsheet. It also makes a good model
for the Auto-Stepper file for WiNRADiO. You can use the WiNRADiO
Auto-stepping CONFIGURATION utility and hand type the steps as
seen below....at least this will give you a guide. But if you'd
prefer to have my edited and tested AUTOSTEP.WRF file, all
ready to go, then you can download it at no charge from my
FTP site as follows:

ftp://204.210.11.126/pub/winradio/autostep.wrf

First back up your original AUTOSTEP.WRF by changing its name to
*.OLD or something. Then place the new file in the \WINRADIO
directory. You'll have to shut WiNRADiO down and then fire it
back up to make the new file operable. Then click CONFIGURE
from the menu bar and choose Auto-stepping to see the new file.
You can edit it as you please, of course.

See below my signature box for the text version of this file,
as described above.

Microwave ovens run 600 - 1500 watts, where a PCS phone is always
going to be well under 1 watt.

I intended to say "received signal levels will increase by 25%-100%" with each 10-ft of height increase.....typically 1 to 3 dB change of apparent gain for a 10-ft height adjustment.

Somehow I said "range" which isn't quite true, although it isn't hard and fast as you insinuated, thanks to diffraction of radio waves over distance. Optical line of sight is one thing; radio line of sight is quite different over the VHF-UHF spectrum. Weather and other factors constantly change the "K" factor over a radio path, but as a "rule of thumb", a VHF-UHF radio wave sees a 4/3 earth radius.....consequently an even greater range with a moderate increase of antenna height.

> >Next most important is the quality of the coaxial cable or feedline

> IT very much depends on the frequency and the coax you use. Some
> RG58/59 is better than others,

Not if it carries the RG-58 or 59 designation. There is very little variation in the loss characteristics of these two cables at UHF. The best of the best still sucks. The best of the best has good high voltage characteristics and good shielding. The loss per foot is still unacceptable for VHF-UHF unless the total length is less than 20-25 ft, in which case there are cost/benefit issues to consider.

> Translation, buy a brand name cable, and buy it from someone who sells
> a lot of it. A coaxial cable that has been on the reel for 5 years

Wouldn't you much rather have 5-yr old RG-6 than 1-day old RG-58?

> If you can afford, use Heliax or some other semi-rigid cable. In
> general the larger the cable diameter, the lower the loss.

Obviously. But the casual armchair hobbyist isn't about to plunk
down $2 or more a foot for LDF2-50A and $50 a pop for the two connectors.
RG-6 remains the best choice when a "rule of thumb" is called for.

By the time a hobbyist knows what Belden 9913 is or the above mentioned
LDF2-50A, he won't be reading articles like this one, or if he does, he
won't be confused by the rules of thumb.

> >Some people will try to tell you to get a preamplifier to boost

> The problem with any pre-amp is that boosts noise, and adds its own
> noise as well.

And hobby preamps do absolutely nothing for the 1-dB compression point.
In fact, they decrease the dynamic range of the receiver....probably
not very good in the first place, and only made worse by the preamp.

> Good pre-amps belong at the base of the antenna, not in
> front of the scanner and the usefulness is pretty much limited to
> undoing the losses in the cable.

Again, we're talking scanners and scanning here....i.e., monitoring over
the range of 25 MHz to 1300 MHz. There is no such thing as a "good preamp"
for this range that can be mounted at the antenna; controlled from down
in the shack; and not do more harm than good. The animal doesn't exist.

> expensive.

Contrary to what you say....RG-8, RG-213, et al, while they are industrial workhorses, definitely have poorer shielding; greater capacitive loading, and depending on the chart, equal or nearly equal loss as the so-called "inferior" RG-6 satellite cable..... and you forgot one teeny weeny little issue.....

You see....by the time the hobbyist slaps on a pair of PL-259's and screws in a pair of BNC adapters, and kinks the shit out of the feed to the back of his scanner, his total system loss on RG-8 cables will be significantly greater than an RG-6 setup with comparable attention (orlack thereof) to detail.

In the hands of someone who knows what he is doing, RG-214 and comparable cables *might* prove somewhat better than an RG-6 system. There will not be a night and day difference, however.

Like I implied to Mr. Weber....."rules of thumb" carry a lot of "lumped constants". For the entry level and intermediate hobbyist, rules of thumb are superior to detailed analyses by virtue of the fact we'd lose the poor sap on the first division by zero..... Once they progress to yours and Mr. Weber's stature, they're on their own anyway.....

Yes, preamps ARE misleading. They don't work. Period. Not for scanners.
Not unless designed and tuned for a specific frequency, and even then, they
better be of the GaAsFET type so as to not increase the overall Noise Figure
of the front end.

> If you don't believe me, try this simple experiment. Go find

> that Radio Shack sells, so I can't comment on how well they
> work.

THAT very thing is misleading. You're talking basically a "clean room" with
a pure, solitary signal at the input. I know what you're talking about.
I've built scope and freq counter preamps using plain old bipolar devices
and sure as tootin, they'll bring a 0.25-uV signal generator signal up to
full quieting.

You failed to consider that those kinds of signal generators do not
appreciably add any noise to the signal.

> Preamplifiers are especially useful when you want to listen to
> UHF frequencies (especially at 800MHz and above). However, you
> must use them properly.

How the hell is the entry level and intermediate hobbyist going to "properly
use" a narrow band preamp? Especially mounted properly? The requisite
bypass alone will add to the loss factor for when the preamp is worthless.

Where do you find a "useful" preamp, good for 25-1300 MHz?

>> Stick that antenna up higher, and use a good grade of coax feedline.

> Your mileage may vary.

If it does, it will vary LESS than when a rank amateur dorks around with
RG-8, PL-259's, BNC adapters, and narrow band preamps, or preamps that
worsen the receiver's Noise Figure.

5246. Re: Regency HX 1000 Info

Newsgroup: rec.radio.scanner
Date: 1997-11-27 00:00:00 UTC
From: grohe@galaxy.nsc.com
Message-ID: <34804aa5.5947680@139.187.81.1>
Source record: 179356

On Wed, 26 Nov 1997 02:00:55 GMT,
in the newsgroup rec.radio.scanner,
2006_1111@ridgecrest.ca.us (GW)
from RidgeNET thoughtfully posted:

> Can anyone help me with basic programming of the HX 1000 and any info
> such as when this unit was made, etc. I have no documentation with
> this unit and know nothing about it. Any help would be appreciated.
> Thanks,

I believe they showed up around 1984-85. I have two of the 1000's
"bigger" brothers, the HX1200 and HX1500.

I went in to buy a '1000 when they were available, but the store
I went to was sold out. However, they were nice enough to sell me
a new HX1200 for the same price! That was in late 1985, and I
still have it.

The HX1000 receives the basic VHF-low/hi and UHF bands. No
Aircraft or 800MHz.

It follows the Regency programming standard.

To Enter a frequency:

<manual> <X> <X> <X> <.> <X> <X> <X> <enter> <X> <X>

To enter 162.55MHz in ch 5, press

<manual> 1 6 2 . 5 5 <enter> 0 5

Channels below 10 must be preceded with a zero.

To go directly to a channel:

<Manual> <x> <x> <Manual>

(the HX1000 may not support direct entry - I can't remember)

Or step through the channels with the <Manual> key.

Lockout:

To lock/unlock-out a channel, IT MUST BE SCANNING! Enter in the
channel number to lock out (it toggles).

To lock/unlock channel 20 press:

<scan> 2 0

To lock/unlock channel 1 press:

<scan> 0 1

Search:

To search a range of frequencies, enter:

<manual> <search prog>

1 6 2 . 4 <enter> <lower> (the "1" key)

1 6 2 . 6 <enter> <upper> (the "2" key)

<search scan>

Press <search scan> to continue scanning if a undesired signal is received.

Use the HLD/DLY switch to select whether the search stops and "parks" on a frequency ("HLD"), or continues searching 1 second after the transmission ends ("DLY").

General info:

If you goof-up while entering a frequency, press <.> to back out.

You can change the scan speed by pressing the "SP/Enter" key.

"Priority" channel is channel 1.

The "push-to-talk" button on the left side is the display light.

Be aware of the keyboard "lock" switch, located on the left side, on top of the push-to-talk switch. This switch can easily be knocked into the "lock" position by sliding the unit in a holster, case, or in a pocket. If your keyboard becomes inoperable, check the switch.

The two-pronged "tuning-fork" style center-conductor on the "stock" BNC antenna connector tends to spread apart after repeated use. *Carefully* bend both prongs back towards the center. Or, better yet, replace the whole connector with a good quality Amphenol, Kings or Pomona BNC connector (it's a standard panel-mount BNC female bulkhead). Eventually, those pins will break.

The supplied adapter is a 12VDC, 200mA, center-negative wall-wart. Charge time is 16 hours. Battery packs are the same as the HX1200 and older Regency "Polaris" marine HT's.

Note that the power jack/charge terminals are connected *directly* to the battery. Any DC power supplied to the radio MUST be current limited to 200mA or less. Do not connect it directly to a cigarette lighter!!! Careful not to short out the bottom charging terminals! Also, because of the way the battery

is hooked-up, the radio will not operate from the adapter with a dead/shorted battery (until it charges up).

IF Frequencies:

First: 21.4MHz
Second: 455KHz

Tips:

To easily review or lockout/enable numerous channels, open the squelch and press "scan". Press "scan" to step through the un-locked out channels and directly punch in the channel number you want to enable/disable.

As the batteries wear down, the audio gets a "ring" to it, then the UHF band starts to go (displaying "FrErr"), followed by intermittent or choppy squelch, then death.

Not very "gee-whiz" by todays standards, but very sturdy and reliable. Excellent sensitivity.

Cheers,

While what you say may be true, the description of the raid is
consistent with both IRS and Customs Service raids. This tends to lead
credence to the possiblity that it did involve export controls.

From the dealings I have had with US Customs, you can be reasonably
sure that they had very good reason for the raid. It is usually the
end result of a very long investigation, and may in fact be tied to
violations that occured long ago.

Hi there!

Just a reminder that I can supply any spec. crystals that may be required at a great price!

There is, however, a minimum run of 100 pieces required, but as I export all over the world on this basis, it seems that this 'limitation' is not too restrictive!

Any special needs, just ask!

>

What memory are you operating with:

EMS
or Higher MEM area

I think EMS will conflict...reinstall
your win 95 and don't choose EMS...

do you have a memory manager:

I use the Qualititas 8....it's for win95....

I don't have that problem any more...
after you allow the Max to reconfigure your
files and your config.sys and autoexec...

the clearing will take place

There appears to be a mem conflict between
high mem and ultra high mem...UHM....

Qualititas Max does this moving upwards all by itself

mine is up to 900 MEGS"s in high mem....

There is another mem manager by Quemm...

Does not win 95 have it's own mem manager...? IT's
in the files on the CD....that is a good one too....

check out your menu on the win95 disk.

Then install it and let it maximize your disk....

SuperPro is the one that gets bundled with it....

good luck

bill

My wife had a Regency HX1000 years ago and I wish we would have
kept it.

If I recall, the HX1000 had this neat type of digital clock,
viewable by pressing what looked like a PTT pushbutton.
The clock could act as a timer, running only as long
as the scanner was powered on.

We set it to 00:00 after each battery recharge. That way,
we used the clock as an elapsed timer so we could see
how long it was since the last recharge.

The HX1000 was manufactured by Azden.

I was always on the understanding that 2.45GHz is the resonant frequency
of hydrogen atoms - hence the rapid heating of microwaved food. I'm not
a biologist but it makes sense to me.

Golly John-BOY, this is your typical response when somebody corners you isn't it. You have pulled this a number of times. You know as well as I do that this is a forge. Only a scum sucking low life would pull something like this. OH!! That's John-BOY!

You forgot to include all of what I replied to John-BOY. You maybe a pathological liar but at least you don't try to defend the obvious. Here, I'll repost it. Really hits home, eh loser?

"Hell John-BOY, I could repost over 400 posts in the last 3 months telling you to shut up and die. If I went back 2 years the number would be closer to 4000. You are more hated than Burt Fisher. "

> > You are more hated than Burt Fisher.
>
> Sorry, YOU get that recognition.

Yea, right dip stick! You are asked, begged and pleaded with to leave this NG. I could EASILY repost 50 posts from the last couple of weeks stating what a piece of crap you are by many different people. Can you do the same or great liar? Nope!

-> >
-> > They actually use the freqs for Univ of Calif San Diego Med Center.
-> >
-> > Why is this ????

It would be EASIER to reply if you put your reply AFTER the quoted material, but...

Heartland recently 'swapped' freqs with the nsoon-to-be-operational San Diego County radio system, so that testing could be done on the old Heartland freqs without interferring with operations.

Unfortunately, the County radio techs (AND Motorola radio goons) apparently didn't GET that message, and continue to test on the NEW Heartland freqs. Most of the time, there are now * 4 * data channels on the 7 channel trunked system. Not good if you are assigned a freq that happens to also have a 'rogue' data channel on it. The Heartland Firefighters, especially the Battalion Chiefs, are furious about the poor comms they have now.

Hi Matt,

I am not sure about what codes Ocean City uses but the Sheriff and the
rest of the Atlantic County municipalities (except Atlantic City) use
the standard Atlantic County codes. You can find them on my South
Jersey Scanner Page at http://www.erols.com/jcardani/sjscan.htm

Click on Atlantic County then Atlantic County Law Enforcement. the
10-codes are near the end.

Joe

Source record: 179179

i have the pro2041 base scanner and like it a lot. it has 400 channels, 17 bands. the only bad thing about it is that it doesn't have the whole military air band, only a part of it. and it also has all the 800mhz cellular freqs blocked out, it was just on sale for 200 dollars, but i think the sale is up which would make it 300 dollars.

5279. Newington, CT freq's.?

Source record: 179181

I popped by my local (B.C., Canada) Radio Shack and noticed the PRO-26 I have had my eye on for quite some time is on sale again, but this time as a discontinued product. (This would be my first scanner)

The price is right and I'm thinking of snapping this one up before it's gone forever from retail, if that's truly what's happening. I was just wondering what it is being replaced with. Is there a new model with as comprehensive coverage to replace it with maybe more memory or new features that I might regret not having?

I expect any new model would be priced higher and not go on sale any time soon.

If anyone can give me the scoop on this I'd be very thankful.

Bryan

p.s. an email copy of your post would be appreciated as time may be of the essence. don't want to go to buy it and find that last one had just been sold.

Correct, but there is also a lot of military aircraft traffic in the 137-144MHz
military land mobile range. Land units use NFM, while the aircraft use AM. Most
of the aircraft comms found in this range are air to air and tactical.

>Thanks, Bill

Police Call by a long shot. Betty Bearcat attempts (poorly, IMNSHO) to
cover the entire country in TWO volumes. Police Call uses NINE volumes and
is far more accurate and complete.

>And of course it's also the most expensive.

Well, here's more conflicting advice! Of the three, the AOR is actually the least expensive if you you look at prices from Bandercom, Javiation, Neveade and a few others (by about $100, with very little shopping around).

You also omitted mention of the Radio Shack Pro-64, which is the least expensive of all of them.

Message-ID: <65naut$bj0@bgtnsc03.worldnet.att.net>
Source record: 179197

I'm planning to replace my late PRO-2004 (Tandy could've fixed it for $200 -- no thanks). I'm looking at the Uniden BC895XLT (or possibly the 295, although I think I'd rather have desktop than handheld).

Can anyone tell me about the search features? I'm looking for info on how it finds new freqs. The PRO-2004 allowed 10 different prograammable freq ranges I could search. Are the TrunkTracker scanners similar, or do they have preprogrammed ranges, or only one programmable range, or a combination, or what? Thanks in advance.

Andy Ulrich

5297. Re: Pro-2004 repairs?

FYI, if you DO send it to Tandy, it'll cost $49 for labor, plus anything for parts, if they replace anything. Sounded reasonable for mine, but it was broken and it would have cost $150 in parts, so $200 was a little high, so it's back and still broken.

I was given a Uniden/Bearcat Model BC147XLT scanner with no manual. Could someone send me a copy(I'll pay for the service), or advise where I can get one. I already do a bit of shortwave listening and would like to get into some local scanning. I'm in Alabama near Montgomery & Maxwell AFB.
If you could, please answer some questions in the meantime if you a previous owner of familiar with the model:
1. How do I set the frequencies in this thing?
2. Do I need to purchase any crystals?
3. Does it have an internal antenna I can use in the meantime?

Thanks,

Koch(Xmedicusaf@aol.com)

John-
You never did answer his allegations. You know - about alleged sicko activities in "Beeverton or close by"...

How did he find out about it? Were the Police involved?
Did you do any "real time", because of it?

I sympathize with you on this, man. I think J.T. was a real ratbutt for cluing everybody in on this. I think when anybody does his time, everyone else should just let it be. Even if someone did something as sick as the allegations seem to indicate.

But will there be any changes to the frequencies. I have a set of fire and police setup including Toronto, Brampton, North York, Scarborough and Mississuaga, as I live kind of in the middle of these areas. I haven't really noticed an increase or decrease on the separate city service frequencies activity. Has there been any changes? By the way I have used your page in the past, it is a great reference.

That may be so if you go the import approach. US prices I
have seen for the AR8000 range from $550 to $600. The R10
from $500 - $550. The Alinco still has not been FCC certified
so you'll have to wait to buy from US dealers or go the
import route. My understanding was the Alinco was $450-$500.
From this approach, it seems to me the AR8000 is the most
expensive.

> You also omitted mention of the Radio Shack Pro-64, which is the least
> expensive of all of them.

I did not mention the 64 because it does not have computer
control in the strict sense that the AR8000, X10 and R10 do.
You can only download data to it. No upload, no bandplan
editing, no scanning, no searching etc. The 64 provides
only the most minimal of function which is not what I
thought this gentleman was interested in since he had
mentioned the full featured exotic imports in his original
append. I would say it has computer interface abilities but
not computer control.

Actually, it was a Democrat, Edward Markey of Mass., who first introduced HR1964 which included many of the provisions of the original HR2369. Then along comes Republican Tauzin who picks up Markey's wording, and adds to it, making it more restrictive. Now you have to stir the pot a little more and add both Dems and Repubs signing on as co-sponsors. This is clearly not a partisan issue.

I couldn't agree more... This is the best way for a hobbyist to increase his range... Problably the most bang for the buck to... I have a 30 dollar rat shack antenna on a 50 foot tower with nearly 200 feet of tri-shield RG-6 to the back of my scanner and almost pick up so many different stations on the same frequency that they interfere with each other.

5320. What is the scanner to buy?

When I bought my first scanner it was because modifiable scanners would soon be illegal. I bought a Pro-43 and have loved it.

Now I am in the market for a desktop scanner, I always planned on getting a used pro-2006, but to be honest with all the new laws and features I would I am not sure I may be missing out on some good features of the newer scanners.

So what's out there, is there any thing similar to the 2006 with more advanced features? The ability to be modified and work with a lap top is a big plus.

Also can you still buy those adapters that fit inbetween the antena and the scanner and allow you to get the full 800mhz band? So much has changed I am not sure what is legal and what is not.

I barley ever listen to the 800mhz bands, but I hate being tole I can't: :-)

For shame.... You should have gone to a reputable hobby store with
your old/dead pack. They could have made one for you at probably half
the cost and provided you with higher capacity cells to boot. No
soldering (for you) required, they would have done it all.

I've seen numerous posts regarding this same problem with the Uniden BC235XLT, including one of my own. From what I hear, if the unit is still under warranty, Uniden will replace it free of charge. That is of course you want to replace a crappy OEM antenna with antoher crappy OEM antenna.

5335. Looking for plans for a De-Scrambler and Cordless phone FREQS

Newsgroup: rec.radio.scanner
Date: 1997-11-28 00:00:00 UTC
From: Pascal Lemay <p_lemay@videotron.ca>
Message-ID: <347E67B5.464892A0@videotron.ca>
Source record: 179293

Hi! i'm looking for plans to build a voice DE-scrambler to unscramble my

local police and also looking for frequencies of the cordless phones for

the PANASONIC, the one with 25 Channels, model #kx-Tc180C-W if you can
help i really appreciate.
Thanks!

Everyone always leaves out car to car - 154.950
The 155.370 (aka intercity) is used for base to base comms and the mobiles xmit on 154.950 / rx on 155.370 to talk to dispatchers and the mobiles use 154.950 simplex for mobile to mobile comms (aka car to car). Happy Holidays!!

You ought to check with the folks at:

http://www.iinc.com/ggcomm/

I've heard great things about the work they do. If I have a scanner
which I can't repair and it's out of warranty, I plan on sending it to
them.

I AM REALLY NOT THE KIND OF PERSON TO GO AROUND CALLING PEOPLE NAMES.
I AGREE, THE COMMENTS I HAVE MADE ARE AWFUL, VERY HUMOROUS, BUT FOR THE
MOST PART TERRIBLE. BUT I AM NOT GOING TO SAY I AM SORRY, BECAUSE I AM
NOT. THESE PEOPLE HAD THESE COMMENTS COMING TO THEM BECAUSE THEY WOULD
JUST WAIT AROUND FOR ME TO POST SOMETHING AND THEN TWIST AROUND WHAT I
MEANT, AND THEN FOR THE MOST PART HARRASS ME. AND TO BECOME SO UPSET
OVER THE USE OF CAPITAL LETTERS, WELL LIFE IS TO SHORT FOR THIS MINDLESS
NONSENCE, I BET IF THESE PEOPLE HAD TO VEIW EVERYTHING ON THERE
COMPUTERS IN CAPITAL LETTERS, MOST OF THEM WOULD COMMIT SUICIDE. WHEN I
FIRST CAME TO THIS SITE I WAS SHOCKED AT HOW IMMATURE SOME OF POSTINGS
WERE, BUT THATS FINE AT THIS POINT, BECAUSE I REFUSE TO LOWER MYSELF
DOWN TO THE LEVEL OF THESE MUTTS AGAIN. SO SAY WHATEVER YOU WANT ABOUT
ME OR ANYBODY ELSE THAT YOU CARE TO, NO MATTER HOW WRONG AND MISGUIDED
IT IS, I AM NOT GOING TO HAVE ANYTHING TO SAY ABOUT IT AT ALL.

5347. Reading FCC Sybase format

Excellent condition. Selling my Kenwood 742. I don't use 220mhz and bought another radio. This was base station. Unfortunately, no box or manual but can supply photocopy of manual if you want it. Used strictly as base. No mobile usage. About 2 1/2 years old. $800 + Fedex COD.

Also have an Astron RS-20 for $90 + Fedex COD.

The manual does not give the IF's so it's impossible to say. I'd guess they're dual conversion. For complete review see Rich Wells' radio page at htpt://www.qsl.net/n2mca

As to others "in their class" - which I define as pocket sized scanners with limited feature sets - there are only two others: the Icom IC-R1 and the Alinco DJ-X1. The WS1000/2000 are much better receivers than either of these.

IMHO comparisons with other similarly-PRICED radios like the AR-8000, IC-R10, DJ-X10, etc. are simply not valid in this context as these are are considerably larger and have more features.

I think that people are rediculous... They should know that cell and cordless telephones don't have a reasonable expectation of privacy.

The government regulates the allocation of the waves, but they should not be able to make it a crime for us to decode them with a scanner.

I'm sure that the telephone operators sit at the terminal and listen to peoples calls.

Now I don't listen to the freqs. myself, but there shouldn't be a law to prohibit the freqs. from appearing on the scanner.

(...)

get it. it's a very good non-breaking-frequency scanner. RS now
does not make any scanners that exceed RX 1.0 GHz + no breaks between
the freqs. I have one and it works great.

I think Pro2020 (? base scanner that's usually priced $569.99 200
channels I think it's cell capable by image freqs) is on sale for
$300. I may get it. It's not as good as pro-26, but it's a very
good scanner also.

I also have the same experience with my IC-R10. Here in Sweden 78 -80 MHz are used for police and rescue. However, I found out the reason for the bad reception around 80 MHz, it is the small (160 mm) antenna delivered with the unit! I performs exceptionally bad on those frequencies. I now got a commercial rubber duck antenna specially made for 70 - 80 MHz. It is 240 mm long and works just excellent!

I have the following Radio, and electronic equipment for sale. Reasonable offers will be considered. All working last time tested unless noted.

Thanks

Kenwood TS-820S - Digital Ham Transceiver 120-10 meters. Looks and works good. 100W output. $400

Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks and works good. 100W output. $250

Siltronix 1011C- 10 meter and CB AM or SSB Transceiver. Looks and works good. 250-300W PEP output on SSB. $225.

Siltronix VFO Model 80. $75

Heathkit Hw-101- Tube type Ham Transceiver/with Power Supply 80-10 meters. Receives, but does not transmit. $100.

Yaesu FRG-7 Solid State General Coverage Short wave Receiver. Looks and works Great, except the Power Switch has the tip end missing. but still working OK. $225

National Two/Seventy Ham Receiver with 6 Meters. All Tube with matching speaker $250.

Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $200.

Lafayette, Constat 25- All tube CB Transceiver. Have two. One is working the other for Parts or can be repaired. both for $ 200.

Pal, VFO- 11 meter CB $50.

Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

Sears- 10 channel Crystal Control Table top Scanner. $50
Regency- 10 channel Crystal Control Table top Scanner. Wood case $50

Realistic Pro30- Programable Hand Held 16 Channel scanner. 30-50,108-136, 138-174, 380-512 Mhz. $75

Regency HX2200- Programable Hand Held 20 Channel scanner. 118-950 Mhz including cell. coverage. $50

Craig- 6" Reel to Reel Tape Stereo Recorder. $50

AR Inc.- Stereo Amp, all solid state. $150

Heathkit- Model-AA-32 Tube Steteo Amp. $100

Channel Master- Tube Stereo Receiver (Model 6612) and matching amp (Model 6601)
Looks good and plays on FM. AM not working. $150

Bell Fax Line 1500- Fax and Phone Machine. Was working Great, but stopped
working last time I plugged in. $50.

Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 and
Tele-wide finder lense. $125

5385. NOSTALGIA: Bearcat crystals wanted

Newsgroup: rec.radio.scanner
Date: 1997-11-29 00:00:00 UTC
From: aci6@aol.com
Message-ID: <19971129201800.PAA03217@ladder01.news.aol.com>
Source record: 179089

Hello to all:

Looking for Bearcat scanner crystals. Will consider ALL frequencies. Especially need crystals for the following receive frequencies:

460.100, 460.125, 460.175, 460.200, 460.300, 460.350, 460.475, 162.55

This corresponds to CRYSTAL frequencies of 49.922222 to 49.963888 Mhz for the UHF frequencies above and 50.583333 for the 162.55 receive frequency.

These scanners use a 10.8 Mhz IF. Thus, for 460.350 the crystal frequency is 49.950000 Mhz. (Rec. Freq. minus 10.8, divided by 9 on UHF and divided by 3 on VHF Hi) and the crystals are the HC-25/U plug-in format.

Please email if you have these or know of someone who does. I may also be interested in BUYING your ELECTRA Bearcat scanner.

Thanks,

Bill

Depends on which district that it's working. Ive heard them on CHP and
fire channels.

5389. Air Traffic Control "Wash"

Newsgroup: rec.radio.scanner
Date: 1997-11-29 00:00:00 UTC
From: jsmeed@aol.com
Message-ID: <19971129213801.QAA10778@ladder01.news.aol.com>
Source record: 179093

I live in Dearborn, Mi. and am reasonably close to Detroit Metropolitan Airport's transmitters and am receiving traffic control "wash" (harmonic?) over 156.600Mhz, which is used for traffic control for commercial shipping on the Detroit River.

I am using a Bearcat SC150B handheld scanner with the standard flexible antenna. Is this problem "fixable" by using a better antenna or is it a limitation of the radio itself. I assume shipping/marine traffic wouldn't have this problem.

Thanks...
Jeff Smeed
Dearborn, Mi.

---------- ---------- ---------- ---------
Terry-

I think part of the problem is that we all assign an age to the poster, in our own mind, amounting to *at least*, whatever age it is that we consider constitutes 'minimum adulthood'. The fact is - a LOT of these flamers,(with the exception of John Mackey, of course), weren't emotionally arrested at 13 - they really *are* 13!

That's why much of the subject matter being put up lately has seemed to be nothing but purile ranting, back and forth. Thrust, parry, ad nauseum.

Top Ten Reasons Why John Mackey is the Most Loved
Personality on the Internet Today

10. Has generated more posts than Canter and Siegel.

9. Has consistently demonstrated the highest intelligence of
all the rocks on Earth.

8. Authored the definitive self-help book based on his own
true life story, "Love and Vinyl or How To Tell If Your
Blow-up Doll Is Unfaithful."

7. For his Master's thesis, wrote the highly acclaimed book,
"The Flashlight On-Off Switch, Friend or Foe."

6. Has deprived more villages of an idiot than all the people
he has called a fool.

5. Created the all time great pick-up line "Hey babe, would
you like to go to my place and see my collection of used
airline vomit bags and feminine hygiene products?"

4. Entered medical history when he became the first person
known to have his vocal chords in his sphincter.

3. He's in the Internet Hall of Infamy for telling the most
lies in a single post.

2. As the World's Only Human Toilet-Boy, Roto-Rooter gives him
the biggest professional courtesy discount.

1. Voted Most Popular Bitch of Cell Block C five years in a row.

5403. Bandercom

5414. Taking scanner to AZ

Newsgroup: rec.radio.scanner
Date: 1997-11-29 00:00:00 UTC
From: fire@SPAMMERSDIE.euronet.nl
Message-ID: <347f5fcc.1225377@news.euronet.nl>
Source record: 179127

G'day Ppl!

I'm a Dutch scanner enthousiast with a girlfriend in Arizona. I'll be visiting her over christmas, and I was planning on taking my scanner (a Yupiteru MVT-7000) along to see if I can pick some interesting stuff up while at her house in Tucson. This raised two questions with me however:

1) Is my scanner (a 0.1-1300 MHz full-band receiver) allowed by US regulations, or are there restrictions on it that could get me into trouble? I know it's completely legal here, but I heard that the US authorities are rather picky about equipment that can monitor cellular phone frequencies, is this true?

2) Can anyone give me some interesting frequencies to listen to in the US in general, and in Tucson, AZ in particular? Note that I am also an avid railway freak, so AMTRAK and similar frequencies for the aforementioned location would be greatly appreciated.

My thanks in advance!

Images can be quite clear. Technically, it is just the other side of the mixing of the control oscillator and the input. The only real difference is that the image (other side of the mixing) does not have the proper Radio Frequency amplification, therefore, it is usually weaker in strength.

5423. Interesting Radio Shack Story (was Specs for BC295XLT and BC895XLT)

Newsgroup: rec.radio.scanner
Date: 1997-11-29 00:00:00 UTC
From: Andy Ulrich <ulrich@null.net>
Message-ID: <65o3ef$qfi@bgtnsc03.worldnet.att.net>
Source record: 179136

Well, thanks for the answers. I will check out Bill Parnass' article in the Dec issue of Monitoring Times (when my local store gets it -- they get them late for some reason; yes, I know, I should subscribe).

Visited the Grove site, but it didn't give that much detail.

But my PRO-2004, which had died and prompted me to write the first post, is suddenly alive and well again. Possibly thanks to Radio Shack/Tandy. Here's the explanation:

I'm in the military, and about 2 years ago returned from Korea. The PRO-2004 came with the rest of the stuff I shipped from there back to the States -- and it didn't work. When turned on, the backlight came on and pressing keys generated the normal tones, but there was no display and no audio, even with the squelch turned all the way down.

I should have and could have had Uncle Sam pay for the damage, but the paperwork is a pain and I was lazy. So I missed that opportunity. About a month ago, I dragged out the old scanner and decided to try to get it fixed, because I missed having a base station scanner in the house.

I brought it to Radio Shack, where the dealer told me it would cost $49 labor plus any parts. I could pay either $10 or $20 up front; for $10 they'd just plain fix it and bill me for the rest upon pickup, and for $20 they'd call me from the repair center with an estimate before fixing it and give me the option of whether or not to proceed.

I went for the $20 option. Sure enough, about 2 weeks ago, I got the call. The tech (or whoever she was) told me it would be $49 labor, plus $150 parts. Apparently, the "linear board" was bad, and the power supply needed to be replaced, too.

I said no. $200 was too much just to fix an old scanner. So today I picked up the scanner from my local store where I had brought it to begin with.

Because today was an exceptionally lucky day (I brought my 80,000-mile vehicle in to a repair place for new brake pads and shoes, since I'd never done it; they pulled the tires off and told me nothing needed to be done; they rotated the tires when they put them back on; and they charged me nothing; AND Wal-Mart undercharged me $6.50 or so, which I noticed when I got home), I plugged in the scanner and turned it on, just to see what was up.

Lo and behold -- the scanner works. I'm listening to it as I write this.

So ... a few questions remain. Is there a bad connection somewhere, and the act of shipping the scanner from Korea to here and to Ft. Worth and back

disconnected and reconnected it? If so, why did Ft. Worth say I had a bad board and power supply? Did Ft. Worth accidentally fix it even though I told them not to? Seems unlikely, since my mods are still intact (although I don't know if that's the same board or not), and ... I mean, come on! Is the repair center inept or corrupt?

Anyway, it seems like $20 well-spent.

Andy Ulrich

5424. No Recieve in BC 700a

Hello to all fine scanner masters. I have a BC 700a and my recieve in 30mhz -400mhz has for some reason dropped from my rig. I have used a cordless telephone to see if the 46mhz works and it doesnt. Also I had a friend who is a ham radio operator close by transmit on 146.000 and have no recieve at all. I used to have plenty of traffic in these bands but not now. All I really have working in my radio is the 800-900mhz. Whats going on here please help me. Oh yea and I did adjust my squelch all the way down during these test and to no avail. The antenna is not the problem or the connector on the scanner on the inside. I give up.

Thanks to all reply's

Maybe they fixed it, gambling that you would approve the charges. If so,
you sure won on that deal.

Loyd:

I did, and it was easy. PerCon uses FoxPro for their database engine. FoxPro uses the *.DBF data file format, (a carry over from dBase). Just go into MS Access, tell it to import a dBase file, point the the large DBF file and away you go! If you still need help, get back to me.

Good luck,
Bill Crocker

Source record: 179146

Hey gang!
I have a Military Discone, AT-197A/GR for sale.
Solid build and heavy construction.
It is made by R.A. Miller Industries, Inc. in Grand Haven, Mich.
Their web site is: http://www.rami.com/

The antenna is good from 400 MHz to 1.3 GHz for transmit.
I used it for rec've and it worked like a champ.
Mounted in the attic, never outside.
The Disc twists off, the cone elements come out and it is easily
transportable.
The connector is a HN type connector.
I found one company that made them, bought a bunch and made up some cables.
The cables are:
1-18 foot RG-58, PL-259 on one end, HN on the other.
1-3 foot RG-58, PL-259 on one end, HN on the other.
1-3 foot RG-8, PL-259 on one end, HN on the other.
1-25 foot RG-8, PL-259 on one end, HN on the other.
There is also one HN connector for RG-8 not on a cable, still in the
package.
Also included is an right angle mount.

All this for $80.00 including shipping in the 48 US.

e-mail me at pjgreene@harborcom.net

Pete

Better be careful issuing challenges like that. You may find the
majority voting that you both leave. If you don't like reading what
somebody posts, don't read it. Killfile it, or just ignore it.

Simple concept, isn't it?

Source record: 179153

When that good natured senator and cellular industry lobbyist (you know who) demonstrated to Congress how us "electronic eavesdroppers" modify scanners to receive cellular frequencies, they chose to use the Pro-26. However, beyond replacing the CPU available from Javiation, no one has been able to replicate this amazing feat. The Pro-26 is a good buy only if you care about size. IMHO the UBC-3000XLT is a better performer with more channels, better audio, and super fast scan/search rate. How much are they selling the Pro-26 for over there in Canada? If it is $200 U.S. dollars or less, go for it.

Yes, it is quite easy. You should be alert to the fact that it takes several hours to do it. The problem is that Percon does not permit you to export frequencies on a state-by-state basis. You cannot just export into Access a single state--it's all or nothing. It's worth the trouble, however.

>You can order one from Durham Radio. Look it up with your

Yes, the UBC3000 is a terrific scanner for about $300. However, I would also check prices at Javiation (www.demon.co.uk/javiation)and other places in the UK and Europe (www.bander.com), if you want the cell-capable version. I would compare it to the Yupi MVT-7100, as well, for about the same money.

Otherwise, go to www.uniden.com's site and check on their like-new specials. The last time I checked, they sold the BC3000 for $280 +/-.

The DB32 is deaf. Don't even THINK of replacing a real antenna with one of
these.

I know it's pretty tough for Web TV to do word processing.

Hi. My name is TRouBLe MaKer. I have a ham and scanner related web site. Now, it is very easy to navigate (frames installed) !!

The contents are as follows:

- What's new ? (IC Canada Update etc., link to IC Canada's web site)

- Montreal Area Repeater Directory (including hidden illegal repeaters.) There is also a link to a page where you see all VE2 and VA2 (the province of Quebec) repeaters.

- Amateur Radio Basic Qualification Study Guide (online full version)

- General Information Sheet for Amateurs and Pros

- Amateur Radio Freqs and Countries concerned

- US Amateur Radio Exam Page

- Ham frequencies and British Columbia Frequencies

- Ham calling frequencies

- Ham license structure worldwide (Canada, US, Japan, Australia, New Zealand... and there are links that help you to obtain the Australian and New Zealanders license while you stay there !!)

- US Frequency Band Allocations (for each license)

- Amateur Radio Satellite Frequencies

- Space Station MIR Information Centre

- Amateur Radio Station Prefixes

- Royal Canadian Mounted POLICE 10 codes & International Q code list

- International Morse Code

- CB Information Desk

- International Air & Marine Frequencies

- Propagation General Information Centre

- HF Propagation PREDICTION online

- RS Scanner Info

- ADI's AT-600 Dual Band Information

- Cellular Phone Listening Centre (Cordless Phone will be
added soon !!)

- Radio Modification Centre

- VE7JPN & VA2QRU Station Equipments

It's at

http://www.radiotelephone.net/amateur/

See you there !!

It probably has to do a lot with the users who can't figure out how to
lower case their letters, or leave out the html. I notice you've
conquered both. Congrats.
Understand, that a lot of people access these ng's using very old
equipment, and have been doing so for years.....amd here comes some
"web in the box" operator, and they proceed to rock the boat.
I, for example, am in the computer field, and nothing annoys me more
than somone who doesn't know how to run their "gear".
You did a great job, however the majority of the offenders still come
from WebTV, so hence the stereotype

The DB32 from Opto is designed for near-field reception and I
believe is tuned for the 460MHz range.

#1 Send, what I believe is your BC235 antenna, back to Uniden
and have them replace it free of charge.
#2 Read my Handheld Antenna Review to pick a much better
replacement for your stock antenna

Hardly. The bandwidth of the microwave link would be at least one megahertz
and the frequency above several gigahertz.

It is an image. Images are as clear as the real thing but the receiver
is not as sensative. Lots of scanners have cell images above 1,000 Mhz.

Chip:

I had the exact same problem with my radio last month. I sent it back to EEB and it was repaired and back to me by FEDEX in 2 1/2 weeks. I also had the scout mod completed for a total of $143. Yours may not be as high because mine was banged up real good. My radio was also there during the FBI raid. I called the morning after and EEB went to great lengthes to calm my fears.

Buy a DECT cordless, such as the Siemens GIGASET. They do not encrypt the call, but they use TDMA and FDMA (time slicing + frequency hopping) and are fully digital (GMSK, ADPCM, 32kbps). As long as the attacker does not have expensive DECT test laboratory he cannot listen your conversation. Hobby people with scanners cannot lock your call. The easiest attack is at the base when the call enters the POTS phone line! There are ISDN versions, too. Even cordless phone jacks exist, for modem apps.

I have this interface installed in my computer-controlled scanner and I heartily endorse this setup to everyone! I import banks from Probe and download them into my scanner in mere minutes. I haven't timed it but it takes about 15 minutes to reprogram 1000 channels. This is easily one of the biggest bang for bucks in scannerdom.

Postage is not astronomical by any means. I have bought an AOR, Uniden and a Yupi from overseas sellers. Not only was the price of the scanner less than stateside, it included shipping. Most recently, I bought a Yupi MVT7100 for $305 with shipping from Bandercom.

Yes, there is a risk that Customs will take a particular interest in your scanner (meaning, they grab it, kiss your dough goodbye). A while ago, when it was still okay to import the AOR8000, I had it sent by UPS and wound having to pay $45 Customs duty. I have since learned that the best approach is to have canner sent via airmail instead of UPS or FedEx.

> super fast scan/search rate.

Now that you've heard from a BC3000XLT fan, you'll hear
from a PRO-26 fan(sorry Paul ;-). The PRO-26 is a nice size
compared to the BC3000 which is about the biggest handheld
available. The PRO-26 is equal in receive performance to the
BC3000 in tests I have conducted but the BC3000 is a bit more
immune to interference. Not a lot though.

Big problems I have with the BC3000 is the use of the ni-cad
and the stinking cell calls in the military aero band which
is one area I am fond of listening to. PRO-26 definitely
outperforms the BC3000 in catching signals in this region.

Other BC3000 high points are audio quality, 400 channels
and battery saver mode. For the PRO-26 there's wider freq
coverage, AA battery use, and search lockout review.

The PRO-26 was pulled from the shelves quite a while ago due
to the FCC. Don't know what the story is for availability
in Canada. And who knows when the PRO-26 successor will
arrive?

Besides, if you have a 30-day money back guarantee, what's
wrong with taking it for a test spin and seeing how you
like? Good luck!

Hi Robert,

> I like this scanner but hate the BEEP during the search mode, is there
> a way to turn it off. Are there any other key pad tricks?

Take off top cover. On the top board near the front panel (ie
keypad/display) is a large connector block CN3. The right hand lead
being pin 1 and coloured Brown.

Remove the brown lead...easier if you actually remove the complete connector
block then you can quite easily lift out the brown lead - it will then go
back in at a later date if you want.

Voila..no beep :-)

If you want to go one step further you could add a switch, say on the back
that would allow you to turn on/off the beep a little easier. Something for
a rainy afternoon :-)

Hope that helps.

Whilst Canada doesn't have "regulations" regarding cellular coverage
it seems all RS distribution in Canada comes centrally from RS in the States
so you end up having to follow their lead :-(

It would seem that the FCC revoked the approval on the PRO-26 as it was
deemed easy to modify for the receiption of cellular "images" in the 380MHz
region (see http://w5gb.nmsu.edu/kc5kto/handheld.html). Without FCC
approval it cannot be sold in the States.

It remains RS "top" handheld receiver at the moment though and is still
available outside the USA.

Hope that helps.

> coverage, AA battery use, and search lockout review.

I have to say, I have been totally pleased with my 3000XLT. The search/scan rate is phenominal. I can scan 100 MilAir freqs in 1 second. I have 5 local freqs that I listen to as well so it's nice to have. The 3000 is rugged as any scanner out there. I had my 3000 in Bosnia and loaded it in my ammo pouch, it's taken more than a few licks but is still performing like a champ. The Pro-26 looks a little more fragile. There is a problem in the cell band and it really irks me. If I'm close to a cell tower, 381.7 gets cell calls so I cannot recieve USCG Air to Grnd when I'm in the area. If your about 1/2 mile or more away from a tower, it's great. It will even out perform my 2005/OS456/Probe in MilAir. A godd antenna helps as well, I slapped a Watson TeleGainer on it and it makes a good improvement. I even like the fact that I can leave the light continuosly on. It's not documented but it can be done through a keypad trick.

So, you'll have to ask yourself if the Turbo scan and ruggedness is worth the extra $100. PRO-26's have been selling here for as low as $250 at times. The cheapest I've seen a BC3000xlt is $269 Refurbished by some place. Most
electronics places on the net are selling it for $350. A few places are lower but charge you more for shipping. Communications Electronics sold me mine for $330 but charged me an outrageous $30 for S&H so beware of CE's "lowest price". In all fairness, they were running a special that included a free extra battery pack which was nice and even with the $30 tacked on, they would have been in line with everyone else. It just bothers me that

they try to undercut with a "low" price and add a huge S&H fee. Why can't they just say it's $350 and $10 S/H? I guess thats a story for another thread.

5481. SWAP portable scanner for yacht boy 400

Newsgroup: rec.radio.scanner
Date: 1997-11-30 00:00:00 UTC
From: dragnet2@aol.com

This is a Realistic PRO-30 portable scanner. In very good condition. I am the original owner and the unit comes with the manual and a rubber duck type antenna that has a quick release mount. This unit is a 16 channel programmable receiver.The frequency coverage is 30-50Mhz Vhf Lo. 50-54Mhz. 108-136Mhz. 138-144Mhz. 144-148Mhz. 148-174Mhz. 380-450Mhz. 450-470Mhz. 470-512Mhz. This scanner receives police frequencies, Ham frequencies, Aircraft frequencies, and Government freqs. It will even receive cordless phones. This scanner also has a search feature that will search between any two frequencys. A large multi purpose liquid crystal display that shows which channels and frequencies are being scanned, monitored or programmed as well as the status of the channels. I comes with a power supply so you can plug it in the wall with no need for batteries or you can run portable with 6 AA batteries . Has new backup batteries installed. You can also run rechargeable batteries if wanted. I will trade this unit STRAIGHT ACROSS for a yacht boy 400 thats in good condition. I live in the Los Angeles area and if your close I will drive to you. Dan... dragnet2@aol.com

5482. re: Morse Code is ????

Source record: 178895

Hmmmmmm, been reading a lot about this. Also I am in the process of helping my XYL get to general. She passed the 5 without a problem. She can copy 14 most of the time. Problem is-----her hearing is not so good. The code causes strange sounds in her ear. We have tried headphones, different tones and the whole she-bang. Guess what, the code is always at the same pitch on the air though if you are tuned correctly. She has no problem with the theory, even the extra class. Oh well, another technician for ever????? I say a great loss to amateur radio there as she is a very intelligent person (of course I'm not biased, no not at all) and is interested in helping others learn. To be an elmer, but the code is fast breaking her spirit. I know of several others in the same situation. We are no longer spring chickens, and not all have had the advantage of getting their ticket at a younger age (as I did) so are having a lot of trouble with the code.

Most surprising thing is that I hear a lot of "old timers" that are speaking out against the new hams, the ones that can't get the code. Another surprising thing is this. The next time you hear this diatribe and crap on the lower bands, you all know where I mean, check some old call books, ya back before they grand fathered a lot of conditionals into general. Heee heee hee, found a lot of them duds listed in there. Now of course they are "bona fide" generals so they can speak out against others.

One thought in passing, while I have passed the code test I still find it a bit stupid to be a requirement. Kinda like having to prove that you can ride a horse to get a drivers license. You can keep code, I like to get on and tap the key myself at times. Nothing wrong with that. But we are passing a lot of very intelligent folks up that have trouble with something like the code. Or as one other ham said it, perhaps we should have a requirement to be able to copy RTTY in our heads and on paper before we are granted a license to use that mode. Or perhaps decode packet or amtor or the such. Lets grow up fellows, before the world leaves all of us behind. And oh ya, all of you ex-conditionals, Not all of you were unable to drive the 100 miles to the testing site. Many of us did from the same towns that you live in. I for one hitched a ride with another ham when I took my test. And they only came to my area once a year for testing. And it was over 110 miles away. so don't cut down the no-code technicians, I know many that have 1000 times the electronic expertise that you have. Many of you I doubt could even build a simple transmitter to use your beloved code on in the event of a disaster......

: forever and the ham community has just lost another way to communicate and
: that in turn is as bad as loosing our frequencies.

: 73, Woody
Woody, I agree with the extra mode of communication. But there is no real requirement in any testing to see if you can speak, or send a packet message, or send RTTY or AMTOR or Pactor or on and on and on. And please do not site the written exam as testing for that as there at one time were a few questions on CW transmitters and recievers too. No, do not get rid of a mode, yet please, do not force all into having to know your favorite mode either. At one time the Boy Scouts were required to learn the code also. Don't hear much about that anymore, or how about semaphore flags? I haven't seen anything of them since I left the navy in '64. Or how about sending code with a blinking lamp??? All viable means of communicating, but not really practicle for normal chatting or even passing important information in the event of a disaster. Packet works super for that as you can print directly the message in hard copy and there is no asking for a repeat on a word, or a fill. I know about that as I worked the CW traffic nets for some years in the past. Also the voice traffic nets. There were constant "fill between x and x" queries out there. Things were really slow. A couple of years ago we set up a packet network conferance bridge during a disaster drill. Hospitals, Red Cross, Sherrif, Fire the whole shebang with laptops, HTs and the such, it was a smashing hit with all of the departments. instant message passing, no repeats needed. Long lists of names passed in a minute. You couldn't have asked for more. And super portable too!!! All battery powered with a emergency powered central site. That is something that CW can't do, I know. Been there, Done that!!!!

I agree..the DB32 is borderline useless....my opto seems to work alot better with a regular rubber duckie.....mind you, I am interested in the VHF band and the DB32, I think, is geared more toward the UHF band....I don't find this very practicle...for many freqs i want to pick up are in the VHF range.

#->Thank you! I thought I was the only one out here that wasn't wasting
#->votes on the Republicats!

Nope! I'm another one!! I decided to change after this last
presidential election. Between the two that were running,
I took a very, very hard look at who all was running the
store in Congress. Talk about the "Good Ol' Boy Network?"
I'm not liberal, but the Republican party has not only lost
me, but my wife and many friends of mine as well. Someday
the "Blind-Leading-The-Blind" up there will get the picture,
but not until they have either retired or voted out of the
picture. Some days it just gets so frustrating I could almost
scream.

Warm Regards from a new Libertarian!!

Hi.

I purchased Pro-2036. It was on sale for $300 (This model is no
longer manufactured. It used to be $559.99 !!).

I would like to any mods available for this model (are there any ways
to change the freq step to 5 KHz around 800 MHz area ?? It is
possible to receive cells by using image freqs, but 12.5 KHz step
won't help).

Thanks in advance.

> prices posted here and on Javiation? price of 355 UKP.

Looks like a a good basic price but it depends what your own reference to "reasonable" is. I have dealt a couple of times with Javiation (Jonathan) and whilst I realise I am perhaps paying a little more I am happy with the knowledge I have purchased from a reputable dealer who provides good customer support and is very approachable. If I have problems I am confident they will get it sorted. I like a safety net !

A friend of mine purchased an AR8000 from Javiation and it came with a 120v wall adaptor, loaded with the US Bandplan and several other goodies including a DX board which is not available from other dealers (afaik). I think it also had a socket for the OptoScout.

> 2. The unit I'm looking at seems to be the UK "band-plan" --
> can it be changed to the USA bandplan (or other) without
> a PC interface?

You would need an interface.

I sent my radio back to EDCO for the same repairs. Although my BNC
wasn't loose I told them to check it. Overall I was pleased with their
service although the battery thing happened again and I fixed it myself.
Have them replace the part that the spring goes into on the circut board.
Have them totally replace your BNC if you have some miles on your radio.

Hi Folks:
I have an Uniden Bearcat BC-855XLT thats a couple of years old. I was wondering if there is a "mod" available for this scanner? I would like a "cell mod" as well as increase the number of freqs from 50 to 100. It seems to me I saw this info posted somewhere. Any info would be greatly appreciated!! (Because I'm not to slick with a soldering iron, any large scale drawings and/or schematics would be surely welcome!)
Many thanks in advance!
Al in Alaska
PS. Anyone know where I can find a freq list for Anchorage, Ak?

Information on the BC895XLT I/O port and data format |
From: A. Giammarino <agia@ix.netcom.com> |
Last Update: 11-30-1997:1745 hrs |
*** View with a mono-proportional font *** |
------------------------------------------------------
Cable information:

Connectors used: Female DB9
1/2 of an 8 pin DIP socket

Wiring: DB9 Socket
3---------------1
2---------------2
5---------------3

Pinout on BC895XLT is such that pins 1 & 5 and 2 & 4 are tied together. Pin 3
is GROUND. Plug the cable into a computer serial port and connect the socket
end to the radio. Make sure that whatever wiring convention you use, that the
connections depicted above are maintained (e.g. not reversed, etc...) I have
my socket end of the cable connected to the first three pins closest to the
AUX jack.

=============================================================================
Data format:

The BC895XLT communicates at 9600 baud, 8 bits, no parity, 1 stop bit. Using
a shareware scanner program I found on the internet, I monitored the raw data
between the computer and the scanner. That coupled with some guesswork yielded
the following so far:
```

Note: You will need to put the scanner in the remote mode. Press and hold the ALRT/RMT button until the radio beeps twice. Also, the scanner is case sensitive - USE UPPER CASE LETTERS.

==========

AC: Clears all memory and resets the radio.

AR: status of LINE for AUX OUT
ARN: turns LINE on
ARF: turns LINE off

CC: responds with N - meaning unknown.

CD: CTCSS search function. Causes CTCSS in display to flash. Responded with 23 when it found a PL of 146.2.
CDN: function on
CDF: function off

CS: responds CSxx; xx two digit number
CSxx: does unknown function. Hitting CS again returns xx from above.

CT: CTCSS function - works just like DELAY above.
CTN: function on
CTF: function off

DL: responds with status of DELAY function - N for on, F for off
DLN: turns DELAY on
DLF: turns DELAY off

DS: unknown, responds NG

LO: L/O (channel lockout) status
LON: lockout channel
LOF: restore channel

LL: returns 00000000 - meaning unknown.

LLffffffff: performs unknown function using ffffffff like a valid freq. Typing LL again returns the new ffffffff.

MA: reads data from current channel. Similar to above.

MAccc; ccc=channel number (e.g. 001): Puts radio to channel ccc and responds with data (e.g. C001 F04535000 TF DF LF AF RF N00). Obviously, the first two fields are the channel and frequency. TF=?; DF: DELAY status (off); LF: L/O status (off); AF=?; RF= LINE status (off); N00=reflects CS number (unk. func.)

MD: unknown command that returns (so far) either a 01 or a 17. 01 is returned after a write to a memory channel and 17 after a write through the RFnnnnnnnn command.

MUF: opens squelch
MUA: closes squelch
MUN: appears to turn on an auto-squelch ? Can't unsquelch radio manually in this mode.

PR: status of PRIORITY scan function.
PRF: sets function off
PRN: sets function on

PMccc ffffffff; ccc=channel, ffffffff=freq.; Programs channel ccc with freq.
Note there is a space (ASCII 32/20 hex/SPACEBAR) between the last c and the
first f.

QU: Status of QU (activity indicator ?)
QUN: Unknown function, causes data port to output + if receiving a signal and
- if not.
QUF: turns off QU

RI: responds with status of unknown function - N for on, F for off
RIN: turns unknown function on
RIF: turns unknown function off

RF: responds with freq. in format ffffffff only if this frequency is set by the
RFnnnnnnnn command. If the frequency is already in memory assigned to a channel
then the scanner responds NG.

RFnnnnnnnn; nnnnnnnn=freq. (e.g. 470.5875 MHz -> 04705875): Dials up the freq.
in the radio (like the VFO mode) but does not program it into channel memory.
Scanner replies OK after command.

RM: Reads mode (e.g. NFM, AM, etc.)

SB: responds with bank letter(s)
SB b: goes to/turns on bank b. Multiple letters can be used. So far, only works
after an AC command is issued.

SG: S-meter reading and frequency (e.g. S014 F04535000). No signal responds
S014 for me while a strong NOAA weather station returns S026.

SQ: responds - when squelch is closed and + when open or receiving signal.

SS: responds with END. Meaning unknown.

ST: returns 0000000 - meaning unknown.

WI: returns Wnnn Fffffffff; nnn=three digit number of unknown significance and
Fffffffff where the lower case f is the frequency. Works in MANUAL or SCAN
mode (example output: W084 F01541075).
==========
KEY functions. Just type KEYxx and carriage return; xx=number below. Acts
the same as pressing front panel buttons.

Note: Some of the KEY functions producing errors are likely because the command
is issued out of context. They probably are valid functions.

KEY00: functions SCAN button
KEY01: functions MANUAL button
KEY03: responds OK, unknown what it is doing.
KEY04: responds OK, unknown what it is doing.
KEY05: Toggles PRIORITY (same as PR)
KEY06: Toggles L/O (same as LO)

KEY07: steps up through channels (will not put radio into manual from scan)
KEY08: steps down through channels
KEY09: displays flashing error.
KEY10: Turns on WX
KEY11: unknown
KEY12: Toggles DELAY (same as DL)
KEY13: Toggles TRUNK
KEY14: Functions display dimmer
KEY15: Functions STEP button
KEY16: Toggles LINE function
KEY17: took radio off-line (activated ALRT/RMT button)
KEY18: bank letters began flashing.
KEY19: displays flashing error.
KEY20: Toggles CTCSS (same as CT)
KEY22: Toggles FREQ/CHAN
KEY23: Toggles LOCK

KEY02 & KEY21: appear to be unused.
==========
I have been successful in programming the radio by creating a text file and sending it to the scanner. I had to introduce a small delay between characters so the data wouldn't overflow the scanner. Each channel and frequency is on a separate line followed by a carriage return and line feed.

For example:

PM001 04537250
PM002 04535000
PM003 00459400
etc...
==========
If anybody finds more commands or any other pertinent information let me know. I'll update this list as I find out more. For the time being, I'm using a Windows based terminal program to control the scanner. In the near future, I'll be writing my own application with Visual Basic.

I also have 2036 which is basically the same as the Uniden BC890XLT.
There is a mod for the 890 that re-enables the cell freqs, but I
understand this mod does not work for the 2036, although the radios are
identical. Let me know if you find any mods...

When did you pay 300.00? Not trying to tick you off, but I paid 100.00 at
R/S for this radio about a year ago on close out, it didn't have a power
supply however.

Every few years (for the past 20 or so) I check the catalogs & advertisements hoping to find a radio that is both an excellent scanner AND and an excellent AM Broadcast, shortwave, and SSB receiver. Certainly it's technically possible to build such a thing.

A couple years ago I bought an AR8000 knowing that it wouldn't be great on AM/SW/SSB, but I wasn't prepared for how lousy it really turned out to be. It's a splendid scanner, but I still have only a scanner.

Can anyone recommend radios that might come close to what I'm looking for? I like handhelds, but a small "base" radio would do.

Thanks in advance.

If you are hearing distorted aircraft communications on 156.6 MHz, you
may be receiving an image. Especially if you have an SC 150, which is
only double conversion.

The best way to cure the problem would be getting a new scanner with
triple conversion.

Hi there,

I have a Ranger Communications RCI-6030 VHF-Marine rig which I want to trade for a scanner. The RCI-6030 has the following features: All USA and International channels (156-162 MHz), all 10 NOAA weather channels, 25 watts output power (full legal power), 1 watt low power, Dual Channel Watch, Instant Channel 16, Digital PLL tuning, backlit LCD display, "water tight" casing, and more. Comes with the microphone (with channel control on mic). Very good condition. This is a current production unit, not discontinued. I am looking for a portable or base/mobile scanner (preferably portable) which covers 800 MHz (not nessesarly gapless 800 MHz), and preferably also the VHF Air Band (118-136 MHz). Any number of channels will do. Anything in good condition will also do. Please email me if you have any offer. I am in the Philadelphia, PA area. Thanks.

73's,
N3ZVM <--------Ham Radio Callsign

The Cobra 910 and 912 are true ditigal phones. Digital Spread spectrum with 60 PN codes and spread over 100 channels. On a scanner they show up as nothing but noise, and that only when you are on top of one.
As for security,, it would take another Cobra phone to eaves drop, and that phone would have to be not only on the same intitial channel, but using the same PN code in sync with the target phone one was trying to hear.
Security is very good.

Icom Australia still has mine but the dealer tells me that there is,
indeed , a receive problem and that they have had several warranty
returns successfully repaired.
I have tried a variety of other antennas....some improve the VHF
receive but my other scanners also benefit from the same
treatment....the ICR10 still has inferior VHF receive.
Actually. the biggest improvement (for a portable antenna) comes from
using a telescopic whip which came with my Opto R10.
Will post if when (if) I ever get the Icom back.
Brian

Well...
If you select frequency range, then tell it to extract say 30-960 mhz
(or whatever) and select your state of choice, you have it.
It do take some time on a pentium133, but it will doo it.

Good Signals...

I like this scanner but hate the BEEP during the search mode, is there a way to turn it off. Are there any other key pad tricks?

Thanks

5546. JIL SX-200 Manual

Newsgroup: rec.radio.scanner

I want to tap into my pro-2006 audio discriminator for connection to my computer's audio card to use the "Win tone" program for decoding ctcss pl tones.
Can anyone advise the proper connection points in the scanner to do this.
Does anyone else out there use the Wintone program? info would be appriciated.
Thanks in advance

Sure it's true .There are a lot of faster way to communicate.Code is really used as a deturant against would-be-LIDS who are not serious about ham radio but just want to get their ticket and carry on CB (chicken-band)tatics on ham radio.There are how ever some real uses for the mode.I have made several QSO's with SSB and have had to switch to CW to finish it .Also it is STILL the purist form of radio communication there is .I also have the sense of acomplishment that I know something that any Joe-blow off the street doesn't know .

One thing that comes to mind about Code is a true story about a POW in Nam . He and his fellow POWs were being tortured. They were not alowed to talk so they comunicated with code by scraping and clicking rocks on the cell walls .During a requested interveiw by the Geneva Convention the NV had to send video tapes the POWs to make sure they were treated OK. On one of the tapes while the POW was saying he was treated fine, he was spelling TORTURE by blicking his eyelids.This got him freed
Bet he was glad he knew the code.
Then there was the guy who's boat was sinking.He grabbed the marine radio to yell MAYDAY but the audio was out in his mike so he started sending SOS by keying the mike on and off. It saved his life too.
Bet he was glad that he knew the code.
I have used the code to check into our local net when my voice was gone.Good thing that there were some hams that knew the code then .
You see there there is always an advantage to have an extra mode of communication but if the upcoming hams don't learn it then it will be lost forever and the ham community has just lost another way to communicate and that in turn is as bad as loosing our frequencies.

Thanks for the info Rich. I've been considering getting one of these radios, and I didn't know that they came out with a mobile version. As it is, my next one will be for use in my vehicle, whether it be a hand held or whatever. So far its been a toss up between the Relm, and a Trunk Tracker. Does Relm, or any dealers have a web site with a picture of this new radio ?
Thanks again

Yes. You must have slipped out of my killfile recently, a problem
I'll be correcting soon, I imagine.

>I do it all the time.

No you don't, or you'd never see Mackey's messages. Killfiling him is
a lot simpler than trying to make him go away. The fact is, you're no
better than he is. By responding to his posts, you're just enabling
his action, and by calling him names you stoop to his level or below
it.

Exactly. I've been killfiling just about anyone here and in other
groups that do nothing but post profane flames of other posters. It's
cut down on the noise factor a whole lot.

There are plenty of newsgroups where flaming is more or less "on
topic." I subscribe to a couple of them myself. In the tech and
hobby groups, however, there's just no reason for it. If there's a
genuine disagreement, it can certainly be discussed without gratuitous
profanity, insults, and name-calling.

Not "turn it off". But you can interrupt the BEEP line
with a SPST switch to turn it on and off.

> Are there any other key pad tricks?

No keypad tricks, period. Dozens of retrofit mods are
possible, but definitely require some getting into the scanner.

The PRO-2005 is almost identical to the earlier PRO-2004
and the later PRO-2006. And it is not all that different
from the much later PRO-2035 and PRO-2042.

What do you mean, "find a mod" and "more freq"? You
don't "find" mods and other than cellular, there are no
other "freqs" that can be put into that scanner. There
are dozens of things that can be done....but you don't
"find" 'em exactly.

Wrong Glen. If I didn't ignore John-BOY, I too would post 50+ off topic
messages a week like him.

Nor are you any better Glen. I have yet to see you do anything but pass
judgment on others on here, but your tech posts are sure hard to find,
aren't they? You also could have emailed me with your concerns but
grandstanding (like Mackey) was just too much for you to pass up wasn't
it?

Yes, I stooped to the Boy-Mackey's level. He posted a forged post, said it
was me and I called him a low life scum for doing it. WOW! Kill file me
then Glen.

The baseband audio output for the NFM mode is found at TP2
or Pin 9 of IC-2. Connect the (+) lead of a 2.2-uF tantalum
capacitor to that point. Connect the (-) lead of the cap
to the center conductor of a mini-shielded cable with the
shield grounded. Run the cable to an RCA jack mounted on
the rear of the scanner.

That will put you in business.

:MEANT, AND THEN FOR THE MOST PART HARRASS ME.

They are so mean. They can harrass you and there is nothing you can do
about it, except stop being a dickhead.

:AND TO BECOME SO UPSET
:OVER THE USE OF CAPITAL LETTERS, WELL LIFE IS TO SHORT FOR THIS MINDLESS
:NONSENCE, I BET IF THESE PEOPLE HAD TO VEIW EVERYTHING ON THERE
:COMPUTERS IN CAPITAL LETTERS, MOST OF THEM WOULD COMMIT SUICIDE.

I suppose life is TOO short for you to learn how to spell too?

:WHEN I
:FIRST CAME TO THIS SITE I WAS SHOCKED AT HOW IMMATURE SOME OF POSTINGS
:WERE, BUT THATS FINE AT THIS POINT, BECAUSE I REFUSE TO LOWER MYSELF
:DOWN TO THE LEVEL OF THESE MUTTS AGAIN.

You would have to raise your standards somewhat before you get out of
all those killfiles you are in. Are you trying to make all WebTV users
look bad?

:SO SAY WHATEVER YOU WANT ABOUT
:ME OR ANYBODY ELSE THAT YOU CARE TO, NO MATTER HOW WRONG AND MISGUIDED
:IT IS, I AM NOT GOING TO HAVE ANYTHING TO SAY ABOUT IT AT ALL.

You'll get bored and go play with your Nintendo soon.

Bye.

Barry

NO!!! **YOU** asked ME for a post by YOU, & didn't like what I
posted the first time so I gave you this one. Now you don't
like it either!! I pulled it from http://www.dejanews.com, you may
confirm authenticity if you like (be sure to look for "old" messages
& not "current"). If you didn't want it, why did YOU ASK for it???

> You forgot to include all of what I replied to John-BOY. You maybe a

Then YOU post it.

> You are more hated than Burt Fisher. "

You get that recognition. WHY is it that every newsgroup you land on
the hate & un-happiness level rises dramatically?? I see other
messages on this NG now where people are asking you to leave
& complaining about your EGO.

One again (to qoute words you have heard from other before),
"Glenn you raised your flag & no one saluted".

> You are asked, begged and pleaded with to leave this
> NG.

Then why are so many people complaining about your ego & asking
YOU to stop or leave?

> (snip) <--- that is the truthful way to do it John-BOY. Oh yea, you
> don't have a clue as to the concept of truth. Never mind.

OK, back your words Glenn. Post something that proves something I
have said is a lie or not true. Put up or shut up!!!!

> You spent your
> Thanksgiving Day on the Internet making up lies about people. Not
> surprised Liar-John-BOY. This newsgroup has seen you do it again and
> again.

OK, what lies did I make up about people? Again, put up or shut up!!

5570. Frequencies wanted for trip to US

Newsgroup: rec.radio.scanner

If you have enough time and hard drive space, you can import the whole database into Access, FileMaker, or any other database program that uses .dbf files.
While I like the Spectrum interface for its simplicity, and rapid access to certian searches, I happen to have the resources available to me to make custom searches, and keep the entire data on the hard drive, and consider the CD as an installation disc.

I prefer FileMaker, since it allows me to use the Mac or the PC (files are transparent), and it is easy to use. I have a 200 MHz PowerPC, and 10 GB of hard drives, so it is not difficult for me to keep it on the hard drive. It took a few hours to import the data to Filemaker, but I just did that before I hit the sack.

On Thu, 27 Nov 1997 06:20:11 -0800, you wrote:

:LOOK, IF YOU HAVE A PROBLEM WITH SOMETHING I HAVE SAID, FINE. BUT TO
:CALL THOUSANDS OF PEOPLE MORONS WHO HAVE NEVER COMMUNICATED WITH YOU IN
:ANY WAY OR DONE ANYTHING TO YOU IN ANY WAY JUST BECAUSE THEY USE A WEB
:TV IS VERY UNFAIR.

It's not at all unfair. You are a good example.

:AS FAR AS MY CLAIM THAT YOU CAN HEAR CELLULAR PHONE
:CALLS ON A CELL LOCKED SCANNER, WELL ITS TRUE.

Not in every case. I have a Yaesu FT-3000 which has a wide band scanning receiver with cell blocking. The cell images fall just outside the frequencies it can receive. I also have a Yaesu FT-50 which can receive cell images even though cell blocked. Shouting will not change that.

:AS FOR YOU TO BECOME SO
:UPSET OVER MY USE OF CAPITAL LETTERS ON THIS BOARD, WELL THIS JUST
:PROVES TO ME THAT YOUR LIFE IS MORE OR LESS REVOLVING AROUND THIS ACCESS
:SITE AND IT,S POSTINGS TO THE POINT THAT YOUR A COUPLE OF IMMATURE BLACK
:HEARTED OGURES.

If I knew what "BLACK HEARTED OGURES" were I might be insulted. Actually nothing comeing from a web TV site should be taken seriously enough to be insulting. Again you prove that WebTV is the home of idiots by not knowing the differance between "'" and ",".

:WHEN AND IF YOU CAN EVER ACHEIVE A HARMONY FROM WITHIN THAT WILL ALLOW
:YOUR LIVES TO BECOME EXPANSIVE ENOUGH SO THAT YOU DO,NT HAVE THE TIME TO
:SET AROUND AND DWELL ON THINGS AS MINDLESS AND UNIMPORTANT AS MY USE OF
:CAPITAL LETTERS ON THIS SITE, YOU THEN WILL BE ON YOUR WAY TOWARD
:JOINING THE HUMAN RACE.

On the other hand you could, in time, learn to become a proper part of the net sociaty. If you could learn correct use of your keyboard and change your address you could leave all this sillyness behind you.

:LOOK, BARRY, WORDS ARE NOT SOUND. WHEN YOU COMPLAIN ABOUT MY REFUSEL TO
:" TURN IT DOWN " YOU ARE SHOWING ME THAT YOU ARE a no talent joke
:WHO PLACES TO MUCH IMPORTANCE ON LESS THAN ZERO CODES OF CONDUCT LIKE
:THE USE OF CAPITAL LETTERS ON THIS SITE THAT idiots LIKE YOU MAKE INTO A
:romper room.

I see that spelling is not your strong point either. That's TOO bad.

:TAKE YOUR SLOUCH MAGGOT ASS OFF MY BACK CREEP!

I don't own an ass moron. What the hell made you think I did?

:ALSO, GET YOUR EAR PLUGS OUT, BECAUSE I WILL USE CAPITALS UNTIL YOU GO
:DEAF AND AWAY.

If you ever upgrade to an ISP you will learn that real newsreaders all
people to choose what they want to read. If you continue to be an
arsehole you will simply have no one reading you.

Barry

5578. MDT monitoring software

Newsgroup: rec.radio.scanner
Date: 1997-11-30 00:00:00 UTC
From: rbrouwer@wxs.nl
Message-ID: <34815877.204065@news.wxs.nl>
Source record: 179017

Hi, y'all,

What kind of software is there to monitor the various MDT signals, and
where can I find it?

And what kind of hardware do I need?
I have a UBC 9000 XLT, a soundblaster and a HamComm-modem.

Does the UBC9000XLT have to be modified?
How and what?

rbrouwer@wxs.nl

Groeten,

Ron
